ABA TASK FORCE ON REVERSING THE
SCHOOL-TO-PRISON PIPELINE*

Report, Recommendations and Preliminary Report

*The Task Force on Reversing the School-To-Prison-Pipeline is a joint project of the ABA Coalition on Racial and Ethnic Justice, Criminal Justice Section and the Council for Diversity in the Educational Pipeline
Resolution & Report

PART ONE

Coalition on Racial and Ethnic Justice, Council for Diversity in the Educational Pipeline (formerly known as the Council for Racial and Ethnic Diversity in the Educational Pipeline)
The ABA Coalition on Racial & Ethnic Justice (COREJ) would like to express our deep gratitude and sincere appreciation to the following individuals and entities:

ABA Past President Paulette Brown for her unwavering support, assistance and leadership with the issues of the school-to-prison pipeline. President Brown's commitment and dedication have helped to improve the lives of so many of our young people.

ABA Joint Task Force on Reversing the School to Prison Pipeline, leaders and past and current chairpersons of Association entities that have so graciously provided resources and staff support, former Chairperson, Justice Michael Hyman of the Coalition on Racial & Ethnic Justice; Justice Bernice Donald, former Chairperson of the Criminal Justice Section; and Kenneth Standard, former Chairperson of the Council for Racial & Ethnic Diversity in the Educational Pipeline, the Section of Litigation, and the Tort Trial & Insurance Practice Section.

Members and staff of the ABA Coalition on Racial & Ethnic Justice who so kindly dedicated their resources and volunteered their time to successfully coordinate, plan and implement Town Halls: Professor Sarah Redfield, Chair of COREJ School-to-Prison Pipeline Committee and co-author of the Preliminary Report, Kimberly Greeley, Pat Char, Patty Ferguson-Bohnee and her entire staff, Sumbal Mahmud, and Rachel Patrick, COREJ staff director.

Professor Jason P. Nance, co-author of the Preliminary Report and his research assistants Anthony Kakoyannis, Samanta Franchim, and Laura Liles at the University of Florida Levin College of Law for their outstanding commitment and hard work.

This report would not have been possible without the enthusiastic and excellent help in reviewing the draft from the student team at the University of Memphis Law Review, especially Gregory A. Wagner, Sarah Smith, and Carl Benjamin Lewis.

The many experts, speakers and participants in all of our Town Hall Forums deserve special thanks for their suggestions, recommendations, insights and continued support and assistance with the work of the Joint Task Force.

January, 2018

Leigh-Ann Buchanan
Chairperson
Coalition on Racial & Ethnic Justice
American Bar Association  
Coalition on Racial and Ethnic Justice  
Council for Racial and Ethnic Diversity in the Educational Pipeline  

Resolution  

RESOLVED, That the American Bar Association urges all federal, state, territorial and local legislative bodies and governmental agencies to:  

(a) adopt policies, legislation and initiatives designed to eliminate the school to prison pipeline whereby students of color, students with disabilities, LGBTQ (lesbian, gay, bisexual, transgender, questioning, or queer) students and other marginalized youth constituencies are disproportionately impacted by systemic inequities in education and over-discipline resulting in disparate school drop-out or “push-out” rates and juvenile justice system or prison interactions, i.e., school to prison;  

(b) adopt laws and policies supporting legal representation for students at point of exclusion from school, including suspension and expulsion;  

(c) support ongoing implicit bias training for teachers, administrators, school resource officers, police, juvenile judges, prosecutors, and lawyers and others dealing with juveniles;  

(d) require data reporting relating to school discipline, including distinctions between educator discipline and law enforcement discipline to the Office of Civil Rights;  

(e) support legislation that eliminates the use of suspensions, expulsions, and referrals to law enforcement for lower-level offenses; and  

FURTHER RESOLVED, That the American Bar Association urges state and local prosecutors’ offices, and national and state prosecutors associations to develop screening and charging policies and statements of best practices for school referred cases to juvenile courts.
In 2014, the American Bar Association (ABA) Coalition on Racial and Ethnic Justice (COREJ) turned its attention to the continuing failures in the education system where certain groups of students—for example, students of color (African-American, Hispanic, Asian and Native American) with disabilities, or LGBTQ—are disproportionately over-or incorrectly categorized in special education, are disciplined more harshly, including referral to law enforcement for minimal misbehavior, achieve at lower levels, and eventually drop or are pushed out of school, often into juvenile justice facilities and prisons—a pattern now commonly referred to as the School-to-Prison Pipeline (StPP). While this problem certainly is not new, it presented a convergence of several laws, policies, and practices where the legal community’s intervention is critical.

Joined by the ABA Pipeline Council and Criminal Justice Section, and supported by its sister ABA entities, COREJ sponsored a series of eight Town Halls across the country to investigate the issues surrounding this pipeline. The focus of these Town Halls was to 1) explore the issues as they presented themselves for various groups and various locales; 2) gather testimony on solutions that showed success, with particular focus on interventions where the legal community could be most effective in interrupting and reversing the StPP; and 3) focus on the role implicit bias plays in creating and maintaining this pipeline. This report is a result of those convenings. Also a result was the formation of a Joint Task Force among the three convening entities to provide an organizational structure to address Reversing the School-to-Prison Pipeline (RStPP):

1. To analyze the complexities surrounding the school-to-prison pipeline and identify potential solutions to reverse these negative trends, the Joint RStPP Task Force: conducted eight Town Hall meetings in various parts of the United States during which area experts and community members voiced concerns, discussed the problems, and proposed solutions; analyzed and cumulated national data from the U.S. Department of Education’s Civil Rights Data Collection and other available local data to gauge the magnitude and scope of the problems; served as a clearinghouse for information and reports relevant to the RStPP effort; examined relevant national and state laws and local school district’s policies; evaluated evidence-based policies and practices that various schools have implemented to reverse the school-to-prison pipeline.

Disproportionality refers to the difference between a group’s representation in the population at large and its over or under representation in specific areas. African-American students offer an illustration. African-American students comprised only sixteen percent of the student population during the 2011–2012 school years, but they represented thirty-two percent of students who received an in-school suspension; thirty-three percent of students who received one out-of-school suspension; forty-two percent of students who received more than one out-of-school suspension; and thirty-four percent of students who were expelled. During that same time frame, African-American students represented twenty-seven percent of the students who were referred to law enforcement, and thirty-one percent of students who were subject to a school-based arrest. In addition, although African-American children represented eighteen percent of preschool enrollment, they represented forty-eight percent of the preschool children who received more than one out-of-school suspension.

While disproportionality is most often discussed in terms of African-American boys, as the summary above suggests, the problem is not limited to this group. Operative variations and disproportionalities exist within each broad category and across geographical areas. While other groups may not have been studied as deeply, the

1. See U.S. Dep’t of Educ. Office for Civil Rights, supra note 4, at 1–6; Daniel J. Losen & Jonathan Gillespie, Opportunities Suspended: The Disparate Impact of Disciplinary Exclusion from School 6 (2012), http://civilrightsproject.ucla.edu/resources/projects/center-for-civil-rights-remedies/school-to-prison-folder/federal-reports/upcoming-ccrr-research/losen-gillespie-opportunity-suspended-2012.pdf (finding that one out of every six Black students enrolled in K–12 public schools has been so suspended at least once, but only one out of twenty White students has been suspended).

4. See, e.g., Losen & Gillespie, supra note 9, at 18-21 (reviewing disproportionality in discipline/special education by state).

5. Kimberlé Williams Crenshaw, Black Girls Matter: Pushed Out, Overpoliced, and Underprotected 7 (2015) (“[M]uch of the existing research literature excludes girls from the analysis, leading many stakeholders to infer that girls of color are not also at risk.”); Daniel Losen, Cheri Hodson, Michael A. Keith II, Katrina Morrison & Shakti Belway, Are We Closing the School Discipline Gap? 30 (2015) [hereinafter Are We Closing] (“Given the high rates and extraordinarily large gaps revealed by the intersection of race and gender, we join the call for more research into the discipline gap at these intersections, as they raise questions about the possible influence of race-specific gender bias and stereotypes.”).
disproportionalities and concerns are real for example by gender, by disability, or by age. Also significant in considering the data is the tendency of negatives of groups to compound where a student is part of more than one group, e.g., students of color who are also students with disabilities or LGBTQ students.

6. For example, disproportionality is evident in differential treatment by gender where African-American girls are more often and more severely disciplined than other girls, see, e.g., Jamilia J. Blake, Bettie Ray Butler, Chance W. Lewis & Alicia Darenbourg, Unmasking the Inequitable Discipline Experiences of Urban Black Girls: Implications for Urban Educational Stakeholders, 43 Urb. Rev. 90 (2011); Crenshaw, supra note 5, at 7 (“P]unitive disciplinary policies also negatively impact Black girls and other girls of color”); This is true further along the pipeline as well where the data shows that the proportion of female youth arrested and entering the juvenile justice system for law violations has increased from 1980-2010 across the spectrum of crimes from less to most serious.” Office of Juvenile Justice and Delinquency Prevention, Juvenile Offenders and Victims: 2014 National Report 121 (Melissa Sickmund & Charles Puzzanchera, eds. 2014), http://www.ojjdp.gov/ojstatbb/nr2014/downloads/NR2014.pdf [hereinafter OJJDP 2014 National Report]

Overview of the School-to-Prison Pipeline Problem

The school-to-prison pipeline—the metaphor encompassing the various issues in our education system that result in students leaving school and becoming involved in the criminal justice system—is one of our nation’s most formidable challenges. It arises from low expectations, low academic achievement, incorrect referral or categorization in special education, and overly harsh discipline including suspension, expulsion, referral to law enforcement, arrest, and treatment in the juvenile justice system.

While many have known about the problems associated with the school-to-prison pipeline for years, recent data from the U.S. Department of Education’s Civil Rights Data Collection (“CRDC”) now elucidate the magnitude of various disciplinary actions including referral to alternative schools suspensions, expulsions, referral to law enforcement, and arrest. According to the CRDC, during the 2011–2012 school years, schools referred approximately 260,000 students to law enforcement, and approximately 92,000 students were arrested on school property during the school day or at a school-sponsored event. Local data provide additional sobering evidence of this problem, especially in light of the substantial evidence that many of these referrals to law enforcement were for minor offenses.

12. See Nance, supra note 1 (documenting data that school-based arrests have increased in several states and in several school districts throughout the country).
student suspensions and expulsions have also dramatically increased in recent years.\textsuperscript{14} According to the CRDC, approximately 3.45 million students were suspended at least one time during the 2011–2012 school year, and approximately 130,000 were expelled from school during that same time period.\textsuperscript{15} As with referrals to law enforcement and school-based arrests, data also indicate that the majority of these suspensions and expulsions resulted from only trivial infractions of school rules or offenses, not from offenses that endangered the physical well-being of other students.\textsuperscript{16}

These disciplinary actions, are consistently harmful to young people, particularly African American youth and youth with disabilities. Students of color are disproportionately

- lower achievers and unable to read at basic or above
- damaged by lower expectations and lack of engagement
- retained in grade or excluded because of high stakes testing
- subject to more frequent and harsher punishment
- placed in alternative disciplinary schools or settings
- referred to law enforcement or subject to school-related arrest
- pushed or dropping out of school
- failing to graduate from high school
- feeling threatened at school and suffering consequences as victims

For students with disabilities, disproportionality manifests itself in similar ways, and race and ethnicity, gender, and disability compound. Students with disabilities (or those who are labeled as disabled by the school) are disproportionately

- students of color, especially in discretionary categories under the Individuals with Disabilities Education Act (IDEA)
- less likely to be academically proficient
- disciplined, and more harshly so
- retained in grade, but still dropping out or failing to graduate

\textsuperscript{15} See U.S. Dep’t of Educ. Office for Civil Rights, supra note 4.

• more likely to be placed in alternative disciplinary schools or settings or otherwise more likely to spend time out of the regular classroom, to be secluded or restrained
• referred to law enforcement or subject to school-related arrest and incarceration.

Students who are LGBTQ face similar disproportional negative treatment and are more likely victimized and blamed as victims, and, again, the negatives compound. These same differences plague the juvenile justice system where youth of color, youth with disabilities, and LGBTQ youth are typically disproportionately arrested, referred, detained (longer), charged, found delinquent (or transferred to adult court). They are disproportionately confined instead of being placed on probation or into a diversion program. And all along the way, these young people caught in the school-to-prison pipeline are less likely to have access to meaningful education to allow them to graduate from high school and prepare for higher education and work opportunities.

Bad or Worse Behavior Is Not the Explanation for Disproportionality

Disproportionate treatment of students and their overrepresentation in the negatives of our education and juvenile justice systems cannot be explained away because certain groups are more likely to be engaged in bad or delinquent behavior. According to the U.S. Department of Education’s Office of Civil Rights, discipline and other disparities are based on race and cannot be explained by more frequent or serious misbehavior by minority students. As the Department recently stated, quite emphatically and unambiguously, “in our investigations we have found cases where African-American students were disciplined more harshly and more frequently because of their race than similarly situated white students. In short, racial discrimination in school discipline is a real problem.” Substantial empirical research corroborates the U.S. Department of Education’s conclusion.

20. See, e.g., Catherine P. Bradshaw et al., Multilevel Exploration of Factors Contributing to the Overrepresentation of Black Students in Office Disciplinary Referrals, 102 J. EDUC. PSYCHOL. 508, 508 (2010) (finding that after controlling for teacher ratings of students’ behavior problems, African-American students were more likely than White students to be referred to the office for disciplinary reasons); Sean Kelly, A Crisis in Authority in Predominantly Black Schools?, 112 TCHR. C. REC. 1247, 1261–62 (2010) (examining data from teacher surveys and finding that when controlling for factors such as low achievement and poverty, that African-American students were no more disruptive than other students); Anna C. McFadden et al., A Study of Race and Gender Bias in the Punishment of Handicapped School Children, 24 URB. REV. 239, 246–47 (1992) (finding that African-American male disabled students were punished more severely than other students for the same offenses); Russell J. Skiba et al., Where Should We Intervene? Contributions of Behavior, Student, and School Characteristics to Out-of-School Suspension, in CLOSING THE SCHOOL DISCIPLINE GAP, supra note 13, at 132–133, 134 (finding that race was a strong predictor of out-of-
discipline records and students’ self-reports also show that the concerning differences and disproportionality are not simply attributable to the stigmatized group behaving “badly” relative to their peers or to socioeconomic factors. The Discipline Disparity Collaborative reports, “regardless of the method, such studies have provided little to no evidence that African-American students in the same school or district are engaging in more seriously disruptive behavior that could warrant higher rates of exclusion or punishment.”21

Exclusion and Detention Do Not Achieve Better Outcomes for Students

As some of the leading researchers in the field have concluded, high suspension rates fail to improve learning conditions.22 It perhaps goes without saying that time spent learning is among the strongest predictors of achievement.23 Results of being out of school directly disadvantage the students and the impact is likely circular and cumulative.24

Student underachievement often leads to student misbehavior in the classroom. Empirical studies confirm that it is common for low-performing students to misbehave out of frustration or embarrassment when they are unable to learn the academic material and meet grade-level expectations.25 For example, research shows that when students are retained in grade, this does not improve their subsequent

25. See Matthew P. Steinberg et al., Student and Teacher Safety in Chicago Public Schools supra note, at 46 (observing that low-performing students are less likely to be engaged in school and more likely to be frustrated and misbehave); Matthew P. Steinberg et al., What Conditions Support Safety in Urban Schools?, supra note 13, at 125 (maintaining that low-performing students are less likely to be engaged and more likely to act out).
academic achievement.\textsuperscript{26} As many educators well understand, when students begin to comprehend that the educational process is not working for them—that they will not be admitted to college, have access to a good-paying job, or enjoy a promising career—they have fewer incentives to obey school rules and take school seriously,\textsuperscript{27} leading to disciplinary exclusion, often for trivial violations of school rules.\textsuperscript{28} Student misbehavior and discipline often lead to student underachievement,\textsuperscript{29} in a “downward spiral of academic failure, disengagement from school, and antisocial behaviors.”\textsuperscript{30} Analyzing longitudinal data from Florida, scholars Robert Balfanz, Vaughan Byrnes, and Joanna Hornig Fox found that the odds of a student dropping out of school increased from sixteen percent to thirty-two percent the first time that a student was suspended in the ninth grade and increased each additional time that student was suspended.\textsuperscript{31} Further, when controlling for other factors such as student demographics, attendance, and course performance, they found that each suspension decreased the odds that a student would graduate from high school by twenty percent and decreased the odds of a student attending a postsecondary institution by twelve percent.\textsuperscript{32} Similarly, analyzing longitudinal data from Texas, scholar Miner P. Marchbanks III and his colleagues discovered that when a student received some type of exclusionary discipline, including an in-school suspension, out-of-school suspension, expulsion, a disciplinary alternative placement, or a juvenile justice placement, that student was 23.5 percent more likely to drop out of school after accounting for other salient factors. Marchbanks claimed that even this was a

Noguera, Schools, Prisons, and Social Implications of Punishment: Rethinking Disciplinary Practices, 42 Theory into prac. 341, 342 (2003).

\textsuperscript{28} See Am. Bar Ass’n Juvenile Justice Com’n, supra note 9, at 2; Action for Children, supra note 6, at 9–10. (“Students were most commonly referred to the juvenile justice system for low-level offenses.”).

\textsuperscript{29} Elizabeth Glennie et al., Addition by Subtraction: The Relation Between Dropout Rates and School-Level Academic Achievement, Teachers College Record (2012), (“[T]he question of the role of school-level academic achievement in understanding dropout rates ... [and] more evidence of a negative side of the quest for improved academic performance. When dropout rates increase, the performance composites in subsequent years increase.”).

\textsuperscript{31} See, e.g., Robert Balfanz, Vaughan Byrnes & Joanna Hornig Fox, Sent Home and Put Off Track, in Closing the School Discipline Gap, supra note 13, at 22 (finding that in a longitudinal study of 181,897 Florida students, after controlling for student demographics and other indicators that a student is not on track to graduating, that each suspension decreases the odds that a student will graduate by twenty percent); Are We Closing, supra note, at 4.

