Summary

On January 2, 2013, satellite export control reform legislation was signed into law by the president. Stakeholders seem pleased with opportunities offered by the newly passed law, but our attentions are now focused on timely and sensible implementation of the new law into actual reforms. The State and Commerce Departments are working to issue their proposed rules on Category XV/Spacecraft Systems and Associated Equipment and will be opening a public comment period before final rules are issued. This program will provide updates on the recent satellite export control reform legislation and insight on the Obama Administration's reform implementation efforts. The discussion will cover:

- FY13 NDAA Satellite Export Control Reforms
- Implementation and Next Steps
- What the Space Community Can Do Now

Panel

- **Patricia Cooper** - President, Satellite Industry Association; Chair, COMSTAC Export Controls Working Group
- **Sam Black** - Director of Policy, Satellite Industry Association

Introductory Remarks

- **Matthew Kleiman** - Chair, ABA Section of Science & Technology Law's Space Law Committee

No CLE credit will be offered for this program.
