This workshop was held at the 2019 Equal Justice Conference in Louisville, Kentucky.

Title:
How Artificial Intelligence Can Improve LegalTech

Presenters:
IV Ashton, LegalServer/Houston.ai, Chicago, IL
Abhijeet Chavan, Tyler Technologies, Los Angeles, CA
Angela Tripp, Michigan Legal Help Program, Ann Arbor, MI

Artificial Intelligence (AI) is already transforming many service professions and law is no different. While AI-related techniques and tools continue to improve at a rapid pace and become more accessible, the challenge remains in identifying how AI can be put to practical use. In this session we will present a framework for evaluating where and how AI could be implemented in legal services and present examples and case studies. We will go beyond the current hype to look at what AI can do today, what it cannot, and when it makes sense to use it. AI is very powerful technology -- too powerful to leave it to only the technologists. The legal services community needs to engage and embrace this new technology and play a part in envisioning how it can be used to take on some of challenges of improving access to justice.
How Artificial Intelligence Can Improve LegalTech

**Abstract:** Artificial Intelligence (AI) is already transforming many service professions and law is no different. While AI-related techniques and tools continue to improve at a rapid pace and become more accessible, the challenge remains in identifying how AI can be put to practical use. In this session we will present a framework for evaluating where and how AI could be implemented in legal services and present examples and case studies. We will go beyond the current hype to look at what AI can do today, what it cannot, and when it makes sense to use it. AI is very powerful technology -- too powerful to leave it to only the technologists. The legal services community needs to engage and embrace this new technology and play a part in envisioning how it can be used to take on some of challenges of improving access to justice.

**Speakers:** Abhijeet Chavan, Managing Consultant, Tyler Technologies; Angela Tripp Director, Michigan Legal Help Program; IV Ashton, President & Founder, LegalServer/Houston.ai

**Outline:**

- Introduction to AI
  - Introduce session topic and speakers
  - Explain AI basic concepts
  - Role of AI, what it could be used for
- Considerations and best practices
- Ethics of AI in Legal Services
  - Legal services-specific implications
  - Ethical Legal AI (ELAI) Legal Services Community Principles and Guideline for Due Process and Ethics in the Age of AI
  - Case studies
- Developing AI-based legal services implementations
  - Practical examples and case studies
- Questions/Discussion