\textsuperscript{32} Balfanz, et al., supra note 62, at 22.
conservative measure, and that “[w]hen a student was suspended or expelled, his or her likelihood of being involved in the juvenile justice system the subsequent year increased significantly.” And once students so disciplined they are significantly more likely to find themselves moving further along the pipeline toward prison. Once involved with the juvenile justice concerning results continue. At the prison end of the pipeline educational opportunity is severely limited in most states.

Nor do schools with high levels of exclusionary discipline attain a higher level of academic achievement for the school as a whole: “Perhaps more important, recent research indicates a negative relationship between the use of school suspension and expulsion and school-wide academic achievement, even when controlling for demographics such as socioeconomic status.” What is more “when harsh exclusionary policies are discontinued in schools, referrals to juvenile correctional facilities also decrease.”

Once in the juvenile justice system and prison part of the pipeline, the results are the same. Detention does not accomplish one of its primary objectives, which is to deter criminal behavior. In a comprehensive meta-analysis examining 7,304 juveniles across twenty-nine studies over a thirty-five year period, scholars Anthony Petrosino, Carolyn Turpin-Petrosino, and Sarah Guckenburg found that juvenile justice processing did not effectively deter delinquency; instead, it actually increased delinquency and future involvement in the justice system. In short, the research

35. Anne M. Hobbs, Timbre Lee Wulf-Ludden & Jenna Strawhun, Assessing Youth Early in the Juvenile Justice System, 3 J. OF YOUTH JUST. 80, 81 (2013) (“Research confirms that the practice of detaining juveniles for relatively low-level offenses is both ineffective and detrimental. . . . Early Assessment . . . appears to reduce recidivism . . . .”).
overwhelmingly demonstrates that the “official processing of a juvenile law violation may be the least effective means of rehabilitating juvenile offenders.”

Nor Do Exclusive Measures Create Safer Schools

The negative disproportionalities might be understood if indeed removals from school were in fact making schools safer, or, if indeed, confinement in juvenile detention or other facilities led to improved outcomes. This does not appear to be the case in practice or in theory. As researchers Dan Losen and Russell Skiba summarize, “There is no evidence that frequent reliance on removing misbehaving students improves school safety or student behavior.” In school situations, many removals are for behaviors that do not invoke real safety concerns; the vast majority of suspensions—95% of the 3.3 million children suspended from school each year—are for nonviolent offenses such as violating the dress code or “disruptive” behavior. As researcher Daniel Losen summarizes: “Contrary to popular belief, most suspensions are not for guns, drugs or violence. . . . Accordingly, the high rates of disciplinary removal from school currently seen in American schools cannot reasonably be attributed to the necessary responses to unlawful or dangerous misbehavior.”

The Role of Implicit Bias and Related Unconscious Associations/Decisions

A particularly alarming aspect of the school-to-prison pipeline is that certain groups of students, especially minority students, are disproportionately affected. At each juncture of the pipeline—from failing to receive a quality education, failing to graduate, being suspended or expelled, or being referred to law enforcement

45. Daniel J. Losen, supra note 41, at 8; see also Are We Closing, supra note at 10-11.
for violating a school rule and then on into the juvenile justice system—there are differences along group lines that are not readily explicable. The differences and disproportionalities discussed in this report are so well-documented, so large, and so well known that one must question why the pattern has not yielded to change.

As many researchers now agree, a primary cause of differential treatment is the implicit bias of decision makers. Explicit bias is a preference deliberately generated and consciously experienced as one’s own; implicit bias is an association or preference that is unconscious and experienced without awareness. Implicit biases may well be dissociated from what we actively and honestly believe.

46. See, e.g., McIntosh, Girvan, Horner & Smolkowski, supra note 28, at 6 (explaining that conscious or unconscious bias is an important factor in the discipline gap); L. Song Richardson, Police Efficiency and the Fourth Amendment, 87 IND. L.J. 1143, 1146-47 (2012) (explaining that individuals have nonconscious reactions to others that negatively influences their decisions and behaviors to those individuals); see also Cynthia Lee, Making Race Salient: Trayvon Martin and Implicit Bias in a Not Yet Post-Racial Society, 91 N.C. L. REV. 1555, 1570 (2013) (“Despite our largely egalitarian attitudes and beliefs, social science research over the past decade has shown that a majority of Americans are implicitly biased against Blacks.”).

47. See Jerry Kang, Nat’l Ctr. for State Courts, Implicit Bias: A Primer for Courts (2009); see also generally Neuroscience of Prejudice and Intergroup Relations 175 (Belle Derks, Daan Scheepers & Naomi Ellemers eds., 2013) (“Stereotypes are cognitive structures stored in memory that represent attributes associated with a social group.”) (citation omitted). We use the implicit bias/association vocabulary here, but the vocabulary describing the brain’s dual response mechanisms does vary.

Summary of Implicit Bias Research

The following summary of concepts of implicit bias research suggests how an understanding of implicit bias and its implications might offer a new approach for understanding and decreasing disproportionality in education and juvenile justice decisions:

- Implicit biases are measurable by social psychology and neuroimaging.\textsuperscript{49}
- Implicit biases are “pervasive.”\textsuperscript{50}
- Implicit biases are different from what we self-report.\textsuperscript{51}
- IAT results show high levels of implicit bias against the disabled (76% of the sample show a pro-abled implicit preference, 9% pro-disabled).\textsuperscript{52}
- IAT results show high levels of implicit bias against African Americans (70% of the sample show a pro-white implicit preference, 12% pro-African American) and against persons with disabilities\textsuperscript{53}
- Implicit biases are sensitive to being primed.\textsuperscript{54}

\textsuperscript{49} See supra note.
\textsuperscript{50} PROJECT IMPLICIT, supra note 337.
\textsuperscript{52} Disability IAT Results: Feedback, PROJECT IMPLICIT, https://implicit.harvard.edu/implicit/ (last visited Jan. 14, 2016). While research concerning implicit bias in favor of the abled and against the disabled is less developed than the research on race, this is one of the strongest and widely held of biases. See Nosek et al., supra note 339, at 36; see also Mark E. Archambault et al., Utilizing Implicit Association Testing to Promote Awareness of Biases Regarding Age and Disability, 19 J. PHYSICIAN ASSISTANT EDUC. 20 (2008) (discussing health care providers and suggesting a link between implicit bias and clinical decision making including IAT results for medical students biased toward abled).
\textsuperscript{53} Black-White IAT Results: Feedback, PROJECT IMPLICIT, https://implicit.harvard.edu/implicit/Study;jsessionid=8760807050217DD039F6B457199FA0A6.dev2?tid=0 (last visited Jan. 14, 2016). The remaining percent score shows preference in neither direction. The bias is more dominant in White test takers, but some Blacks also show pro-White results, though in a more nuanced way. Project Implicit reports that “Data collected from this website consistently reveal approximately even numbers of Black respondents showing a pro-White bias as show a pro-Black bias. Part of this might be understood as Black respondents experiencing the similar negative associations about their group from experience in their cultural environments, and also experiencing competing positive associations about their group based on their own group membership and that of close relations
Implicit biases may “become activated automatically, without a person’s awareness or intention, and can meaningfully influence people’s evaluations and judgments.”

Implicit biases are often dissociated from what a person actively and honestly believes or endorses.

But are not necessarily dissociated from—indeed often predictive of—explicit action or decisions.

Implicit bias may cause some youth to seem more threatening than others.

Implicit biases are more prevalent in ambiguous situations.

Implicit biases can cause anxiety.

Implicit biases can cause misremembering.

Implicit bias reduces student academic performance.

---

New Response to the School-to-Prison Pipeline: A Focus on Implicit Bias

It is easy to conceptualize how a White female educator or decision-maker, facing a decision involving disciplining a twelve year old African-American boy who was involved in a shoving incident finds herself in a context where race has been shown to matter (at least implicitly). That white educator is more likely to implicitly respond negatively to him (than to a similarly situated White boy), based on implicit associations and group identification. If she is in a poor, urban school with a majority of students of color, there are more likely to be School Resource Officers present. She may be more likely to call for help from the SRO than to send the boy to the principal’s office or some lesser intervention. When the SRO arrives he/she is likely to view the scene less favorably than he/she might for a white student, especially if the teacher labels the offender as a troublemaker. As the incident proceeds along, it is also easy to see how misremembering might come into play and the behavior of the Black boy remembered as more aggressive. And these first decisions will carry on along the pipeline, where this young student will more likely find himself arrested and detained.

When these implicit dynamics are viewed in the context of the tremendous discretion at play along the pipeline, in decisions like this one and in so many others, including discretionary special education decisions, discretionary referral to law enforcement, discretionary arrest and detention, the critical role of the decision maker is obvious. As one of the recent supplementary papers issued by the Disparity Collaborative summarizes:

[T]here is clear evidence that children of color are punished more severely than White children for relatively minor, subjective offenses in schools.

That is, what we know about implicit associations and biases call for a pause in the process. Not every decision is one that calls for a stare not a blink, but some are. That the decision maker needs to be deciding without bias, explicit or implicit, is also critical. In its recent report on Reforming Juvenile Justice, the National Academies of Science highlighted the importance of addressing bias in discretionary decisions.

64. Michael J. Bernstein, Steven G. Young & Kurt Hugenberg, The Cross-Category Effect: Mere Social Categorization Is Sufficient to Elicit an Own-Group Bias in Face Recognition, 18 PSYCHOLOGICAL SCI. 706, 706, 710 (2007); see also, e.g., HANDBOOK OF SOCIAL PSYCHOLOGY (Susan T. Fiske, Daniel T. Gilbert & Gardner Lindzey eds., 5th ed. 2010).

65. See, e.g., Yael Granot et al., supra note 393, at 2196 (finding that where study participants “fixated frequently on outgroup targets, prior identification influenced punishment decisions”).

66. See supra note 58.

decision making for juvenile justice, though their conclusion is equally important to decisions further back on the school-to-prison pipeline: “juvenile justice officials should embrace activities designed to increase awareness of unconscious biases and to counteract them, as well as to detect and respond to overt instances of discrimination.”

Preface

In 2014, the American Bar Association (ABA) Coalition on Racial and Ethnic Justice (COREJ) turned its attention to the continuing failures in the education system where certain groups of students—for example, students of color, with disabilities, or LGBTQ—are disproportionately over- or incorrectly categorized in special education, are disciplined more harshly, including referral to law enforcement for minimal misbehavior, achieve at lower levels, and eventually drop or are pushed out of school, often into juvenile justice facilities and prisons—a pattern now commonly referred to as the School-to-Prison Pipeline (StPP). While this problem certainly is not new, it presented a convergence of several laws, policies, and practices where the legal community’s intervention is critical.

Joined by the ABA Pipeline Council and Criminal Justice Section, and supported by its sister ABA entities, COREJ sponsored a series of eight Town Halls across the country to investigate the issues surrounding this pipeline. The focus of these Town Halls was to 1) explore the issues as they presented themselves for various groups and various locales; 2) gather testimony on solutions that showed success, with particular focus on interventions where the legal community could be most effective in interrupting and reversing the StPP; and 3) draw attention to the role implicit bias plays in creating and maintaining this pipeline. This report is a result of those convenings. Also a result was the formation of a Joint Task Force among the three convening entities to provide an organizational structure to address Reversing the School-to-Prison Pipeline (RStPP)

To analyze the complexities surrounding the school-to-prison pipeline and identify potential solutions to reverse these negative trends, the Joint RStPP Task Force:

1. Organized and conducted eight Town Hall meetings in various parts of the United States during which several area experts and community members voiced concerns, discussed the problems, and proposed solutions.
2. Analyzed and cumulated national data from the U.S. Department of Education’s Civil Rights Data Collection and other available local data to gauge the magnitude and scope of the problems.
3. Served as a clearinghouse for information and reports relevant to the RStPP effort and disseminated that information.
4. Examined national and state laws and local school district’s policies and practices that have combined to push an increasing number of students out of school and into the justice system.
5. Analyzed laws that several states have enacted to reverse the school-to-prison pipeline.
6. Evaluated evidence-based policies and practices that various schools have implemented to reverse the school-to-prison pipeline.
7. Organized and conducted a roundtable discussion to focus exclusively on mapping out solutions to reverse these negative trends by identifying model programs and successful strategies.

8. Planned for two additional Town Halls focused on LGBTQ (San Diego) and entry points to the pipeline and juvenile justice (Memphis).

9. Drafted this preliminary Report and prepared recommendations for consideration by the larger ABA.
Joint Task Force on Reversing the School-to-Prison Pipeline (RStPP)

Founding Task Force Members
Dawn Sturdevant Baum, Senior Attorney Department of the Interior, Indian Education Team Leader, Division of Indian Affairs, Office of the Solicitor (Jointly Appointed)

April Frazier-Camara, Special Assistant, Juvenile Defense Unit at Shelby County Public Defender (CJS appointee)

Miguel Pozo, Lowenstein Sandler LLP, immediate past President HNBA (COREJ appointee)*

Sarah E. Redfield, Professor of Law Emerita, UNH (COREJ appointee)

Matthew F. Redle, County and Prosecuting Attorney, Sheridan County, Wyoming (CJS appointee)

Wesley Sunu, Attorney, Sentry Insurance (Pipeline Council appointee)**

Artika R. Tyner, Assistant Professor (Public Policy/Leadership), University of Saint Thomas, College of Education, Leadership & Counseling (Pipeline Council appointee)

*Replaced by Salvador A. Dominguez, Assistant U.S. Attorney, Columbus, OH

**Replaced by Diana Sen, Northeast Region Director at Office of Federal Contract Compliance Programs (OFCCP)

Advisory Committee Members
Advisory Committee members will be drawn from relevant disciplines and organizations.

ABA Entity Founding Support
Center for Children and the Law Commission on Youth at Risk

Section of Litigation Children’s Rights Litigation Committee Commission on Disability Rights

Commission on Hispanic Legal Rights & Responsibilities
Task Force Reporter
Jason P. Nance, Associate Professor of Law, Associate Director of Education Law and Policy, University of Florida Levin College of Law
The school-to-prison pipeline—the metaphor encompassing the various issues in our education system that result in students leaving school and becoming involved in the criminal justice system—is one of our nation’s most formidable challenges. It arises from low expectations and engagement, poor or lacking school relationships, low academic achievement, incorrect referral or categorization in special education, and overly harsh discipline including suspension, expulsion, referral to law enforcement, arrest, and treatment in the juvenile justice system.

The Joint Task Force on Reversing the School-to-Prison Pipeline has addressed itself to issues of that pipeline by cumulating and analyzing the national and regional data as well as federal, state, and local law and policy. In 2014-15, the Joint Task Force conducted eight Town Hall meetings to serve as a clearinghouse for information and reports relevant to the RStPP effort and a forum for understanding and evaluating evidence-based policies and practices that various schools and other institutions have implemented to reverse the school-to-prison pipeline. The Task Force has also conducted expert and roundtable discussions to map solutions to reverse these negative trends by identifying model programs and successful strategies.

While many have known about the problems associated with the school-to-prison pipeline for years, recent data from the U.S. Department of Education’s Civil Rights Data Collection now elucidate their magnitude and that magnitude is unacceptably large and out of proportion to the population of our young people. This disproportionality manifests itself all along the educational pipeline from preschool to juvenile justice and even to adult prison for students of color, for students with disabilities, for LGBTQ students, and for other groups in particular settings. These students are poorly served at every juncture.

Students of color are disproportionately

- lower achievers and unable to read at basic or above
- damaged by lower expectations and lack of engagement
- retained in grade or excluded because of high stakes testing
- subject to more frequent and harsher punishment
- placed in alternative disciplinary schools or settings
- referred to law enforcement or subject to school-related arrest
- pushed or dropping out of school
- failing to graduate from high school
- feel threatened at school and suffer consequences as victims
For students with disabilities, disproportionality manifests itself in similar ways, and race and ethnicity, gender, and disability compound. Students with disabilities (or those who are labeled as disabled by the school) are disproportionately

- students of color, especially in discretionary categories under the Individuals with Disabilities Education Act (IDEA)
- less likely to be academically proficient
- disciplined, and more harshly so
- retained in grade, but still dropping out or failing to graduate
- more likely to be placed in alternative disciplinary schools or settings
- or otherwise more likely to spend time out of the regular classroom, to be secluded or restrained
- referred to law enforcement or subject to school-related arrest and incarceration.

Students who are LGBTQ face similar disproportional negative treatment and are more likely victimized and blamed as victims, and, again, the negatives compound.

These same differences plague the juvenile justice system where youth of color, youth with disabilities, and LGBTQ youth are typically disproportionately arrested, referred, detained (longer), charged, found delinquent (or transferred to adult court). They are disproportionately confined instead of being placed on probation or into a diversion program. And all along the way, these young people caught in the school-to-prison pipeline are less likely to have access to meaningful education to allow them to graduate from high school and prepare for higher education and work opportunities.

**Figure 1. Juveniles Detained & Placed by Race & Ethnicity**

These negative disproportionalities might be understood if removals from school were in fact making schools safer or if confinement in juvenile detention or other facilities led to improved outcomes. This does not appear to be the case in practice
or in theory. Nor can the disproportionate treatment of certain students and their overrepresentation in the negatives of our education and juvenile justice systems be explained away because certain groups are more likely to be engaged in bad or delinquent behavior.

The causes of the school-to-prison pipeline are many, complex, and interrelated. These include criminalization of school discipline and the increased presence of law enforcement officers in schools. Throughout these causes runs evidence of implicitly biased discretionary decisions, which, unintentionally, bring about these results.
Recommendations

The school-to-prison pipeline is a complex problem with no easy or simple solutions. At their core, solutions should focus on ways to (a) improve academic achievement and increase the likelihood that students will remain in school, graduate, and prepare to become positive, contributing members of our society, (b) decrease the number of suspensions, expulsions, and referrals to law enforcement; and (c) decrease disparities along racial and other lines relating to discipline and academic achievement. While completely dismantling the school-to-prison pipeline is a task that our entire nation must take on, there are affirmative steps that the American Bar Association is well positioned to take to reverse these negative trends.

