- What if I Don’t Have a Topic to Write About?
- Do I get Extra Copies of UC? Can I Republish the Article?

What is UC looking for? A dynamic, punchy, topical article focused on recent developments and/or unique perspectives about construction law and the Forum on Construction Law (FCL). We cover diverse topics concerning the complete construction process and industry. The most popular articles discuss cutting edge developments in construction, new law/regulations, and/or tips/practice oriented skills. Unique articles that provide an author’s individualized perspective on a challenging legal question, an event (war story), or a project are welcome for consideration. We also feature FCL members, focus on diversity, and promote FCL special activities.

When is UC published? UC is published three times per year: Winter, Spring, and Summer. Each edition is published roughly one month prior to FCL’s Midwinter, Annual, and Fall meetings. Submissions must be submitted to UC’s editors per the schedule below:

<table>
<thead>
<tr>
<th>No.</th>
<th>First Draft</th>
<th>Final Copy from Authors</th>

FAQs & Author Guidelines
As of August 30, 2018

How is UC published? UC is an 8-page newsletter and it is posted online. The online edition is emailed to all 6,000+ FCL members at the time the paper copy hits members’ mailboxes. The articles are distributed on FCL’s social media sites (@ABAConstruction & facebook.com/ABAConstruction) and we use the hashtag #ABAUnderConstruction or #FCLUC. We encourage authors to share their article link on their social networks / websites.

Editorial Guidelines?
• 1,000 – 1,500 words. We can accept longer articles for the online edition.
• Endnotes. Sparingly use endnotes. Bluebook citation is preferred, but be consistent with citation format. Hyperlinks are encouraged for articles because they will all be published online.
• Use headings to break up the article. Lists (e.g. Top 10 Essential Contract Clauses for Owners) can be an effective organizational mechanism.
• Images, charts, photos, and graphics are encouraged. Be creative!
• 12 pt Times New Roman. Double space. 1” margins.
• Number all pages.
• After the title the author(s) name(s) should be listed as:

  By ________ (name), _______(firm name), ______(city, state), Division __(#) (Div. name)

• Each version of an article should have a header (flush right) on every page that provides the revision date and who last revised the document. For example:

  Tom Dunn Rev. ____
  June 26, 2018

• Autofill dates should not be used in the header as that will only confuse the reviewer upon opening the document as it fills in the date of review rather than the date of the version.

• When naming the actual document in Word, also add a date and the initials of whoever last reviewed it. For example: “UC Winter 2018 – Holmes, Robotics – NJS Rev. 06_26_18.” This way we can keep straight which is the most current document.

• An excerpt “sample” is attached to show correct article formatting.
What information do I need to provide to the editors?

1. Headshot.
2. Your name, firm name, city, and state as you would like them to be listed.
3. Forum Division that you would like to be listed, if any.
4. Sign/return the ABA release form. Please contact the editors for a copy of the release.
5. A one sentence summary of your article which will be included in the FCL’s email summarizing your article. Get people to click on your article by grabbing their attention!
6. Optional: To help with our goal to increase diverse participation in the Forum, please let us know if you identify as any under-represented minority group (this includes but is not limited to those who identify as female, LGBTQ, racial/ethnic minorities, and/or those who are differently-abled).
7. Social media accounts for the authors or the authors’ employers/firms/companies. FCL has social media accounts on LinkedIn, Twitter (@ABAConstruction), Facebook (facebook.com/ABAConstruction), and YouTube. FCL will reference these social media accounts when it posts authors’ UC articles.

Email Subject Line Conventions for Organizational Purposes

It will make it much easier to search and keep track of the multitude of emails if the subject lines are descriptive and consistent.

- To save room for author and article title, the prefix for every subject line on any email should be “UC” instead of “Under Construction,” followed by the issue designation. For example – UC Winter 2018.

- For each email about a specific article, the above prefix should be followed by the last name of the lead author and an abbreviated version of the proposed title. For example, for the Holmes article on robotics it would be “Holmes, Robotics,” and the standard email subject would be “UC Winter 2018: Holmes, Robotics.”

- As there can be various issues related to each article we should add what amounts to a sub-heading to the subject line. For example: “UC Winter 2018: Holmes, Robotics – Preliminary Draft [(or Final Draft), author information, etc.].”
**FAQs & Author Guidelines**

As of August 30, 2018

---

**File Names**

- When naming the document in Word, also add a date and the initials of whoever last reviewed it. For example: “UC Winter 2018 – Holmes, Robotics – NJS Rev. 06_26_18.” This way we can keep straight which is the most current document.

**What if I don’t have a topic to write about?**

Contact UC’s editors to express your interest in writing for UC. There may be opportunities to assist with the editing or writing articles concerning a substantive topic or a membership feature.

**Do I get extra copies of UC? Can I republish the article?**

No, we do not provide additional copies to the authors, but we do post the PDF online. You are free to print extra copies of the newsletter. Requests to reproduce/republish should be sent to coa@americanbar.org. You are invited to share the link to your article on your website, social media profiles, and with your colleagues.

The Emerging Role of Robots in the Construction Industry

Nicholas K. Holmes, Esq., Devine, Millimet & Branch, PA
Manchester, NH

and

Jason Walker, Waypoint Robotics
Merrimack, NH

Division 5

Advances in the field of robotics will lead to the increased use of autonomous robots in the construction industry to improve productivity while at the same time helping alleviate the shortage of skilled labor.

Until recently, the concept of robots working in the construction industry seemed far-fetched, but the idea is rapidly becoming a reality. Unlike factories and warehouses where robots have long been in use, construction sites are a much more difficult and challenging environment.

The Construction Industry is Facing Unprecedented Challenges

There are not enough skilled construction workers to meet the demand. Expanding markets combined with a shrinking labor pool pose a real problem for the construction industry. As Ken Simonson, chief economist for the AGC, recently noted, even as firms in many parts of the country are trying to keep pace with growing demand for construction services, they “are having a hard time finding and hiring enough qualified workers as the pool of available workers remains very tight.”¹ As a result, in March 2018 248,000 jobs were left unfilled across the United States according to the Bureau of Labor Statistics.²