Based on its national investigation, including the information gathered at the national Town Hall meetings and roundtable discussions and the extensive review of the current research, the Task Force recommends that the ABA take steps to:

ABA and Partners: Convenings and Training

1. Adopt ABA policy and specific resolutions as appropriate to implement these recommendations
2. Join with other partners to continue additional of Town Halls discussing solutions and offering training on implementation
3. Support legal representation for students at point of exclusion from school, including development of model best practice training modules for lawyers and law students for representation for students facing suspension or expulsion
4. Support ongoing convenings where educators, School Resource Officers, law enforcement, and juvenile justice decision makers join together to develop strategies to reverse the School-to-Prison Pipeline
5. Develop training modules for training of SROs and police dealing with youth on appropriate strategies for LGBTQ students and students with disabilities
6. Develop training modules on Implicit Bias and De-Biasing for decision makers along the StPP including teachers and administrators, school resource officers, police, juvenile judges and others dealing with juveniles, to reduce disproportionalities
7. Encourage its members to continue engagement in youth mentoring initiatives
8. Support related legislative and policy initiatives

Legislation and Policy

9. Remove zero-tolerance policies from schools
10. Support legislation eliminating criminalizing student misbehavior that does not endanger others
11. Support legislation eliminating the use of suspensions, expulsions, and referrals to law enforcement for lower-level offenses
12. Support demonstrated alternative strategies to address student misbehavior, including Restorative Justice
13. Provide model policy and support school policy and agreements that clarify the distinction between educator discipline and law enforcement discipline
14. Provide appropriate training for School Resource Officers
15. Identify funding and provide safe harbor for participants in evaluative research on implicit bias and de-biasing training
16. Provide for continued and more detailed data reporting relating to school discipline and juvenile detention and disproportionality
Overview of the School-to-Prison Pipeline Problem

Introduction

A sheriff’s deputy summoned to handle four-year old elementary student with ADHD, admittedly having a temper tantrum, handcuffs the boy. When his mother arrives at the school she learns that he has already been taken to the sheriff’s office where handcuffs have been replaced with shackles. The mother says that her son “deserves to go to school and feel safe and know that he’ll come back home to his mommy. He won’t be carted off like a criminal.”

But it seems that this child and far too many more of our young people will indeed be carted off like a criminal.

The school-to-prison pipeline—the metaphor encompassing the various issues in our education system that result in students leaving school and becoming involved in the criminal justice system—is one of our nation’s most formidable challenges.

It arises from low expectations, low academic achievement, incorrect referral or categorization in special education, and overly harsh discipline including suspension, expulsion, referral to law enforcement, arrest, and treatment in the juvenile justice system.

While many have known about the problems associated with the school-to-prison pipeline for years, recent data from the U.S. Department of Education’s Civil Rights Data Collection (“CRDC”) now elucidate their magnitude. According to the CRDC, during the 2011–2012 school year, schools referred approximately 260,000 students to law enforcement, and approximately 92,000 students were arrested on school property during the school day or at a school-sponsored event. Local data provide additional sobering evidence of this problem, especially in light of the substantial evidence that many of these referrals to law enforcement were for minor offenses.

The number of student suspensions and expulsions have also dramatically increased in recent years. According to the CRDC, approximately 3.45 million students were suspended at least one time during the 2011–2012 school year, and approximately 130,000 were expelled from school during that same time period. As with referrals to law enforcement and school-based arrests, data also indicate that the majority of these suspensions and expulsions resulted from only trivial infractions of school rules or offenses, not from offenses that endangered the physical well-being of other students. Numbers are similar for those detained in the juvenile justice system.
The Context

This report discusses data and issues that cause and maintain the school-to-prison pipeline. Some general aspects of the issue offer a frame for the particular, and go a long way toward explaining the way young people enter and remain in the pipeline. These overarching topics are reviewed here to provide context and developed further in later sections. Concepts discussed include the meaning of disproportionality; differences in relationships and expectations as they relate to the exercise of discretion. Also of particular significance is the research that debunks two common misperceptions and demonstrates instead that the disproportionalities along the school-to-prison pipeline are not simply attributable to bad (worse) behavior of certain groups and that excluding students from their regular school setting and/or detaining them in juvenile or other facilities does not necessarily contribute to either a safer or better environment or to more successful outcomes for those students.
The Meaning of Disproportionality

Disproportionality refers to the difference between a group’s representation in the population at large and its over or under representation in specific areas. African-American students offer an illustration, which is expanded with additional data throughout the report.

Figure 4. Disproportionality Illustrated

African-American students comprised only sixteen percent of the student population during the 2011–2012 school year, but they represented thirty-two percent of students who received an in-school suspension; thirty-three percent of students who received one out-of-school suspension; forty-two percent of students who received more than one out-of-school suspension; and thirty-four percent of students who were expelled. During that same time frame, African-American students represented twenty-seven percent of the students who were referred to law enforcement, and thirty-one percent of students who were subject to a school-based arrest. In addition, although African-American children represented eighteen percent of preschool enrollment, they represented forty-eight percent of the preschool children who received more than one out-of-school suspension.
While disproportionality is most often discussed in terms of Black boys, the problem is not limited to this group. Operative variations and disproportionalities exist within each broad category and across geographical areas. While other groups may not have been studied as deeply, the disproportionalities and concerns are real. For example, disproportionality is evident in differential treatment by gender where African-American girls are more often and more severely disciplined than other girls, most often, for “subjectively defined behaviors, or behaviors considered inappropriate by educators.” This is true further along the pipeline as well where the data shows that the proportion of female youth arrested and entering the juvenile justice system for law violations has increased from 1980-2010 across the spectrum of crimes from less to most serious.

Also significant in considering the data is the tendency of negatives of groups to compound where a student is part of more than one group, e.g., students of color who are also students with disabilities or LGBTQ students.
Differences in relationships and expectations relate to the exercise of discretion, and both can be damning.

Relationships are one of the most significant factors in student learning; where those relationships are lacking or based on low expectations, learning will be damaged. Differences in expectations and engagement influence teaching and learning; they influence the quality of instruction, and the feedback students receive. The so-called Pygmalion effect—a self-fulfilling prophecy or expectation effect where when teachers expect good performance they get it and vice versa—has long been known in education. Such self-fulfilling expectations, together with related depletion, can be a primary cause for racial disparities relating to academic achievement and subsequent pipeline events.

Figure 8. Importance of Expectation
Where labeling of young people is virtually omnipresent—Limited English Proficiency, emotionally disturbed, intellectually disabled, troubled, trouble-maker, noncompliant, insubordinate, delinquent, from a bad family—decisions and actions flow from these labels and expectations they engender among both educators and students. A recent study of school personnel found that less than one-third of teachers believe that schools should expect all students to meet high academic standards; and most do not believe that at risk students would respond to these high expectations and work harder. As a study of teachers and administrators on this particular point found, strong and high-level expectations often remain least present where they are most needed, leading one education expert to observe: “The biggest resistance to improving high schools is a deep-seated belief that many of our students cannot learn much. We’ve created a system that allows them to validate that . . . .”

Researchers have empirically demonstrated that teachers with negative attitudes towards ethnic minorities viewed those students as less intelligent and less capable of obtaining promising post-career prospects; and student achievement differences between ethnic minority students and other students were larger in classrooms with prejudiced teachers than with teachers who held less prejudicial attitudes.

In such a system, the exercise of discretion is critical. Discretionary decisions place students in tracks or locations where those identified as “low-performing students” go to low level, unchallenging classes. Discretionary decisions place students disproportionately in certain special education categories. This foreshadows, or perhaps reflects, the related finding that many students “expressed sadness that they were not challenged more and that the classes and teachers were not inspiring.” Estimates place the impact of such negative teacher perceptions at “almost 3 times as great for African Americans as for whites,” larger for poor and female students, and “cumulative across disadvantages or stigmas.”

Discretionary decisions also determine if a parent is called or a student is sent to the office, or referred to law enforcement. These decisions are often made without basis in fact; as the researchers reviewing school discipline in Texas put it:

Instead, the determining factor is how teachers and administrators interpret and apply these codes of conduct. What behaviors, for example, amount to “classroom disruption”? Should a student immediately be removed from the classroom for any sign of it, and, if so, which of the various possible consequences listed in the code of conduct should be imposed? How school administrators interpret these codes, and their responses to violations, varies enormously.

And discretion shows in the results. In the Texas discipline data, African-American and Hispanic children have been found to be “slightly” more likely to be sent to the office and “substantially” more likely to be suspended or expelled. Even when sent to the office, there are differences in the kind of triggering behavior—for African-American students, the more subjective “disrespect, excessive noise, threat, and loitering” and White students, the more objective “smoking, leaving without permission, vandalism, and obscene language.” Harsher treatment also occurs for relatively minor “offenses,” again, disproportionately so: “suspensions frequently occur in the absence of any physical violence or blatant verbal abuse . . . .”
Discretionary decisions will also determine if a student is arrested, detained or diverted.51

Bad or worse behavior is not the explanation for disproportionality.

Disproportionate treatment of students and their overrepresentation in the negatives of our education and juvenile justice systems cannot be explained away because certain groups are more likely to be engaged in bad or delinquent behavior.52 According to the U.S. Department of Education’s Office of Civil Rights, discipline and other disparities are based on race and cannot be explained by more frequent or serious misbehavior by minority students.53 As the Department recently stated, quite emphatically and unambiguously, “in our investigations we have found cases where African-American students were disciplined more harshly and more frequently because of their race than similarly situated white students. In short, racial discrimination in school discipline is a real problem.”54

Substantial empirical research corroborates the U.S. Department of Education’s conclusion.55 School discipline records and students’ self-reports also show that the concerning differences and disproportionality are not simply attributable to the stigmatized group behaving “badly” relative to their peers or to socioeconomic factors.56 The Discipline Disparity Collaborative reports:

The crux of the matter then, is whether African American students engage in more seriously disruptive behavior that could justify different rates and severity of consequences. A number of different methods have been used to test the idea that differential punishment is due to different rates of misbehavior. Regardless of the method, such studies have provided little to no evidence that African American students in the same school or district are engaging in more seriously disruptive behavior that could warrant higher rates of exclusion or punishment.57

In the juvenile justice system, studies are similar. Here, in what the Annie B. Casey Foundation labels as a “tragic irony,” many of the young people detained are held for status offenses such as running away, truancy, incorrigibility, or and technical violations such as violations of probation, parole, or valid court orders—not for violent crimes.58
Violent property: Includes burglary, theft, auto theft, and arson.

Violent Crime: Includes criminal homicide, violent sexual assault, robbery, and aggravated assault.

Technical: Includes violations of probation, parole, and valid court order. Status: Includes running away, truancy, incorrigibility.

Whatever the offense, racial and ethnic data remain disturbing, but, as with school data explained above, the data cannot support the view that this is because these young people are more criminal. Recognizing that “[s]ome have argued that this overrepresentation of youth of color in the justice system is simply a result of those youths committing more crimes than White youth,” The National Council on Crime and Delinquency summarizes that “a true analysis is much more complicated” and does not support this conclusion.

Exclusion and detention do not achieve better outcomes for students.

As some of the leading researchers in the field have concluded, “High Suspension Rates Do Not Improve Learning Conditions.” It perhaps goes without saying that time spent learning is among the strongest predictors of achievement. Results of being out of school directly disadvantage the students and the impact is likely circular and cumulative.

Student underachievement often leads to student misbehavior in the classroom. Empirical studies confirm that it is common for low-performing students to misbehave out of frustration or embarrassment when they are unable to learn the academic material and meet grade-level expectations. For example, research shows that when students are retained in grade, this does not improve their subsequent academic achievement. As many educators well understand, when students begin to comprehend that the educational process is not working for them—that they will
not be admitted to college, have access to a good-paying job, or enjoy a promising career—they have fewer incentives to obey school rules and take school seriously, leading to disciplinary exclusion, often for trivial violations of school rules. And student misbehavior and discipline often lead to student underachievement, in a “downward spiral of academic failure, disengagement from school, and antisocial behaviors.” As leading researchers put it,

If we ignore the discipline gap, we will be unable to close the achievement gap. Of the 3.5 million students who were suspended in 2011-12, 1.55 million were suspended at least twice. Given that the average suspension is conservatively put at 3.5 days, we estimate that U.S. public school children lost nearly 18 million days of instruction in just one school year because of exclusionary discipline.

Several empirical studies support these conclusions. Analyzing longitudinal data from Florida, scholars Robert Balfanz, Vaughan Byrnes, and Joanna Hornig Fox found that the odds of a student dropping out of school increased from sixteen percent to thirty-two percent the first time that a student was suspended in the ninth grade and increased each additional time that student was suspended. Further, when controlling for other factors such as student demographics, attendance, and course performance, they found that each suspension decreased the odds that a student would graduate from high school by twenty percent and decreased the odds of a student attending a postsecondary institution by twelve percent. Similarly, analyzing longitudinal data from Texas, scholar Miner P. Marchbanks III and his colleagues discovered that when a student received some type of exclusionary discipline, including an in-school suspension, out-of-school suspension, expulsion, a disciplinary alternative placement, or a juvenile justice placement, that student was 23.5 percent more likely to drop out of school after accounting for other salient factors. Marchbanks claimed that even this was a conservative measure, and that “[w]hen a student was suspended or expelled, his or her likelihood of being involved in the juvenile justice system the subsequent year increased significantly.” And once students so disciplined they are significantly more likely to find themselves moving further along the pipeline toward prison. Once involved with the juvenile justice concerning results continue. At the prison end of the pipeline educational opportunity is severely limited in most states.

Nor do schools with high levels of exclusionary discipline attain a higher level of academic achievement for the school as a whole: “Perhaps more important, recent research indicates a negative relationship between the use of school suspension and expulsion and school-wide academic achievement, even when controlling for demographics such as socioeconomic status.” What is more “when harsh exclusionary policies are discontinued in schools, referrals to juvenile correctional facilities also decrease.”

Once in the juvenile justice system and prison part of the pipeline, the results are the same. Detention/incarceration does not accomplish one of its primary objectives, which is to deter criminal behavior. Evidence of improved outcomes from detention is similar in terms of reasons for arrest and detention and results similarly unimpressive: as the Annie B. Casey report summarized: “The vast majority of studies find that
incarceration is no more effective than probation or alternative sanctions in reducing the criminality of adjudicated youth, and a number of well-designed studies suggest that correctional placements actually exacerbate criminality.” In a comprehensive meta-analysis examining 7,304 juveniles across twenty-nine studies over a thirty-five year period, scholars Anthony Petrosino, Carolyn Turpin-Petrosino, and Sarah Gucken found that juvenile justice processing did not effectively deter delinquency; instead, it actually increased delinquency and future involvement in the justice system. In short, the research overwhelmingly demonstrates that the “official processing of a juvenile law violation may be the least effective means of rehabilitating juvenile offenders.”

Nor are the schools safer.

The negative disproportionalities might be understood if indeed removals from school were in fact making schools safer, or, if indeed, confinement in juvenile detention or other facilities led to improved outcomes. This does not appear to be the case in practice or in theory. As researchers Dan Losen and Russell Skiba summarize, “There is no evidence that frequent reliance on removing misbehaving students improves school safety or student behavior.”

In school situations, many removals are for behaviors that do not invoke real safety concerns; the vast majority of suspensions—95% of the 3.3 million children suspended from school each year—are for nonviolent offenses such as violating the dress code or “disruptive” behavior.

Figure 10. Discipline Disproportionality Illustrated, Bryant ISD, Texas Example

“C tickets” are given in Texas by School Resource Officers for discipline infractions. The total here includes the subsets of disorderly and disruptive.

As researcher Daniel Losen summarizes: “Contrary to popular belief, most suspensions are not for guns, drugs or violence. . . . Accordingly, the high rates of disciplinary removal from school currently seen in American schools cannot reasonably be attributed to the necessary responses to unlawful or dangerous misbehavior.”
Many removals stem from the application of the zero tolerance concept. The concept of zero tolerance, which calls for automatic discipline in every case of the specified behavior, was spawned by the requirements of the Gun Free School Zone Act in 1994 and grew to include other behaviors. A zero tolerance approach limited discretion, though research eventually revealed that discretion continued and the approach was not especially effective. The American Psychological Association (“APA”) Zero Tolerance Task Force concluded that these policies neither not bring about improved school safety. On the contrary, “data on a number of indicators of school climate have shown the opposite effect, that is, that schools with higher rates of school suspension and expulsion appear to have less satisfactory ratings of school climate, less satisfactory school governance . . . .”

The Manifestations
Disproportionality manifests itself all along the pipeline where students of color are poorly served.

Students of color are disproportionately lower achievers and unable to read at basic or above.

**Figure 11. Reading Below Basic by Race & Ethnicity**

The overall achievement gap between African-American, Hispanic, and American Indian Alaskan Native (AIAN) students and their White and Asian peers has been a subject of concern since at least 1966 when the U.S. Department of Health Education and Welfare commissioned the Equality of Educational Opportunity Study (Coleman Report). Because reading is one of the most critical skills for every student and citizen and relates to many other academic and societal skills, one’s ability to read offers a clear example of a primary academic concern. Differences in reading skills begin early and endure. At kindergarten, African-American and Hispanic children are
significantly less likely to know their letters or recognize beginning and ending sounds than their White and Asian peers. For example, 50% of Hispanic children recognize the letters of the alphabet when they enter kindergarten compared to 57% of African-American, 71% of White, and 80% of Asian American children.

At the end of the third grade, most gaps identified in preschoolers persist. Significantly, a student who is not a “modestly skilled reader by the end of third grade is quite unlikely to graduate from high school.” The percentage of American Indian students reading below grade level at fourth grade is 53%; for African-American students, 51%; for Hispanic students, 49%; for White students, 22%; and for Asian Pacific Islanders (ASPI), 20%. African-American and Latino 17-year-olds, on average, read at the same level as White 13-year-olds. By twelfth grade, there is an almost 30-point difference in scale scores on the National Assessment of Education Progress (NAEP).

These differences remain evident notwithstanding decades of varied strategies and interventions. Summarizing the data on this intractable problem, leading literacy researchers conclude:

Nationally reported data point to four conclusions: (1) There are differences in the emerging literacy knowledge and performance of young children entering kindergarten from various racial/ethnic and socioeconomic backgrounds; (2) the gap is greater for children who enter school with a combination of multiple risk factor (e.g., whether the primary language spoken in the home is not English); (3) by grade 4, there is a significant discrepancy between the reading comprehension proficiency of European-American, non-Hispanic students and their African American and Hispanic peers, and this discrepancy continues through grade 12; and (4) these gaps have stable for more than a decade.

Other subject areas show similar discrepancies. This is hardly surprising considering that these same students have fewer engaging educational experiences, fewer experienced highly qualified teachers, less access to rigorous and high level coursework, and experience lower expectations from their teachers.

Students of color suffer disproportionately because of lower expectations and lack of engagement.

Engagement of a young person with his/her teachers or school or other adults is critical, but many adults in these systems are not engaged. As discussed in the context section, many school officials and teachers who work with minority students living in poor neighborhoods have a stronger tendency to adopt a lower level of expectations for their students. There is troubling empirical evidence suggesting that some teachers and school officials believe that some students, particularly African-American males, are “bound for jail” and “unsalvageable.”
Students of color are disproportionately retained in grade or excluded because of high stakes testing.

In early years and beyond, minority students are disproportionately held back. For American Indian-Alaskan Native students, 7% are held back in kindergarten, for Native Hawaiian Pacific Islander students, 8%, as compared to African-American students at 5%, White and Hispanic students at 4%, and Asian students at 2%. Similar patterns continue into later grades; for example, in sixth grade, American Indian-Alaskan Natives are still held back at twice the rate of Whites, and African-American students at three times that rate; and twelve percent of African-American students are retained in ninth grade, which is nearly double the rate of all students retained.

Figure 12. Retention Rates

High stakes testing exacerbates these concerns. Students are disproportionately impacted by high school exit exams. Further, federal and state education accountability laws also may create a perverse incentive to push low-performing students out of school. Federal and state accountability laws require students to regularly test students and impose consequences on schools that fail to meet certain standards. Many fear that school officials sometimes suspend, expel, or refer low-performing students to the juvenile justice system to avoid having their low scores count against their schools.

Students of color are disproportionately subject to more frequent and harsher punishment.

School discipline runs a continuum from in-class interventions, in-school suspensions, out-of-school suspensions, placement in disciplinary alternative education programs, and to expulsions and on to the juvenile justice system and beyond.
The CRDC shows that African-American and American Indian-Alaskan Natives students are most disproportionately disciplined.

Figure 14. CRDC Discipline, by Race & Ethnicity: Suspension/Expulsion

American Indian-Alaskan Natives were only 0.5% of the student population, but accounted for 3% of expulsions, 2% of multiple out of school suspensions, 2% of single out of school suspensions, and 0.2% of in school suspensions. African-American students who represented 16% of the student population in the CRDC data, are a much higher percentage of students suspended or expelled: 34% expelled, 42% subjected to multiple out of school suspensions, 33% to single out of school suspensions, and 32% to in school suspensions. In comparison, White students in the CRDC data showed a similar range between 3-40% of students suspended or expelled, but from 51% base. Similarly, African-American children are 18% of the preschool population, and they represent 48% of preschool children suspended (out of school) more than once; White students, who are 43% of the preschool population, are only 26% of the children so disciplined. All other reported groups show preschool suspensions very close to their proportion of the population.

Figure 15. CRDC Discipline, by Race & Ethnicity: Preschool Suspension

This kind of disproportionality is especially evident for offenses that are not serious and that call for subjective judgment. Among students who were seriously disciplined—that is suspended for more than five days, removed from school with no services, or placed in disciplinary alternative education settings—only about 1% of the cases involved firearms or explosives. By comparison, insubordination accounted for 42.5% of the serious discipline cases. For discipline with less serious consequences—particularly out of school suspension—the most common offenses also included insubordination together with disruption, and physical or verbal aggression.

Multnomah County, Oregon, data further illustrates this problem. With a population of 28,115 White students and 23,950 students of color, data show that in the categories that mostly involve discretion in identifying facts or interpretation of behavior, students of color (46% of population) accounted for 61% of the discipline incidents and White students (54% of population), 37%. The relative rate of discipline incidents was 3.3 for African-American students, 1.88 for Latino, 2.13 for Native American, and 0.46 for Asian (with White equaling 1). In this study,
the most common basis for discipline for both groups was fighting at about the same proportion of discipline incidents for each group. In another example, in the Breaking Schools’ Rules study of disciplinary practice in Texas, researchers observed that almost 60% of the public school students studied were either suspended or expelled at least once from grade 7 to 12. Controlling for other variables, researchers concluded that African-American students were 31% more likely to be disciplined for in school discretionary categories than their “otherwise identical” White and Hispanic peers.

Figure 16. Suspension Disproportionality by Race & Gender: MS & FL examples.

This kind of disproportionality is most commonly discussed for boys, but is also evident among certain groups of girls. As the CRDC reported, “While boys receive more than two out of three suspensions, African American girls are suspended at higher rates (12%)—and for unique, gender based reasons—that girls of any other race or ethnicity and most boys; American Indian and Native-Alaskan girls (7%) are suspended at higher rates than both White boys (6%) and girls (2%); research also shows that suspensions are particularly high for girls with darker skin tones.”

Students of color are disproportionately referred to law enforcement or subject to school-related arrest.

The CRDC also shows that African-American students (who are 16% of population reported in the CRDC sample) are 27% of students referred to law enforcement and 31% of students subject to school-related arrest. American Indian-Alaskan Native (AIAN) numbers are also out of proportion. Although AIAN students amount to less than 1% of the student population, they are 3% of students referred to law enforcement and 2% of students subject to school-related arrest. For White students, only 41% are referred to law enforcement and 39% subject to school related arrest, both lower than their part of the population.
Students of color are disproportionately placed in alternative schools.

Originally conceived as a setting that could provide optimum environments for students not doing well academically or behaviorally in regular school settings, these schools now primarily serve students labeled as disruptive or dangerous.\textsuperscript{142} While alternative schools may be seen as an alternative to exclusion, they are both increasingly used and in demand and increasingly seen as punitive. In a study of Jefferson County, Kentucky public schools, researchers found that nearly 1 in 10 children “experienced placement in a disciplinary school between 3rd and 12th grade.”\textsuperscript{143} They also found that “racial gaps were pronounced as 13% of all African-American students in the cohort experienced placement compared to 4% of the White students.”\textsuperscript{144}

Students of color are disproportionately drop out of school and fail to graduate from high school.

Graduation rates and comparative graduation rates have improved—indeed they are widely reported to have reached 80% in 2014\textsuperscript{145}—but differences remain.\textsuperscript{146} It is still
the case that minority students as a group continue to lag behind.\textsuperscript{147} Comparative graduation rates are 62\% for African-American students, 51\% for American Indian-Alaskan Native students; and 68\% for Hispanic students; as compared to about 80\% for White and 81\% for Asian students.\textsuperscript{148}

Like the graduation rate, the status dropout rate\textsuperscript{150} (young people who are out of school without achieving a high school level of educational attainment) is improving—now reported to be at 9.3\% overall, though this still represents about five thousand students a day, over a million a year.\textsuperscript{151} But like the graduation rate, despite general improvement, the dropout rate remains high for some groups, disproportionately so,\textsuperscript{152} particularly for American Indian-Alaskan Native and Pacific Islanders: Asian, 3.0\%; White, 6.1\%; Hawaiian/Pacific Islander, 7.6\%; African-American, 11.5\%; Hispanic, \%; American Indian-Alaskan Native, 5.3\%.\textsuperscript{153}

**Figure 19. Status Dropout Rate by Race & Ethnicity\textsuperscript{154}**
Some researchers suggest that these rates are understated “by as much as 12.5 percent for young White men and by as much as 40 percent for young Black men” because conventional sources for the data do not include incarcerated populations, so much so that when inmates are included the data on educational attainment suggests that “black men have experienced no improvement in high school completion rates since the early 1990s.”

Excluding a student from school also increases the likelihood that a student very soon will become involved in the juvenile justice system. The American Academy of Pediatrics Committee on School Health observed that when students are not monitored by trained professionals and are at home without parental supervision, they are far more likely to commit crimes, such as becoming involved in a physical altercation or carrying a weapon. In their longitudinal study of Texas students, scholar Tony Fabelo and his colleagues found that when a school suspended or expelled a student for a discretionary offense, that student was approximately 2.85 times more likely to have contact with the juvenile justice system during the next academic year. With each subsequent exclusionary punishment the student received, the odds of involvement with the juvenile justice system further increased. Tracey Shollenberger’s national longitudinal survey of youth also confirms that students are more likely to be arrested and incarcerated when they are suspended, and those odds increase as students receive more suspensions.

This data directly relates to later life data. Dropouts are far more likely to be institutionalized in prisons and health care facilities, 45.9% compared to 8.8% in total for all racial categories. More specifically, “schooling significantly reduces the probability of incarceration,” more so for African-Americans than Whites, so much so that some researchers have found that different levels of “educational attainment between black and white men explain 23% of the black-white gap in male incarceration rates.”

Students of color disproportionately feel threatened at school and suffer consequences as victims.

Hispanic, African-American, American Indian-Alaskan Native, and Native Hawaiian Pacific Islander (NHPI) students are more likely to report feeling threatened or being injured by weapons, more likely to perceive gang activity at school, and more likely to have been in a physical fight at school. Hispanic, American Indian-Alaskan Native, and NHPI students are significantly more likely to report drug availability at school, and Hispanic students are most likely to report avoiding certain areas of school because they fear being attacked or harmed. African-American students report being among students who are victims of nonfatal crime at school more often than any other group. In comparison, White students are more likely to report having access to a loaded gun.
As victims, these students suffer additional consequences. As the Bureau of Justice Statistics summarizes:

Our nation’s schools should be safe havens for teaching and learning free of crime and violence. Any instance of crime or violence at school not only affects the individuals involved but also may disrupt the educational process and affect bystanders, the school itself, and the surrounding community. For both students and teachers, victimization at school can have lasting effects. In addition to experiencing loneliness, depression, and adjustment difficulties, victimized children are more prone to truancy, poor academic performance, dropping out of school, and violent behaviors. For teachers, incidents of victimization may lead to professional disenchantment and even departure from the profession altogether.\textsuperscript{169}

For students with disabilities, disproportionality manifests itself all along the pipeline in areas similar to those outlined in the preceding section on students of color.

**Students with disabilities are disproportionately students of color especially in discretionary categories and these categories compound.**

Especially in discretionary categories, students with disabilities are disproportionately students of color.\textsuperscript{170} In 2011-2012, about 13% of the school population received services under the Individuals with Disabilities Education Act (IDEA), Part B, special education;\textsuperscript{171} this is almost 6.5 million students of whom 3.6 million were White and Asian and 2.8 million students of color. As with regular education, some groups in the special education population differ from their representation in the juvenile population.
In its annual report to Congress on IDEA, the Department of Education reported as to overall identification that differences existed based on race and ethnicity with the risk index being largest for American Indian-Alaskan Native students, followed by African-American and then Hispanic students. The 2011–2012 data shows that while American Indian-Alaskan Native students are 0.9% of the juvenile population, they are 1.4% of the special education population; Pacific Islanders are 0.2% of the juvenile population and 0.3% special education; African-American students, 15% of the juvenile population and 18.7% special education; all other groups have a smaller percentage in special education than in the juvenile population as a whole.\textsuperscript{172}

\textbf{Figure 21. CRDC Students with Disabilities (IDEA) Out of School Suspensions by Race/Ethnicity and Gender}\textsuperscript{173}

Some young people who are in more than one group are particularly negatively impacted. As the National Disabilities Rights Network puts it, “Applying these three lenses together—race, gender and disability—yields a more disturbing image than any one of the categories alone. The group that consistently had the highest rate of suspension is African-American male students with disabilities. In some of the largest districts in the U.S., suspension rates for this group reached more than 70% of their enrollment.”\textsuperscript{174}
Disproportionality also appears within certain categories within special education. Among high incidence disability categorizations, three in particular have been highlighted as showing disproportionate representation—Intellectual Disability (formerly mental retardation), Specific Learning Disability, and Emotional Disturbance. These are discretionary categories; they are “soft” identifications which depend on judgment, not just medical or biological testing. Unlike, for example, hearing impairment which is subject to expert testing, the softer categories involve children who “typically do not exhibit readily observable distinguishing features,” meaning that the “authoritative diagnosis of medical professionals, which is common in assessment of many of the low-incidence disabilities, is absent.” In a pattern like special education classification overall, American Indian-Alaskan Native and African-American students are categorized as intellectually disabled in greater percentages than their representation in the juvenile population, 1.3% compared to 0.9% for the American Indian-Alaskan Native students and 28% compared to 15% for African-American students. For other groups the proportions are equal or less; for example, 47% of students classified as intellectually disabled are White, while White students are 53% of the juvenile population as a whole.
Students with disabilities are disproportionately less likely to be academically proficient.

The achievement gap between students with disabilities and students without disabilities is longstanding and deep. In “virtually every case, special education students have the lowest average proficiency level on standardized tests and are unable to close the achievement gap over time.” Based on the limited results available, at the fourth grade level, students with disabilities consistently score 45 points lower than students without disabilities score in reading. At eighth grade, the difference was 43 points and at twelfth grade 41. At fourth grade, 65% of students with disabilities scored below basic levels and in the eighth grade, 62%.

Students with disabilities are disproportionately disciplined.

The IDEA requires that students with disabilities be in the “least restrictive environment” and also limits suspension from school or change of placement for behavior that violates the school’s code of conduct but was caused by or substantially related to the students’ disabilities. These provisions would suggest that students with disabilities would be less likely to be suspended or expelled; however, this is not the case. Special education students are far more likely to be suspended from school and expelled with and without services than other students. For all racial groups, over 13% percent of students with disabilities were subject to out of school suspension compared to 6% of students without disabilities, and the largest racial disparities occur among these students.
Further disaggregation of the data among these students, American Indian-Alaskan Native and African-American students, together with students identifying as two or more races, were most like to be suspended. For example, with respect to for boys with disabilities, 29% of those students receiving out of school suspensions were American Indian-Alaskan Native, 27% African-American, and 34% two or more races; with respect to girls with disabilities, these groups are 20%, 19%, and 27% respectively. By comparison, White boys and girls, who, again, are a much larger part of the population were reported at 12% and 6% of the out of school suspensions.192

State reports on this issue show similar patterns. For example, the Texas Breaking Schools’ Rules study showed high levels of discipline for special education students, finding that almost three-quarters of this group were suspended or expelled at least once during the period of the study; some categories, such as Emotional Disturbance, were more prominent in this group.193 The Oregon study showed special education suspensions (out-of-school) 3.6 times higher than those of other students in elementary school and 2.2–2.3 times higher in middle and high school.194

Students with disabilities are disproportionately retained in grade, but still dropping and out failing to graduate.

Students with disabilities are retained in grade more than their percentage of the student population might suggest. The CRDC reports that IDEA students are 12% of high school enrollment, but 19% of students retained.195 Overall, only 57% of students with disabilities graduate. Only 39.2% of African-American (not Hispanic) special education students graduate with regular diplomas, with 35.1% dropping out; for Hispanics, the numbers are 47.1% graduating with regular diplomas, with 34.9% dropping out.196

Students with disabilities are disproportionately likely to spend time out of the regular classroom, to be secluded, restrained or placed in alternative schools.

IDEA imposes a requirement that special education students be mainstreamed in the “least restrictive environment” wherever possible.197 Notwithstanding the statutory requirement, special education students are often out of the regular school environment. Students with disabilities are 75% of students restrained at school and 58% of students who are secluded (though only 12% of the CRDC student population).198 As a whole, students with disabilities spend between 40 and 52 percent of their time outside their regular classrooms.199 In particular, students in high incidence, high discretion special education categories are out of their classrooms; for example, students labeled intellectually disabled, where 48% spend less than 40% in the classrooms, and 74% spend less than 80% in their regular classrooms.200 Given what we know about the racial and ethnic special education population, this means more minority students are likely to spend more time outside of their classrooms.
As is the case with students of color, many students with disabilities are placed in alternative schools. Research suggests that this strategy has exacerbated inequities. Students with disabilities are disproportionately referred to law enforcement or subject to school-related arrest and incarceration. Special education students are 25% of students referred to law enforcement, and 25% of those subject to school-related arrest, over twice their representation in the student population.
Not surprisingly, we have long known that students with disabilities are disproportionately represented in the correctional system.\(^{206}\) It is estimated that 65% the youth in juvenile or adult criminal justice systems meet the criteria for disability.\(^{207}\) Almost 1 in 3 of young people who are incarcerated are identified as having or needing special education.\(^{208}\) These students are incarcerated at rates four times higher than young people attending regular schools.\(^{209}\)

The 2005 report under the auspices of the Coordinating Council on Juvenile Justice and Delinquency Prevention showed that most of the students who are incarcerated are categorized as “emotionally disturbed” (47.7%). The next highest category is “specific learning disability” (38.6%), then “intellectually disabled” (9.7%), followed by “other health impaired” (2.9%) and “multiple disabilities” (0.8%).\(^{210}\) Although their numbers are significant and disproportionate, the education provided to these students is limited at best.\(^{211}\)

**Students with disabilities are disproportionately bullied and victimized.**

Like students of color, students with disabilities are highly likely to be bullied or victimized, both by other students and by teachers;\(^{212}\) and they suffer the related psychological distress.\(^{213}\)

**Similar Disproportionalities and Difficulties Impact LGBTQ and GNC Young People.**

Data on Lesbian, Gay, Bisexual, Transgender, Questioning (LGBTQ) and Gender Nonconforming (GNC) students is more difficult to cumulate than data on other groups,\(^{214}\) but the data available shows that they suffer many of the same negative distinctions as other groups reviewed in this report, if not more.\(^{215}\) They also are likely to suffer the compounding problem that occurs when they are part of two such groups.\(^{216}\)

**LGBTQ youth suffer in a disproportionately difficult school climate.**

LGBTQ and GNC youth are subject to hostile school climates with attendant negative consequences.\(^{217}\) As the Gay, Lesbian & Straight Education Network (GLSEN) explains, “Schools nationwide are hostile environments for a distressing number of LGBTQ students, the overwhelming majority of whom routinely hear anti-LGBTQ language and experience victimization and discrimination at school.”\(^{218}\) Because of their sexual orientation or gender expression, these students do not feel safe at school,\(^{219}\) where they are more often victimized and often blamed even while they are victims.\(^{220}\) These students are far less likely to find support for stopping the harassing or assaultive behavior.\(^{221}\) As one student put it, “The time I did report, the process of being heard was more demeaning than the harassment.”\(^{222}\) Another student observed, “Almost all of the time, I would end up being the one in trouble because it’s ‘my fault for drawing negative attention to myself.’”\(^{223}\)
As GLESN reports, in these conditions, LGBTQ students are far more likely to miss school or avoid certain parts of the school facilities or activities. They are also more likely to have lower GPAs, lower expectations for post-secondary education, lower levels of self-esteem, and higher levels of depression.

LGBTQ and GNC youth are disciplined more severely in school and juvenile justice.

Recognizing that LGBTQ juveniles have higher health risks, a longitudinal study published in Journal of the American Academy of Pediatrics found that, controlling for other variables, non-heterosexual youth were disproportionately subject to sanctions including school expulsion, police stops and arrests, and juvenile convictions, with girls more likely to suffer these differences than boys. LGBTQ young people who are also students of color are also harshly penalized. Treated unfairly, these young people “learn to mistrust not just school police, but all school administration and staff.”

These Same Disproportionalities Experienced in School Plague the Juvenile Justice System.

Students enter and stay or the juvenile justice system following a variety of paths.

Figure 26. Contact Points Juvenile Justice
While the numbers of young people detained have declined, the numbers of students who find themselves in court—juvenile courts and municipal or justice courts with authority to impose criminal sanctions—because of behavior at school has dramatically increased. The Juvenile Section of the Texas bar writing in 2010 described this as a “paradigm shift” where student behavior that previously resulted in “trips to the principal’s office, corporal punishment, or extra laps under the supervision of a middle school or high school coach,” now result in criminal prosecution and records for children ages 10 through 16. On any given day, some 20,000 young people are in juvenile detention centers; 54,000 in youth prisons or other confinement; 4,200 in adult jails; and 1,200 in adult prisons. Eighty-seven percent of these young people are incarcerated for nonviolent offenses, and the “majority (66 percent) were youth of color.” These young people are all too often mistreated and increasingly abused.

“With few exceptions, data consistently show that youth of color have been overrepresented at every stage of the juvenile justice system.” Specific groups in specific situations show particular disproportionalities. For example, while Native American youth are not generally disproportionately arrested, in South Dakota they are very much so, 9% of the population and 40% of the arrests. Overall, minority youth are disproportionately represented in this system. As the recent National Academy of Science report on Reforming Juvenile Justice summarized: “There is evidence that ‘race matters’ above and beyond the characteristics of an offense.”

Youth of color are disproportionately arrested.

Figure 27. Juveniles Arrested by Race

Arrest is the decision that is most significant to the total level of disproportionality in the juvenile justice system. While arrest rates have declined considerably, those under 18 still represent 12.5% of those arrested, and there is still a significant gap among juveniles of different races with African-American and American Indian
rates remaining higher than White and Asian.\textsuperscript{248} The Office of Juvenile Justice and Delinquency Prevention (OJJDP) uses Relative Rate Indices (RRI) to describe disproportionality, between treatment of White youth and those of other races;\textsuperscript{249} for minorities, the RRI is 1.7 at the arrest decision point showing a minority youth arrest rate 70\% more than the arrest rate of White youth.\textsuperscript{250} The RRI for African-Americans is 2.2.

These rates have remained essentially stable since 1990.\textsuperscript{252} Recent research suggests that while the risk of arrest is generally disproportionate for African-American youth, this is particularly so in communities that are predominantly non-Black.\textsuperscript{253} Arrest is an especially worrisome point given its impact on subsequent points in the juvenile justice system.\textsuperscript{254} Once bias, “either overt or covert (also known as selection bias) that is introduced by the police is very likely to affect outcomes at later stages, even if no bias occurs at later stages.”\textsuperscript{255} When minority youth are more likely to be arrested and formally processed than their White peers who have engaged in like behavior, then those youth will obviously “more readily accumulate offense histories and dispositions from which inferences are drawn about their character and capacity for reform”—which will influence later outcomes.\textsuperscript{256}

**Youth of color are disproportionately referred, detained (longer), charged, and held.**

Once arrested, the rate of referral to juvenile court further increases disparities. For example, for 2010, “even after controlling for possible disparities up to the arrest decision, minority youth were more likely than white youth to be referred to juvenile court for a delinquent offense.”\textsuperscript{257} Youth of color are then detained disproportionately: “In 2010, the likelihood of detention was greatest for black youth for all but public order offenses—American Indian and Asian youth had slightly
greater proportions of public order cases detained (30% and 29%, respectively) than black youth (26%).

Figure 29. Juveniles in Residential Facilities by Race & Ethnicity

Once detained, minority youth are more likely to stay in the system longer than their White peers, and more likely to be locked up. Some analysts have concluded that youth detention “is the most significant [stage of the juvenile justice process] for the rest of a young person’s life,” because “[a]n adolescent who has spent time in secure detention is far less likely to attain a high school diploma or consistently participate in the labor force in the future.”

Figure 30. Time Detained by Race & Ethnicity
Massachusetts data is illustrative at the state level. Although the number of detained/committed youth has decreased, minority youth remain disproportionately represented in the system. Minority youth who represent about 20% of the juvenile population are nearly 60% of the young people securely detained after arraignment and before adjudication, and 60% of those committed to the Commonwealth’s Department of Youth Services (DYS) after an adjudication of delinquency.\(^{263}\)

Once in the system, there are various disproportionalities. Black youth have been found to be “more likely than white youth or youth of other races to receive formal delinquency petitions, although they were less likely to be adjudicated delinquent.”\(^{264}\) However, “Black youth [are] more likely than White youth to be prosecuted for serious crimes.”\(^{265}\) Then they are disproportionately confined as compared to placed on probation,\(^{266}\) and more likely to be transferred to adult facilities for detention.\(^{267}\)

**Youth with disabilities show the same disproportionalities and experiences in juvenile justice as well.**

Statistics on disabled youth in the juvenile justice system are less precise than data disaggregated by race, ethnicity, class, and other demographic categories, because not all studies define disability in the same way,\(^{268}\) and few jurisdictions maintain consistent and comprehensive databases regarding youth with disabilities being processed through the system.\(^{269}\) However, there is wide agreement that disabled youth are overrepresented in the juvenile justice system, especially with regard to detention.\(^{270}\) Estimates of the percentage of incarcerated youth offenders with learning disabilities range from 28–50%,\(^{271}\) although disabled youth make up only 4–9% of the adolescent population.\(^{272}\)

Recent studies have shown that disabilities are predictive both of delinquency and of recidivism.\(^{273}\) Research focusing on arrest rates for minors with serious emotional disabilities shows a predictably broad range, reported by one researcher as 21–58%.\(^{274}\) Beyond the initial offense, there is more substantial evidence that juveniles with learning disabilities are at greater risk of recidivism and may face difficulty reentering a school environment in which they already at a disadvantage.\(^{275}\) The precise causes of this higher rate of recidivism, however, represent an unresolved topic of scholarly debate.\(^{276}\)

The intersection between race and disability in juvenile justice has not been extensively researched. However, a recent study examining the combination of race and disability as a predictor of recidivism found that disability status increases the likelihood of repeat offending for both black and white adolescents.\(^{277}\) Interestingly, a mental health diagnosis (but not a learning disability) “relating to aggression or impulse control” was the strongest predictor of recidivism for both groups, but a school-classified learning disability increased the risk for black youth more than for white youth.\(^{278}\)
LGBTQ youth are also disproportionately represented in juvenile settings.

While LGBTQ youth are thought to be about 7% of the overall youth population, they represent over 15% of those in the juvenile justice system. Consistent with this, youths who self-identified have been significantly more likely to be stopped by police than their peers identifying as heterosexual. They are twice as likely to be detained and held in secure facilities for “truancy, warrants, probation violations, running away, and prostitution compared with their heterosexual and gender-normative peers,” though they are on a par for more violent offenses. While youth who do continue with education in juvenile justice are less likely to be recidivists, education within juvenile justice settings is lacking. Return to school for youth from alternative schools or juvenile justice settings is difficult.
Societal Consequences for Imprisoning Youth

The total exclusion from the education process for more than a trivial period... is a serious event in the life of the suspended child. Neither the property interest in educational benefits temporarily denied nor the liberty interest in reputation, which is also implicated, is so insubstantial that suspensions may constitutionally be imposed by any procedure the school chooses.285

The costs of maintaining the status quo are extraordinarily high for individual students, their families, their communities and the economy as a whole. Individuals in the school-to-prison-pipeline lose the chance for educational achievement and related life opportunities.

Figure 31. Earnings by Status286

They are lost to the workforce and costly.287 Estimates vary on exactly how costly, depending on what is being counted, e.g., dropout v. juvenile detainee, but by all accounts they are staggering in terms of lost wages and taxes and extra medical, increased crime-related expenditures, and other costs:
The Center for Labor Market Studies estimates the social and economic costs of dropouts as a consequence of lower earning power and job opportunities, unemployment, incarceration, and government assistance. High school dropouts are estimated to earn $400,000 less than high school graduates across their working lives. The lifetime earning loss for males can exceed $500,000. In addition, because of lower lifetime earnings, dropouts contribute far less in federal, state, and local taxes than they receive in cash benefits, in-kind transfer costs, and incarceration costs as compared to typical high school graduates.

Figure 32. Annual Costs per Inmate/Student

In contrast, students who do not drop out and who are not incarcerated, but continue their education and graduate from high school and beyond are more likely to be employed and enjoy more earning power over their lifetimes. Empirical research demonstrates that they suffer additional long-term detrimental effects, including reinforcement of violent attitudes and behaviors and heightened mental health concerns. They are “more likely than their peers who graduate to be unemployed, living in poverty, receiving public assistance, in prison, on death row, unhealthy, divorced, and ultimately single parents with children who drop out from high school themselves.”

In this context, some have described increasing the high school graduation rate as the nation’s best economic stimulus. As the Alliance for Excellent Education summarizes:

Lower local, state, and national tax revenues are the most obvious consequences of higher dropout rates; even when dropouts are employed, they earn, on average, $8,000 less annually than high school graduates and they pay less in taxes. State and local economies suffer further when they have less-educated populaces, as they find...
it more difficult to attract new business investments. Simultaneously, these entities must spend more on social programs when they have lower educational levels.\textsuperscript{296}

Noting that two-thirds of the U.S. economy is driven by consumer spending, some researchers point out that raising individuals' education levels will boost their purchasing power and increase the national economy.\textsuperscript{297}

There are also more direct costs. Staying in the education pipeline and out of the prison pipeline is a huge cost savings to society.\textsuperscript{298} The Alliance for Excellent Education, for example, has calculated that calculating that $18.5 billion in crime costs could be saved annually if the male high school graduation rate increased by 5 percent.\textsuperscript{299} More directly, juvenile detention costs are extremely high, averaging $148,767 per juvenile per year and ranging as high as $352,663 in the state of New York.\textsuperscript{300} This extraordinary expense dwarfs the amount that on average our nation spends to educate one youth per year in our public schools ($12,608 in 2010–2011).\textsuperscript{301} And incarceration beyond juvenile years just adds to these expenditures; for New York City, the cost of an inmate is higher than Harvard tuition.\textsuperscript{302}

Figure 33. Reducing the Number of Youth in Juvenile Facilities\textsuperscript{303}
Causes of the School-to-Prison Pipeline

As previously described, causes of the school-to-prison pipeline are many and complex. Here we discuss in some detail three, which relate particularly to work of the American Bar Association on this issue: criminalization of school discipline; the presence and role of School Resource Officers; and the role implicit bias plays in disproportionalality. Other law-related causes discussed in somewhat less detail include the impact of zero tolerance policies, the limited constitutional rights of students in school, low academic achievement, and high stakes testing.

Criminalization of School Discipline

Over the last three decades, there has been a distinct shift among many lawmakers, school officials, and teachers regarding how to discipline children for violations of school rules. While at one time it was common for educators to send students involved in a fight to the principal’s office for assessment and discipline, in too many schools today it is just as common to refer those students to law enforcement for arrest and prosecution. Several scholars have referred to this shift as the “criminalization of school discipline.”

The reasons behind the criminalization of school discipline are complex. Several scholars have observed that the criminalization of school discipline has emerged parallel to and in connection with the criminalization of social problems generally in the United States. When violent crime rates for juveniles increased from the mid-1980s to 1994, particularly among minority youth in the inner cities, elected officials felt political pressure to respond in the same fashion that they responded to the increase in adult crime. Moreover, although juvenile crime rates have steadily declined since 1994, a series of high-profile school shootings further propelled lawmakers to respond in this manner. Consequently, lawmakers passed a series of harsh laws designed to deter juvenile crime on the streets and in schools. At the same time, many school officials, also facing pressure to respond to high-profile incidents of school violence, began embracing strict, heavy-handed disciplinary methods to maintain order and control in their buildings. The end result is a series of laws, policies, and practices that have pushed more students out of school and into the justice system.

Many of the laws, policies, practices, and trends that have converged over the last three decades, resulting in the creation of a pathway from school-to-prison for too many students. Some of these laws, policies, practices, and trends stem directly from the “tough on crime,” punitive mindset described above. Others are less related to that mindset, but still contribute to the Pipeline in other ways.
The Increased Presence of Law Enforcement Officers in Schools

A key component of the Pipeline is the increased presence of law enforcement officers in schools. Law enforcement officers have interacted with and provided services to schools for decades.\textsuperscript{317} However, the practice of having law enforcement officers, or school resource officers (SROs),\textsuperscript{318} regularly present in schools on a large scale is a relatively new phenomenon, part of the larger overall movement towards criminalizing school discipline.\textsuperscript{319} In the late 1970s there were fewer than one hundred police officers in our public schools,\textsuperscript{320} but this number grew significantly in the years that followed. According to the Bureau of Justice Statistics’ Law Enforcement Management and Administrative Statistics survey, in 1997 there were approximately 12,300 SROs employed by local law enforcement agencies nationwide.\textsuperscript{321} In 2003, the number of full time SROs jumped to a high of 19,900.\textsuperscript{322} In 2007, the number of SROs dropped slightly to 19,088.\textsuperscript{323}

Figure 34. Security Presence in Schools % Students of Color\textsuperscript{324}

![Security Presence in Schools % Students of Color](image)

Students of color = combined Black, Hispanic, ASPI AIAN

Security = security guard, security personnel, School Resource Officers (SROs), or sworn law enforcement officers who are not SROs

SRO programs vary from state to state, county to county, and even district to district.\textsuperscript{325} In some states and counties, police agencies assign SROs to schools, either by request of school district officials or by the police agencies.\textsuperscript{326} In a handful of states, school districts have the authority to create school district-run police departments.\textsuperscript{327} SRO programs are very expensive.\textsuperscript{328} A rough estimate of the cost of employing 19,088 full time SROs is almost $619 million a year.\textsuperscript{329} To put an SRO in every public school, as some recommend, would cost approximately $3.2 billion each year.\textsuperscript{330} Despite this high cost, federal and state governments have encouraged the use of law enforcement and other strict security measures in schools by passing laws granting money for these purposes. For example, the U.S. Department of Justice’s
Community Oriented Policing Services (COPS) program and the Safe and Drug-Free Schools and Communities Act have provided millions of dollars for law enforcement, metal detectors, surveillance cameras, and other deterrent and security measures in schools.\textsuperscript{331} Several states also have their own programs to fund these strict measures in schools, even prior to the Newtown shootings.\textsuperscript{332}

Although lawmakers, police departments, and school officials expanded SRO programs to enhance school safety in the wake of rising juvenile crime rates and high-profile school shootings,\textsuperscript{333} the programs were largely unevaluated and may have the opposite effect.\textsuperscript{334} According to a recent Congressional Research Service Report,

\begin{quote}
The body of research on the effectiveness of SRO programs is limited, both in terms of the number of studies published and the methodological rigor of the studies conducted. The research that is available draws conflicting conclusions about whether SRO programs are effective at reducing school violence. Also, the research does not address whether SRO programs deter school shootings, one of the key reasons for renewed congressional interest in these programs.\textsuperscript{335}
\end{quote}

Absent evaluation, lawmakers and school officials expanded SRO programs despite the potentially harmful effects that SROs may have on the educational setting.\textsuperscript{336} For example, strict security measures in and of themselves can harm the educational climate by alienating students and generating mistrust,\textsuperscript{337} which, paradoxically, may lead to even more disorder and violence.\textsuperscript{338}

Further, several empirical studies demonstrate that putting more SROs in school is associated with involving more students in the criminal justice system, even for low-level violations of school behavioral codes.\textsuperscript{339} For example, examining restricted data from the U.S. Department of Education, Jason Nance found that a police officer’s regular presence at a school significantly increased the odds that schools referred students to law enforcement for several lower-level offenses.\textsuperscript{340} These findings held true even after taking into account other variables that might influence whether schools refer students to law enforcement such as general levels of criminal activity and disorder in the schools and neighborhood crime.\textsuperscript{341} Matthew Theriot took advantage of a natural experiment in which a school district in the southeastern United States assigned full-time SROs to schools residing within the city limits, but not without those limits.\textsuperscript{342} Theriot found that schools with SROs were more likely to arrest students for lower-level offenses such as disorderly conduct than schools without SROs, but not for more serious crimes.\textsuperscript{343} In a very recent study, Emily Owens discovered that police jurisdictions that received federal grants to hire more SROs in schools learned about more crimes taking place in schools, and those law enforcement agencies were more likely to arrest students who commit crimes in schools.\textsuperscript{344}

Perhaps the most significant challenge of having SROs in schools is that while SROs may be in schools primarily to enhance school safety, many SROs also become involved in student disciplinary matters that educators traditionally have handled and should continue to handle.\textsuperscript{345} It is easy to see how this happens. Most SROs spend their time each day patrolling buildings and grounds, investigating complaints, minimizing disruptions, and maintaining order.\textsuperscript{346} When SROs observe students
being disruptive and disorderly, they intervene because they view this as one of their duties, even when those duties overlap with the traditional duties of school officials.\textsuperscript{347} Furthermore, SROs apparently have the legal authority to intervene in almost all student disciplinary matters. For example, most states have criminal laws that prohibit assault, disorderly conduct, larceny, and disturbing the peace,\textsuperscript{348} and several states have passed statutes that explicitly criminalize the disruption of school activities\textsuperscript{349} or talking back to teachers.\textsuperscript{350} Accordingly, if a student is involved in a scuffle with another student, talks back to a teacher, yells at another student, steals another student’s pencil, or exhibits other types of poor behavior, SROs have legal authority to arrest that student, even a six-year-old student who is throwing a temper tantrum.\textsuperscript{351} Thus, in many schools, SROs have become the “new authoritative agents” of discipline.\textsuperscript{352}

The problems with SROs handling student disciplinary issues are multifaceted. Whereas teachers and school officials have advanced academic credentials, receive training in child psychology, discipline, pedagogy, educational theory and practice, and are accountable to local school boards,\textsuperscript{353} SROs are trained in law enforcement, have little or no training in developmental psychology or pedagogy, and may not be accountable to school boards.\textsuperscript{354} Thus, an SRO’s decision to arrest a student may be based on criteria that are wholly distinct from and even anathema to the best interests of the student or the school as a whole.\textsuperscript{355} The anecdotal evidence of SROs mishandling student discipline problems abounds.\textsuperscript{356} In its investigation of the Ferguson Missouri Police Department, the United States Department of Justice recently determined the following:

SROs’ propensity for arresting students demonstrates a lack of understanding of the negative consequences associated with such arrests. In fact, SROs told us that they viewed increased arrests in the schools as a positive result of their work. This perspective suggests a failure of training (including training in mental health, counseling, and the development of the teenage brain); a lack of priority given to de-escalation and conflict resolution; and insufficient appreciation for the negative educational and long-term outcomes that can result from treating disciplinary concerns as crimes and using force on students.\textsuperscript{357}

The Role of Implicit Bias and Related Unconscious Associations/Decisions\textsuperscript{358}

A particularly alarming aspect of the school-to-prison pipeline is that certain groups of students, especially minority students, are disproportionately affected. At each juncture of the pipeline—from failing to receive a quality education, failing to graduate, being suspended or expelled, or being referred to law enforcement for violating a school rule and then on into the juvenile justice system—there are differences along group lines that are not readily explicable. The differences and disproportionalities discussed in this report are so well documented, so large, and so well known that one must question why the pattern has not yielded to change.

When one considers the statistical overview from a high level, it may sometimes be difficult to remember that these appalling numbers represent decision after decision
point in the lives of individual students. Many—if not most—of the critical decisions impacting young people along the educational pipeline are discretionary individual decisions. For the most part, these decisions will have been made by people acting in good faith—a teacher who recommends a student to take advanced courses in mathematics or science (or not); the school official who decided to suspend a student for disruptive behavior (or not); the special education team that classifies a child as emotionally disturbed (or not); the police officer who decides to arrest (or not); the prosecutor who decides to prosecute (or not); the judge who decides divert or detain; and so on. In these instances, it is hardly likely that the teacher explicitly thought, “Oh, J won’t make it in school, he’s Black;” or “Oh, let’s call the police about K, he’s ADHD and his family are Hispanic so we might as well get some help getting him out of here.” It is unlikely that the police officer thought similarly and explicitly decided on these bases to arrest rather than call J or K’s parents; it is even less likely that the judge was so motivated. It is hardly likely that any of these decision makers would consciously agree with these sentiments, in fact, the opposite.

If these explicit biases are not the reasons underlying the seemingly intractable data on disparity, then what are the reasons? While there are several factors that may contribute to these disparities, if we accept as given that most educators and juvenile justice decision makers are acting in good faith when they explicitly exercise their discretion, then a possible explanation lies with implicit associations that influence their discretionary decisions. That is, as many researchers now agree, a primary cause of differential treatment is the implicit bias of decision makers. This part of the report discusses the issues from this perspective.

Explicit bias is a preference deliberately generated and consciously experienced as one’s own; implicit bias is an association or preference that is unconscious and experienced without awareness. Implicit biases may well be dissociated from what we actively and honestly believe. When a teacher says that the boys will be better choices for the math team than the girls, that teacher is displaying an explicit bias; but when that teacher asserts he is selecting students for the team equitably, yet the team repeatedly is disproportionately male dominated, that teacher is likely displaying an implicit bias in selecting members. When Jennifer Mendoza made baseball history as the first woman to call a nationally televised game, and a fan tweeted that “No one wants to hear a women in the booth . . . [sic] I will not listen or watch those games she is on,” that fan is expressing an explicit bias. When an employer selects men over women based on names or pictures making gender clear, that employer is likely responding with implicit bias.

It used to be the case that if we wanted to know a person’s bias, we asked. Not surprisingly, the answers, particularly in socially sensitive situations, were often less than accurate, whether because we believe we are not biased, because we do not want those around us to know we think we may be biased, or because we do not know ourselves.

Asking measured explicit bias. Over the past twenty years, we have developed new approaches that can measure bias without asking directly. Now rather than ask, we measure bias by measuring reaction time (response latency) to paired stimuli, such as matching the word male with the name Greg, or female with Emily, as compared to male with Emily. These are automatic associations, and they exist in
many domains. The underlying theory in the research is that we will respond more accurately and quickly to associations that fit with our pre-formed mental templates or schemas, female with Emily;\textsuperscript{371} that is, we respond more quickly to acquired associations that are largely involuntary.\textsuperscript{372}

These automatic associations or implicit biases can now be reliably tested at an unconscious level.\textsuperscript{373} The Implicit Association Test (IAT)\textsuperscript{374} is the leading social science measure of this type of unconscious response.\textsuperscript{375} There is a wealth of literature, including meta-analyses, on the IAT generally and on its relationship to explicit bias and its value as a predictor of the same.\textsuperscript{376} While most researchers support the IAT as an accurate measure of implicit bias,\textsuperscript{377} the research is not unanimous.\textsuperscript{378} Nevertheless, as the use of the IAT has increased, there has been an explosion of research in both social and neuroscience arenas concerning implicit bias,\textsuperscript{379} and the social science is increasingly confirmed by neuroscience research.\textsuperscript{380}

For example, functional magnetic resonance imaging (fMRI) (evidenced by the higher blood oxygenation level throughout the brain)\textsuperscript{381} of the amygdala (the part of the brain identified as involved with emotional reactions) has found activation response to be predictive of race bias when measured indirectly by the IAT even if not shown when measured explicitly by (self-reported) responses to the Modern Racism Scale.\textsuperscript{382}

IAT results can be surprising and disturbing, perhaps particularly so for those who consider themselves egalitarian but whose IAT results show the typical American preferences for European American as compared to African-American, the abled as compared to the disabled, and for women with families as compared to women with careers.\textsuperscript{383} Surprising or not, these results can be connected with real world response: “Notably, implicit attitudes show predicative validity; the magnitude of preference exhibited on the test predicts a host of discriminative behaviors, from nonverbal avoidance to evaluating an individual’s work.”\textsuperscript{384}

**Acknowledging that prior intervention has not proven sufficient.**

Decades of study and calls for action have not removed concerns about disproportionality along the educational pipeline and in juvenile justice. The Coleman Report in 1966 on educational opportunity,\textsuperscript{385} the two National Research Council reports on special education in 1982 and 2002,\textsuperscript{386} and the National Coalition of State Juvenile Justice Advisory Groups Report on the Delicate Balance to the President, the Congress, and the Administrator of the Office of Juvenile Justice and Delinquency Prevention in 1989,\textsuperscript{387} all identified the issue. These studies have been followed by study after study and call after call for action as disproportionality is identified and decried all along the school-to-prison pipeline.

There have been legislative and regulatory responses. Discrimination on the basis of sex,\textsuperscript{388} race,\textsuperscript{389} or disability\textsuperscript{390} is unlawful. Specific Congressional mandates define and address disproportionality concerns. IDEA\textsuperscript{391} and the Juvenile Justice and Delinquency Prevention Act\textsuperscript{392} specifically require monitoring and reporting on this very point; and NCLB’s mandate on disaggregated data serves a similar purpose.\textsuperscript{393} Although the nation stands publicly committed to equality and equity in educational opportunity and juvenile justice,\textsuperscript{394} such government interventions, including related
regulatory enforcement, have yielded change, but these approaches remain limited, costly, and, in some cases, controversial. 395

Similarly, the extensive work of many public interest groups has proved extremely valuable. Still, that the data and research continues to show sustained and substantial inequality suggests that past explanations are inadequate and approaches insufficient. 396 A quick internet search on school improvement strategies to close the seemingly intransigent achievement gap 397 easily yields well over four million results including entries from leaders such as the NEA, the NAACP, and other organizations committed deeply and historically to these efforts. 398 A similar search for various aspects of the school-to-prison pipeline garners similar results. Reviewing the scope and history of these seemingly intransigent differences—setting after setting, decision after decision, outcome after outcome—is important background for offering a new approach to answer the question why change remains so slow? 399

Summary of implicit bias research and its implications for the school-to-prison pipeline.

The following summary of concepts of implicit bias research suggests how an understanding of implicit bias and its implications might offer a new approach for understanding and decreasing disproportionality in education and juvenile justice decisions:

- Implicit biases are measurable by social psychology and neuroimaging. 400
- Implicit biases are “pervasive.” 401
- Implicit biases are different from what we self-report. 402
- IAT results show high levels of implicit bias against the disabled (76% of the sample show a pro-abled implicit preference, 9% pro-disabled). 403
- IAT results show that women are more strongly associated with family and men more strongly with careers (76% of the sample show women-family preference, 6.3% women career preference). 404
- IAT results show that women are more strongly associated with liberal arts, and men more strongly with science (72% show men-science preference, 4%, a women-science preference). 405
- IAT results show high levels of implicit bias against African-Americans (70% of the sample show a pro-white implicit preference, 12% pro-African-American). 406
- Implicit biases are sensitive to being primed. 407
- Implicit biases may “become activated automatically, without a person’s awareness or intention, and can meaningfully influence people’s evaluations and judgments.” 408
- Implicit biases are often dissociated from what a person actively and honestly believes or endorses. 409
- But are not necessarily dissociated from—indeed often predictive of—explicit action or decisions. 410
- Implicit bias may cause some youth to seem more threatening than others. 411
- Implicit biases are more prevalent in ambiguous situations. 412
Implicit biases can cause anxiety. Implicit biases can cause misremembering.

These errors are related not to consciously racist attitudes or preferences but to participants “systematically and implicitly mak[ing] stereotype-driven memory errors.”
—Levinson, Forgotten Racial Equality

Implicit bias reduces student academic performance. Implicit bias is at play in discretionary situations and influences disciplinary and other youth related decisions.

Summary of group dynamics research and its implications for the school-to-prison pipeline.

The findings on implicit bias are augmented by a second area of social science research, which considers group dynamics. We all are part of cultural groups, and cultural groups are one of the major categorization mechanisms that all humans use to process information. Traits that define cultural groups include race, ethnicity, religion, gender, sexual orientation, national origin, family, or professional status.

The following summary of concepts of group-oriented research suggest how an understanding of group dynamics and in-group preference might offer a new approach for understanding and decreasing disproportionality in special education and other education and juvenile justice decisions:

Categorization of and preference for people based on group identity is a normal, fundamental process of the human brain.

“[M]ere classification of people into social groups allows people to understand others with regard to one or a few main characteristics, such as their age, gender, social role, physical appearance, or relation to the self. One should not confuse the process of categorization, which facilitates the ability to think clearly, with the “cultural baggage” associated with these categories.”
—Eberhardt, Confronting Racism

Culture and cultural groups link to decisionmaking. Our automatic group identification is significant. We make connections when someone appears or is labeled a certain way. We tend to prefer our own, no matter how we define our own. Our response is influenced by our self-concept, which transfers to others like ourselves. Without conscious attention, we start with this assumption: If I am good and I am white, then white is good . . . and you are white, then you are also good.

In-group members (however defined) enjoy a presumptive advantage as to expectations and response.
• Differences between groups are exaggerated and those in the out-group are viewed as worse, not as competent or warm as the in-group, more threatening.\textsuperscript{427}

• The attitudes of one’s group influence an individual group member’s attitudes.\textsuperscript{428} For example, if our fellow teachers have an association regarding certain groups of students, then we will likely follow suit.

• Group identification, or mismatch,\textsuperscript{429} can impact a wide range of behaviors and decisions—placement, class participation, engagement, evaluation, referral for special education, discipline, and on along the pipeline.\textsuperscript{430}

• There is particular significance in school and juvenile justice settings where the teaching and administrative force remains largely White and the population increasingly of color.\textsuperscript{431}

Figure 35. U.S. Teacher Population by Race & Ethnicity\textsuperscript{432}

Figure 36. Federal Prison Staffing by Race & Ethnicity\textsuperscript{433}
Summary of micromessaging research and its implications for the school-to-prison pipeline.

Group dynamics are reinforced then again by what we know about micromessaging. Like implicit bias and group dynamics, micromessages can involve implicit unconscious communications and results. The following summary of micromessaging suggests how an understanding of these concepts might offer a new approach for understanding and decreasing disproportionality:

- Micromessages can be either affirming (conveying inclusion and respect, for example having your class contribution meaningfully acknowledged) or negative (conveying disrespect, for example being ignored when you volunteer an answer in class).
- If you are in my in-group, you are more likely to be the recipient of micro-affirmations than microinequities.
- Once received, positive or negative, micromessages accumulate and influence behavior.
- These messages can have power for the recipient and others. For example, when a person with higher status acknowledges someone, that acknowledgement influences others to also think better of the acknowledged person; the reverse is also true.
- Micromessages can influence learning dynamics and interactions of youth with teachers and juvenile justice personnel.

Putting Implicit Bias together to understand the pipeline.

Implicit bias, group dynamics, and micromessaging, have obvious implications for teachers and others who deal with young people and the messages they send day in and day out, and for the students who receive them, also day in and day out. For example, consider a teacher who decides that a student’s name is too hard to learn to pronounce so calls that student “Frank” (which is the teacher’s name) to the amusement of the rest of the class. Or a teacher who only calls on certain students, or only continues a dialogue with certain students, and disregards others—sending a message both to those students who are engaged and to the rest of the class.

When implicit bias and its correlates in group dynamics and messaging are read together with what we know about the delivery of public education and juvenile justice overall, the ramifications are obvious. The teaching force, which is at least 83.5% white and 56% female (in Special Education, 83.9% white and 72.5% female), will most likely share the implicit biases shown by other Americans for white, abled, and women-and-families.

There is evidence that these perceptions—again, albeit unintentional—will directly influence student outcomes, particularly so for students of color and students with disabilities. For example, Russell Skiba and his colleagues have found that “when the teacher thought the child was either black or Hispanic, he or she more often judged special education placement as appropriate compared with when the teacher believed the child was white.” Beth Harry and her colleagues found similarly that negative beliefs about African-American families are pervasive among educators and
influenced special education evaluation in harmful ways.\textsuperscript{448} A recent study by Drew Jacoby- Senghora, Stacey Sinclair, and Nicole Shelton demonstrated that increased anxiety and reduced student learning in White instructor/Black student situations are such that “instructors’ implicit bias affects their lessons and their students’ subsequent performance irrespective of instructors’ explicit prejudice.”\textsuperscript{449} Another study by Linda van den Bergh and her colleagues in the Netherlands documents these very concerns and confirms, in an education setting, the significance of comparisons of implicit and explicit measures of bias.\textsuperscript{450} This study of teachers and elementary students found that differential teacher expectations were related to the size of the ethnic achievement gap and to teachers’ implicit prejudice, as measured on an IAT. Teachers showing greater biases “appeared more predisposed to evaluate their ethnic minority students as being less intelligent and having less promising prospects for their school careers.”\textsuperscript{451}

The teacher and societal perceptions highlighted by Jacoby-Senghor, van den Bergh, and others also have an indirect negative impact as a foundation for stereotypes turned inward as stereotype threats.\textsuperscript{452} Students know how they are perceived and labeled.\textsuperscript{453} Young people perceive the unfairness inherent in these labels;\textsuperscript{454} they understand the societal perceptions that create them and turn them inward in what is described as stereotype threat (or stereotype consciousness), a threat which can further negatively impact student performance.\textsuperscript{455} A phenomenon first identified by psychologist Claude Steele and now well documented across a wide variety of groups,\textsuperscript{456} stereotype threat describes the anxiety students experience because of societal stereotypes (girls aren’t good at math),\textsuperscript{457} even where students do not believe the stereotype.\textsuperscript{458} Girls’ performance lessens as they worry about confirming the stereotypes about their group: I am a girl, girls are not expected to be good at math, and this is a difficult math test.\textsuperscript{459} Like other aspects of disengagement, stereotype threat demonstrably lowers student achievement,\textsuperscript{460} and may reduce student interest in a particular domain of study.\textsuperscript{461} While research specifically on this point for special education remains to be developed, one can readily imagine the impact of race/ethnicity connections with the label of seriously emotionally disturbed or intellectually disabled.

De-biasing is possible and necessary; new training, de-biasing tools, and system monitoring is called for.\textsuperscript{462} Research continues to mount as to effective approaches to interrupt and suppress reflexive responses in appropriate situations—de-biasing.\textsuperscript{463} The research supports initiatives that train us to engage in more intentional and mindful reflection to avoid implicit biases at critical decision points.\textsuperscript{464} This report recommends this training for decision makers all along the education and school-to-prison pipeline. Once de-biased, it is likely that our education system will look very different from the disproportional picture it presents today. What is needed is a commitment of resources to appropriate training to this end.\textsuperscript{465}

**New Response to the School-to-Prison Pipeline: A Focus on Implicit Bias**

Previous sections of the report reviewed implicit bias, group dynamics and micromessaging, all unconscious responses that often influence decisions in
unintended ways and result in unintended results, thought by many to account in part for the disproportionalities identified. The differences in expectations and results previously discussed play out in specific arenas and cry out for individuation rather than group-triggered response.

It is easy to conceptualize how a White female educator or decision-maker, facing a decision involving disciplining a twelve year old African-American boy who was involved in a shoving incident finds herself in a context where race has been shown to matter (at least implicitly). That white educator is more likely to implicitly respond negatively to him (than to a similarly situated White boy), based on implicit associations and group identification. If she is in a poor, urban school with a majority of students of color, there are more likely to be School Resource Officers present. She is more likely to call for help from the SRO than to send the boy to the principal’s office or some lesser intervention. When the SRO arrives he/she is likely to view the scene less favorably than he/she might for a white student, especially if the teacher labels the offender as a troublemaker. As the incident proceeds along, it is also easy to see how misremembering might come into play and the behavior of the Black boy remembered as more aggressive. And these first decisions will carry on along the pipeline, where this young student will more likely find himself arrested and detained.

When these implicit dynamics are viewed in the context of the tremendous discretion at play along the pipeline, in decisions like this one and in so many others, including discretionary special education decisions, discretionary referral to law enforcement, discretionary arrest and detention, the critical role of the decision maker is obvious. As one of the recent supplementary papers issued by the Disparity Collaborative summarizes:

[T]here is clear evidence that children of color are punished more severely than White children for relatively minor, subjective offenses in schools. These are the very types of behaviors that require judgment and discretion by the decision-maker in determining punishment. There is also research that illustrates how the implicit biases or assumptions held by adults with decision-making authority lead to harsher treatment of Blacks than Whites for similar behaviors. Considered in tandem, these two sets of studies strongly suggest that implicit racial bias contributes to the differential treatment of children of color—particularly Black boys—in school settings.

That is, what we know about implicit associations and biases call for a pause in the process. Not every decision is one that calls for a stare not a blink, but some are. That the decision maker needs to be deciding without bias, explicit or implicit, is also critical. In its recent report on Reforming Juvenile Justice, the National Academies of Science highlighted the importance of addressing bias in discretionary decision-making for juvenile justice, though their conclusion is equally important to decisions further back on the school-to-prison pipeline:

Because bias (whether conscious or unconscious) also plays some role, albeit of unknown magnitude, juvenile justice officials should embrace activities designed to increase awareness of unconscious biases and to
counteract them, as well as to detect and respond to overt instances of discrimination. Although the juvenile justice system itself cannot alter the underlying structural causes of racial/ethnic disparities in juvenile justice, many conventional practices in enforcement and administration magnify these underlying disparities, and these contributors are within the reach of justice system policy makers.475

As the Academy suggests, it is in reach of decision makers to bring about change becoming aware of the implicit aspects of their decisions and responding with conscious attention to the individual. One can now imagine a context where the decision makers have become aware of their implicit biases, where before the teacher calls for the School Resource Officer she quickly asks herself, Would I be doing this if this were Emily, a twelve-year-old white girl in my class? Or where the SRO presence is minimal or not existent and the student is sent to the principal, who asks him/herself the same type of questions. Or if an SRO is called, he/she has been trained with a quick checklist of points to consider. Or if the student is to be suspended, a lawyer or law student is present to represent him and so on down the line.
Overview of Town Hall Meetings

Background Information Provided for 2014–15 Town Halls

The issue: For too many of our young people, particularly those who are Black, Hispanic, American Indian, disabled, LGBTQ, and/or low-income, the education pipeline stands broken, and the doors to meaningful education remain closed. The problem is particularly acute in regard to students being pushed or dropping out of school, often into the juvenile or prison system—the so-called school-to-prison pipeline. Disproportionality—where certain racial or other groups are represented out of proportion to their student numbers—remains virtually unchecked in regard to academic achievement, discipline, suspension, and expulsion and in regard to certain special education categorizations and placements. The disproportionate minority contact in juvenile justice and delinquency matters is equally troubling. While the availability and visibility of data on pipeline issues is increasing, the problems have been known for decades and have been resistant to change.

The issues posed by the school-to-prison pipeline are a civil rights challenge for our society. The economics alone are enough reason to address it: Students who drop out or are pushed out of school are disengaged first as students and then as citizens; they lose earning capacity; they become more dependent on welfare or join the expensive prison population. The U.S. spends an average of $12,136 per year per student while states’ average per inmate cost is over twice that, $31,286; and juvenile detention even higher, an estimated $87,981 per year.

The goals: The Town Halls use the convening power of the ABA to host a series of national gatherings of key individuals and organizations 1) to call particular attention to the role of the legal community in addressing pipeline issues; 2) to direct focus to the role implicit bias may play in these issues; 3) to recognize ongoing research and programmatic intervention and allow opportunity for networking to support replication of successful efforts; and 4) to develop an action plan to address the components of the school-to-prison pipeline dilemma.

The typical format: The Town Halls follow a proven format for engagement for change. The first hour features an expert panel drawn largely from the local area and led by two experienced ABA moderators. The panelists speak to the designated topic area and to their experience with pipeline programs and interventions. The second hour opens the program to the audience for questions, comments, and discussion. The formal program is followed by an informal networking opportunity, and, where possible, a reception hosted by local participants.

Within this framework, the Task Force held eight Town Hall meetings and a roundtable discussion during 2014 and 2015. The purpose of these meetings was to understand the causes and effects of the school-to-prison pipeline at different regions of the country, connect constituencies and individuals interested in reversing
these negative trends, recognize ongoing research, discuss potential solutions, and
showcase successful local programmatic interventions.

Introductory Note: Because we did not have court reporters at each Town Hall,
we are unable to reproduce full testimony here, though all was considered in
formulating the report’s recommendations. The materials that follow provide a
glimpse of what the expert panels offered during the Town Halls, but cannot begin
to reflect the depth and breadth of knowledge experts brought to the sessions.

Chicago Town Hall Meeting – February 7, 2014

The inaugural Town Hall was convened at the ABA midyear meeting in Chicago
to discuss issues posed by the school-to-prison pipeline. Entitled, “The School-to-
Prison Pipeline: What Are the Problems? What Are the Solutions?” the Town Hall
offered expert information on the nature of the problem, together with presentations
of local Chicago leaders who have programs on the ground to help find solutions.
Speakers provided an overview of the problems associated with the school-to-prison
pipeline; discussed the role that implicit bias plays in producing disparities relating
to disciplining students; and discussed the role that lawyers can take to prevent more
students from becoming involved in the justice system.

The first Town Hall aptly illustrated the convening power of the ABA and brought
together an expert panel and an extraordinary audience (a standing room only
crowd, almost all of whom stayed for the entire program). Those commenting and
writing about the session uniformly lauded the ABA’s ability to connect people
from different perspectives who came armed with varying solutions; they also praised
the Town Hall emphasis on facilitating taking action and implementing real solutions
at all levels. One example illustrates the potential here: Three law students traveled
from New Orleans (sponsored by their deans at Tulane and Loyola) to talk about
Stand Up For Each Other (SUFEO), where New Orleans law students represent
K-12 students in suspension hearings; Chicago area law students attended as well,
took these young people out for lunch, and started a conversation about replicating
SUFEO in Chicago (which they did).

Speakers included:

- Julie Biehl, Professor, Children and Family Justice Center, Bluhm Legal Clinic,
  Northwestern University School of Law, Chicago, Illinois
- Nancy Hietzeg, Professor, Sociology and Critical Studies of Race and Ethnicity,
  St. Catherine University, St. Paul, Minnesota
- Justice Michael Hyman, Chair of the ABA Coalition on Racial and Ethnic
  Justice
- Mariame Kaba, Project NIA, Chicago, Illinois
- Sarah Redfield, Professor of Law Emerita, University of New Hampshire School
  of Law
- Robert Saunooke, Law Offices of Robert Saunooke, Miramar, Florida, and legal
  and policy advisor to the chairman, Seminole Tribe of Florida
- Wesley Sunu, Tribler Orpett & Meyer
• Dr. Artika Tyner, Community Justice Project, Clinical Faculty, Director of Diversity, University of St. Thomas Law School, Minneapolis, Minnesota
• Rev. Janette Wilson, National Rainbow PUSH Coalition, Chicago, Illinois

Selected points from the testimony:

• The problem is “our” fault, the fault of all adults in our community.
• The problem is a complex web of mass incarcerations, which is extremely difficult to exit.
• That children enter the web through an interaction with a police officer, which commonly occurs at school, is an improper role for police officers in Chicago schools.
• Currently in Chicago, two police officers are stationed within each Chicago school, and eighty-four percent of arrests occurring in these schools are for misdemeanor offenses.
• Reframing policing in schools is absolutely necessary.
• Reverend Wilson discussed the punitive environment that permeates many schools and maintained that we are “feeding bodies to the criminal system.”
• Dr. Tyner maintained that we are depriving too many youth “of meaningful opportunities for education, future employment, and participation in our democracy.”
• Ms. Kaba reminded participants that the school-to-prison pipeline is “almost a misnomer in some cases;” “we should really be talking about a community-to-prison pipeline or a cradle-to-prison pipeline. It starts even before young people enter the school building.” She also observed that matters that school principals and counselors should handle are being handled by police.
• Professor Heitzeg observed that students are indirectly funneled into the justice system through suspension and expulsion policies and directly routed through the growing number of police in schools.
• Mr. Saunooke pointed out that the lack of funding for education contributes the pipeline and observed that teachers, especially in schools that serve high concentrations of Native American students, rarely stay more than two or three years.
• Professor Biehl emphasized that students need to remain in school and that we should not revoke parole for students because they were not in school and incarcerate them, which inhibits their ability to obtain an education. Professor Biehl also debunked the myth that a juvenile’s record is confidential. She maintained that a young person’s record can be significant barrier to school reentry, employment, financial aid for college, and housing.
• Participants observed that to successfully interrupt the pipeline, schools must focus on ideas of community and cultural understanding.
• Participants identified numerous factors that pose a challenge to dismantling the school to prison pipeline, including implicit bias, funding, and related trends in education, but collective action beyond the dialogue is needed to achieve change.
“Before we push children into a criminal system, we need to push them into a loving setting that allows them to understand the consequence of negative behavior.”
—Reverend Wilson.

Boston Town Hall Meeting – August 8, 2014

The second Town Hall was held at the annual ABA meeting in Boston. Speakers provided an overview of the problems and consequences of the school-to-prison pipeline. Again, it was an extraordinary panel of experts and an extraordinary audience. The panel and audience focused on the excellent on the ground programs in Massachusetts (including legislation and class action litigation on point); discussed the role implicit bias plays in producing disparities along racial lines; discussed the disproportionate effect that school’s current punitive policies and actions have on students with disabilities, and discussed certain initiatives that organizations and schools in Massachusetts are taking to reverse these trends. As was the case in Chicago, after the Town Hall, speakers continued to engage in extended networking conversations on next steps.

Speakers included:

- Robert Fleischner, Assistant Director, Center for Public Representation, Northampton, Massachusetts
- Damon Hewitt, Senior Advisor, U.S. Programs, Open Society Foundations, New York, New York
- Mike Ortiz, Staff Counsel, Student Services, Lowell Public Schools, Lowell, Massachusetts
- Sarah Redfield, Professor of Law Emerita, University of New Hampshire School of Law
- Marlies Spanjaard, Director of Education Advocacy, The EdLaw Project – Children’s Law Center of Massachusetts and the Committee for Public Counsel Services, Boston, Massachusetts
- Wesley Sunu, General Counsel, Sentry Insurance a Mutual Company
- Judge Gloria Y. Tan, Middlesex County Juvenile Court, Massachusetts

Selected points from the testimony:

- While there has been some traction on aspects of school-based discipline, the conversation has to be more comprehensive and include discussions on class and race.
- Mike Ortiz, Staff Counsel for Lowell Public Schools, stated that the phrase “school-to-prison pipeline” is too narrow and argued that “community-to-prison pipeline” more accurately reflects the scope of the problem. Based on a high poverty level in a community, schools in that community will often encounter students with more emotional and learning disability issues than wealthier schools. As a result, poorer communities become further burdened when their schools are asked to do more but with less resources.
- Judge Tan, Middlesex County Juvenile Court, stated that when children are removed from their home, efforts must be made to ensure they are able to
attend and stay in their school of origin unless it is shown it is not in their best interest.

- Damon Hewitt, Senior Advisor for U.S. Programs, Open Society Foundations, articulated the depth and intransigency of the problem and highlighted that more school resource officers in schools are not the solution.

- Marlies Spanjaard, Director of Education Advocacy for The Edlaw Project, stated that of the districts where people found resource officers helpful, it was not in their arresting function but in their function as additional adults in school buildings. Since schools actually desire more adult presence in their buildings, the better choice is to hire more school counselors and fewer school resource officers.

- Robert Fleischner, Assistant Director for the Center for Public Representation, discussed the federal class action lawsuit against the city of Springfield, Massachusetts and the city’s school system. The lawsuit raises concerns over the school system’s public day programs, which are supposed to provide alternate pathways for students with disabilities. Bob added that the case claims that students are facing segregation in violation of the Americans with Disabilities Act. Because the ADA requires that public schools provide services in integrated environments, this segregated setting denies them equal educational opportunity.

Houston Town Hall Meeting – February 6, 2015

The third Town Hall meeting took place in Houston, Texas, in connection with the ABA’s 2014 mid-year meeting. Speakers discussed the issues and consequences of the school-to-prison pipeline and local initiatives to reverse these trends.

Speakers included:

- Marilyn Armour, Director, The Institute for Restorative Justice and Restorative Dialogue, University of Texas, Austin, Texas
- Cynthia D. Mares, President, Hispanic National Bar Association
- Miner “Trey” P. Marchbanks, Texas A&M University, Public Policy Research Institute
- Wykisha McKinney, Child Health Outreach Program Manager, Children’s Defense Fund Texas
- Pamela Meanes, President of the National Bar Association
- Mary Schmid Mergler, Director, School-to-Prison Pipeline Project, Texas Appleseed
- Sarah Redfield, Professor of Law Emerita, University of New Hampshire School of Law
- Wesley Sunu, General Counsel, Sentry Insurance a Mutual Company

Selected points from the testimony:

- Pamela Meanes, President of the National Bar Association, identified the school to prison pipeline as one of the many reasons for achievement gaps between black and white students. Ms. Meanes stated that it is in our collective interest to educate schools on how to fix this issue and discussed programs, such as the use of classical academies, which are schools that students have the option to
attend as an alternative to jail. Unlike an alternative school, this is a “regular”
school where students are engaged and educated. Additionally, the role of men-
tors in all fifty states, as well as programs conducted by Alpha Kappa Alpha, for
example, have played a role in diverting students away from the justice system
at an early age.

- Methods that schools can use to better handle disciplinary matters need to be
  identified to avoid the streamlined path into prison caused by swift referral of
  students to school police officers and the juvenile justice systems for catch-all
  offenses/Class C crimes.

- Dr. Armour, the Director of the Institute of Restorative Justice and Restorative
  Dialogue discussed the vast improvement that the “RJ Project” has produced in
  specific school districts. Ms. Armour stated that this new technique has reduced
  eighty-four percent of out of school discipline, as well as dropped tardiness by
  thirty-nine percent. By changing the school climate and shifting the focus on
  altering the punitive model, Ms. Armour explained that shifting the focus to
  building relationships, rather than punishing students, will halt the school to
  prison pipeline.

- Dr. Marchbanks, of the Public Policy Research Institute at Texas A&M, dis-
  cussed the “Breaking School Rules” study, which looked to individual, school
  level data for every student in the state of Texas in grades seven through twelve.
  Mr. Marchbanks explained that if a student is suspended in Texas, the state
  must be notified of the occurrence of, and reason for, the suspension. Further,
  school data was linked to the justice system, because each time a student was
  referred to the justice system, the state was made aware. The study found that
  sixty percent of students in Texas were suspended at least once, and while dis-
  crepancies were bad, even white students experienced a fifty percent suspension
  rate. Therefore, proper leadership and school policies are needed to mitigate
  the negative academic outcomes and increased social costs associated with
  suspensions.

- Cynthia Mares, President of the Hispanic National Bar Association, reported
  additional statistics on the school to prison pipeline. While discussing what is
  being done to solve this problem, Ms. Mares talked about groups that have
  come together to advocate as a community. Once such group is “Law School
  Sí Se Puede,” which helps students gain acceptance into the law school of their
  choice by providing mentoring and funding for the LSAT.

- WyKisha McKinney, Child Health Outreach Program Manager of the Children’s
  Defense Fund – Texas, further discussed the importance of sending students
to counseling instead of funneling them straight to the juvenile justice system,
which can be achieved through the creation of new codes, greater parental
involvement in the classroom, and continued advocacy.

- Additionally, in her discussion of how to reduce the number of students who
  are entering into the school to prison pipeline, Mary Schmid Mergler, Director
  of the School to Prison Pipeline Project (Texas Appleseed), stated that internal
drivers, as well as direct referrals to the juvenile justice system by school police,
are forcing students into the pipeline. Ms. Mergler stated that school policing
must be altered to decrease school arrests.
• This should not be the last discussion on how to solve the school to prison pipeline, as continued help with advocacy is needed to solve this problem in all states and school districts.

Washington, DC Town Hall Meeting – February 26, 2015

The fourth Town Hall occurred in the District of Columbia at Jones Day, in conjunction with the Criminal Justice Sections Collateral Consequences Summit. Speakers discussed issues of the pipeline from a national perspective, focusing on the disproportionate effects of disciplinary policies on students of color and students with disabilities and the role of federal policy and interventions.

Speakers included:

- The Honorable Bernice Donald, 6th Circuit Court of Appeals & incoming Chair Criminal Justice Section of the ABA
- Renee Wolenhaus, Deputy Chief, Educational Opportunities Section, Civil Rights Division, Department of Justice
- Lara Kaufmann, Senior Counsel & Director of Education Policy for At-Risk Students, National Women’s Law Center
- Dawn Sturdevant Baum, Senior Attorney Department of the Interior, Indian Education Team Leader, Division of Indian Affairs, Office of the Solicitor
- William Alvarado Rivera, past President of the Hispanic Bar of the District of Columbia and Deputy Chief Counsel, US Department of Health and Human Services
- Barbara R. Arnwine, President & Executive Director of the National Lawyers’ Committee for Civil Rights Under Law (Lawyers’ Committee)
- Kristin Harper, Special Assistant, Office of Special Education and Rehabilitative Services, U.S. Department of Education
- Sarah Redfield, Professor of Law Emerita, University of New Hampshire School of Law, Moderator

Selected points from the testimony:

- Highly punitive measures do not improve safety nor do they improve performance.
- Lara Kaufmann observed that our failure to address issues in students such as trauma leads to students acting out and that we need to train educators better to understand the role implicit bias plays in disproportionalities associated with student discipline.
- William Rivera, Deputy Chief Counsel of the Office of General Counsel at the U.S. Department of Health and Human Services, provided data indicating that the disproportionate use of discipline starts early in pre-schools. As a solution to pre-school expulsion, he recommended that pre-schools use Positive Behavioral Intervention & Supports (PBIS) instead of expelling these students.
- Barbara Arnwine reminded participants that Minneapolis School District dramatically reduced its student suspension rate by placing a moratorium on suspending students in early grades, having higher-level school administrators
review suspensions and expulsions of students, and reducing the police presence in the schools.

- Kristen Harper maintained that when students are incarcerated, that we must educate them better, focusing on improving their reading skills. This will ease the transition back into society upon their release.

Arizona State University Town Hall Meeting – March 27, 2015

The fifth Town Hall meeting occurred at the Arizona State University Sandra Day O’Connor College of Law. It was held in connection with a symposium hosted by the Arizona State Law Journal and had a special focus on school-to-prison pipeline problems in Indian Country. This convening included both a Town Hall session and a research symposium, the papers from which will be published in the Arizona State Law Review.

Speakers included:

- Denise E. Bates, Interdisciplinary Studies and Organizational Leadership Faculty, College of Letters and Sciences, Arizona State University
- Bryan McKinley Jones Brayboy, Special Advisor to the President, Professor of Justice and Social Inquiry; Director, Center for Indian Education, School of Social Transformation, Arizona State University
- Nicholas Bustamante, M.S. student in Justice Studies and Social Inquiry
- Jeremiah Chin, Ph.D. and J.D. candidate, Research Associate, Center for Indian Education, Arizona State University
- Tiffani Darden, Associate Professor of Law, Michigan State University College of Law; Chair, AALS Education Law
- Philip S. (Sam) Deloria, Director, American Indian Graduate Center
- Patty Ferguson-Bohnee, Faculty Director, Indian Legal Program, Sandra Day O’Connor College of Law
- Sheri Freemont, Director, Family Advocacy Center, Salt River Pima-Maricopa Indian Community
- Leonard Gorman, Director, Navajo Nation Human Rights Commission
- Jenifer Kasten, Director of Public Policy, Decoding Dyslexia Arizona
- John Lewis, Former Executive Director, Inter Tribal Council of Arizona
- Dr. Laura McNeal, Assistant Professor of Law, Brandeis School of Law, University of Louisville
- Jason Nance, Associate Professor of Law, Associate Director of Education Law and Policy for the Center on Children and Families, University of Florida Levin College of Law
- Guenevere Nelson-Melby, Assistant Juvenile Public Defender, Pima County Juvenile Court
- Stephen Pevar, Senior Staff Attorney, American Civil Liberties Union, Racial Justice Program
- Claire Raj, Assistant Professor, Clinical Program, University of South Carolina School of Law
• Sarah E. Redfield, ABA Coalition on Racial and Ethnic Justice, University of New Hampshire School of Law
• Dr. Charles “Monty” Roessel, Director, Bureau of Indian Education
• Kenneth G. Standard, Board of Governors, American Bar Association
• Dr. Sabina E. Vaught, Associate Professor of Urban Education, Tufts University
• Malia Villegas, Director, Policy and Research, National Congress of American Indians
• Vanessa Walsh, J.D. candidate, S.J. Quinney College of Law
• Ron J. Whitener, Associate Judge, Tulalip Tribal Court; Affiliated Assistant Professor of Law, University of Washington School of Law
• Dorothy (Dottie) Wodraska, Director of Juvenile Transition, Maricopa County Education Services Agency

Selected points from the testimony:

• As a result of their rural geography and concentration in medically underserved areas, Native students face unique health issues. Among these issues is toxic stress, a condition caused by adverse experiences in childhood that occur without the buffer of supportive relationships. To help address the effects of toxic stress, the panelists proposed federal policies that aim at fostering resilience.

• Native students are more likely to experience poverty.

• All these factors have led to a lack of academic achievement among Native students.

• Dr. Bryan Brayboy, President’s Professor and Borderlands Professor of Indigenous Education and Justice in the School of Social Transformation at Arizona State University, made several recommendations, including preparing all teachers to work in, with, and for Native communities, re-prioritizing the school process for Native children, connecting Native languages and cultures in both curriculum and pedagogy, and funding these efforts at the same level we fund prisons.

• Guenevere Nelson-Melby, Assistant Juvenile Public Defender for Pima County Juvenile Court, discussed her participation in a taskforce that created a rubric to minimize law enforcement calls by schools. This rubric uses objective criteria in the form of a checklist model to determine when police involvement is necessary and seeks to reduce disproportionate minority contact throughout the juvenile criminal system. Based on preliminary numbers, this rubric has significantly decreased arrests throughout several school systems in Pima County.

• Dr. Charles Roessel, Director of the Bureau of Indian Education, discussed his undertaking of a major reform endeavor of the Bureau of Indian Education to create a school improvement agency.

• Sheri Freemont, Director of the Salt River Pima-Maricopa Indian Community Family Advocacy Center, discussed the SRPMIC Multi-Disciplinary Team (MDT) Model. She credits the model’s success to the fact that it is applied to all incidents regardless of the severity of the incident. The MDT consists of core and secondary team members who meet biweekly for updates, training, and challenges, and meet at any time as needed for immediate needs.
New Orleans Town Hall Meeting – April 14, 2015

The sixth Town Hall meeting was held in conjunction with the Section of Litigation Annual Conference 2015 at Loyola University New Orleans College of Law. Speakers discussed the problems and consequences of the school-to-prison pipeline generally; specific problems associated raised by charter schools; and local initiatives that schools and organizations are taking to reverse these trends.

Speakers included:

- Christopher Bowman, Counselor to the District Attorney, Orleans Parish District Attorney’s Office
- Nancy Degan, Chair, ABA Section of Litigation
- Robert Garda, Professor, Loyola University New Orleans College of Law, Moderator
- Meghan Garvey, Managing Director, Louisiana Center for Children’s Rights
- The Honorable Ernestine S. Gray, Judge, Orleans Parish Juvenile Court
- Eden Heilman, Director, Southern Poverty Law Center
- Rosa K. Hirji, Attorney & Co-Chair, ABA Section of Litigation, Children’s Rights Litigation Committee
- Diane Holt, Attorney, Columbia, South Carolina
- Rahsaan Ishon, Families and Friends of Louisiana’s Incarcerated Children
- María Pabón López, Dean, Loyola University New Orleans College of Law
- Jason P. Nance, Levin College of Law, University of Florida
- Devan Petersen, Foster Youth Advocate, New Orleans
- Dana Peterson, Deputy Superintendent of External Affairs, Recovery School District, New Orleans
- Sarah Redfield, Professor of Law, Co-Chair, ABA Joint Task Force Reversing the School-to-Prison Pipeline, Moderator
- Student Leaders and Students, SUFEO, Stand Up For Each Other, New Orleans
- Rosie Washington, Executive Director, Micah Project, New Orleans
- Gina Womack, Families and Friends of Louisiana’s Incarcerated Children, invited

Selected points from the testimony:

- Meghan Garvey, Managing Director of the Louisiana Center for Children’s Rights, described the Louisiana Charter School System as a fractured system, citing lack of detailed oversight as one of the chief problems facing educators in Louisiana. Moreover, no centralized education office exists that is able to provide resources, such as mental health resources, to all the different schools.
- Eden Heilman, Managing Attorney from the Southern Poverty Law Center, outlined the various entry points into the pipeline and the factors that keep children trapped in the system. To address these issues, she suggested both legal and political strategies including individual client representation, filing administrative complaints to federal agencies, looking at the Individuals with Disabilities Education Act to address issues on a larger systems level, class action litigation, and using legislation and policy to effect change.
Judge Ernestine S. Gray strongly believes students should get the full experience of being meaningfully engaged in school. She stated that if communities want to keep children from becoming arrested or becoming homeless, communities have to work harder to afford these children an education.

Honolulu Town Hall Meeting – April 18, 2015

The seventh Town Hall meeting took place in Honolulu, Hawai‘i in conjunction with the ABA’s Solo, Small Firm, and General Practice Division and the National Asian Pacific American Bar Association. Speakers discussed the school-to-prison pipeline program in Hawai‘i, particularly with respect to native Hawaiians, specific programs in Hawai‘i designed to reverse the negative trends, and sought to develop an action plan to address the unique components of this issue.

Speakers included:

- Carl Ackerman, Director, Clarence T.C. Ching PUEO Program, Punahou School
- Nancy J. Budd, Attorney, State of Hawai‘i Board of Education
- Beth Bulgeron, Academic Performance Manager, Hawai‘i State Public Charter Commission
- Kim Greeley, Attorney, COREJ, Honolulu, Hawai‘i, Moderator
- Jenny Lee, Staff Attorney, Hawai‘i Appleseed Center for Law and Economic Justice
- Justin D. Levinson, Professor, William S. Richardson School of Law, University of Hawai‘i
- Kamaile Maldonado, Office of Hawaiian Affairs
- Mark Patterson, Warden, Hawai‘i Youth Correctional Facility
- The Honorable Karen M. Radius, Founding Judge, Hawai‘i Girl’s Court
- Dr. Karen Umemoto Ph.D., Professor, University of Hawai‘i at Manoa

Selected points from the testimony:

- Too many young people are having the doors to meaningful education closed because they are being pushed out of school and into the juvenile justice system.
- Consequently, these young people are being disengaged as citizens, thus creating a serious civil rights challenge for Hawaiian school districts and society as a whole.
- The shift toward punitive approaches to school discipline does not focus on the root of the problem, which for many native Hawaiians likely relates back to elements of colonialism and intergenerational trauma that has yet to cease.
- Statistics show severe disproportionate treatment of native Hawaiians in schools.
- Turning to the police for educational infractions compounds the problems. This gives a student a criminal mindset before that student ever has the chance to rehabilitate.
- Hawaiian law provides school administrators with a high level of discretion to assess disciplinary situations and impose punishment, which could be a positive-
factor in eliminating the school to prison pipeline if administrators are educated to use suspension as a last resort disciplinary tactic.

• Professor Levinson stated that the role of implicit biases and stereotype threat will always pose an issue, unless specific measures are taken to resolve these issues. Therefore, as Mr. Levinson discussed, it is necessary for us to understand how teachers and other students perceive students at a young age, and how these perceptions affect behavior.

• Judge Radius, referencing the Girls Court, which she founded, emphasized the importance of gender-specific understanding re: delinquency. The Girls Court provides open courtroom sessions and gender-specific programming for girls and their families. Her court has experienced great success in reducing runaways and arrests, as well as helped girls to receive diplomas, enroll in community college, obtain vocational training, become drug free, obtain employment, and mend troubled relationships with family.

• All panelists agreed that to best help students, each department must work together to provide comprehensive mental health care, family involvement, trauma informed care, culturally specific care, and gender specific care.

Miami Town Hall Meeting – May 14, 2015

The last Town Hall meeting for 2015 was held in Miami, FL and hosted by the Wilkie D. Ferguson, Jr. Bar Association and The Law Center at Miami Dade College. Speakers discussed the problems associated with the school-to-prison pipeline generally; and issues and programs unique to Miami school districts.

Speakers included:

• Colleen Adams, Founder & Executive Director, Empowered Youth
• Leigh-Ann A. Buchanan, President, Wilkie D. Ferguson, Jr. Bar Association, Moderator
• Dwight Bullard, Florida State Senate
• Norman Hemming III, Special Counsel, Office of the United States Attorney, Southern District of Florida
• Ruth Jeannoel, Lead Organizer, Power U Center for Social Change
• Christopher Lomax, Associate, Jones Day
• Carlos Martinez, Public Defender, Miami-Dade County Office of the Public Defender
• Marvelle McIntyre-Hall, Law Center Director, Miami Dade College Wolfson Campus
• Arnold R. Montgomery, Administrative Director, Office of Educational Equity, Access, and Diversity, Miami Dade Public Schools
• Jason P. Nance, Associate Professor of Law & Associate Director for Education Law and Policy, Center on Children and Families, University of Florida Levin College of Law, Moderator
• The Honorable Orlando Prescott, Senior Administrative Judge, Eleventh Judicial Circuit Juvenile Division, Miami-Dade County
• Maurice Sikes, Sergeant, Coral Gables Police Department
Selected points from the testimony:

- A call to action is needed to reverse the school to prison pipeline.
- Miami is a unique educational environment, which ultimately calls for unique solutions to eliminate the school to prison pipeline. The role of community programs, such as Empowered Youth is critical. Empowered Youth first enforces character and skill building, and second focuses on job development.
- The focus should be on programs that can give students the opportunity to be cared for and believed in, instead of on zero tolerance.
- Arnold Montgomery, Administrative Director of the Education Transformation Office of the Miami-Dade school system, maintained that zero tolerance policies in schools are not effective in deterring student misbehavior, as they “limit or remove access to experience opportunities to achieve success.” Mr. Montgomery proposed that the solution to dismantling the school to prison pipeline includes three steps. First, schools must have codes of conduct that establish consequences, not punishment, which will balance the need for student safety while optimizing student success. Second, students and their families must be provided with learning opportunities that foster academic excellence, career pathways, and real world learning. Finally, the school district must “create a system of oversight, and build collaborative working relationships between municipal law enforcement agencies, and also juvenile justice systems.”

Chicago Roundtable Discussion – July 31, 2015

This interactive roundtable discussion was presented via the American Bar Association Coalition on Racial and Ethnic Justice, the Council for Racial and Ethnic Diversity in the Educational Pipeline and the ABA Criminal Justice Section. This program was part of the American Bar Association’s 2015 Annual Meeting. The roundtable highlighted what we learned from the Town Hall meetings and focused on solutions that the ABA could support to reverse the negative trends.

Speakers included:

- Paulette Brown, President-Elect, American Bar Association 2014-2015
- Leigh-Ann Buchanan, Business Litigation Attorney; Incoming Chair, COREJ
- Patty Ferguson-Bohnee, Faculty Director, Indian Legal Program; Director, Indian Legal Clinic
- Dr. Nancy Heitzeg, Professor of Sociology, St. Catherine University; Co-Director, Interdisciplinary Critical Studies of Race/Ethnicity Program
- Craig Holden, President, California State Bar
- Sarah E. Redfield, Professor Emeritus, University of New Hampshire School of Law, Moderator
- Jessica Schneider, Staff Attorney, Educational Equity and Fair Housing Projects, Chicago Lawyers’ Committee for Civil Rights Under Law
- Rev. Dr. Janette C. Wilson, Senior Advisor, Operation PUSH, Chicago, IL
Appendix A.
Selected Current Legislative Initiatives

Legislation Eliminating Criminalizing Student Misbehavior that Does Not Endanger Others

Several states have undertaken reforms to reduce the severity of punishments for non-violent infractions. These measures have generally been enacted as part of repealing zero-tolerance policies that mandated suspension or expulsion for certain offenses. In 2013, Oregon repealed its zero-tolerance policy and replaced it with a set of guidelines that limit expulsions to “conduct that poses a threat to the health and safety of students or school employees.” In 2009, Florida significantly amended its zero-tolerance policy to clarify that the provision is “not intended to be rigorously applied to petty acts of misconduct.” The amendment also requires school boards to “[d]efine acts that pose a serious threat to school safety” and thus warrant the application of zero-tolerance.

More sweeping legislation goes beyond the repeal of harsh punishment and prescribes alternative methods of discipline for student behavior that does not endanger others. Legislators in Tennessee and Texas are currently debating bills that would mandate alternative punishments and graduated disciplinary models for truancy offenses. The Florida Senate is considering broader legislation that would prohibit schools from referring students to the criminal justice system for “petty acts of misconduct.” It would also require law enforcement officials to notify a school’s administration of student arrests, thereby creating a barrier between student misconduct and the criminal justice system.

Legislation Eliminating the Use of Suspensions, Expulsions, and Referrals to Law Enforcement for Lower-Level Offenses

Three states have taken concrete steps to reduce the use of suspensions and expulsions as a discipline strategy. In September 2014, California signed Assembly Bill 420, which eliminated “willful defiance” and “disruption of school activities” as a basis to expel students. Further, Assembly Bill 420 also prohibits schools from using those reasons as a basis to suspend students enrolled in kindergarten through the third grade. Connecticut, Louisiana, and the District of Columbia have passed similar laws prohibiting the suspension or expulsion of young students. Georgia and Minnesota are considering such legislation during the current session. Maryland now requires school districts to adopt policies that impose certain requirements on schools before they can suspend or expel a student. For example,
regarding suspensions of ten days or more or expulsion, the superintendent (or his designated representative) must investigate and approve the suspension and meet with the student’s parents. Illinois also passed significant reforms. Under a new law passed in 2015, suspensions of three days or less are allowed only if a student poses a threat to others or “substantially disrupts, impedes, or interferes with the operation of the school.” Suspensions longer than three days, expulsions, or transfers to alternative schools are only permitted if the student poses a threat or significantly disrupts the learning environment, but only after other disciplinary options have been exhausted.

Legislation to Support School Policy and Agreements that Clarify the Distinction Between Educator Discipline and Law Enforcement Discipline

State legislatures should require schools that rely on SROs to enter into written agreements or memorandums of understandings (MOUs), ideally before establishing an SRO program, to ensure that SROs and school officials understand that SROs and other law enforcement should not become involved in routine-discipline matters. There may be philosophical differences between school officials and SROs that must be addressed before SROs begin working inside schools. This MOU should clearly delineate all actors’ roles and responsibilities. A report that evaluated nineteen SRO programs stated that “[w]hen SRO programs fail to define the SROs’ roles and responsibilities in detail before—or even after—the officers take up the posts in the schools, problems are often rampant—and often last for months and even years.” The U.S. Department of Education, the American Civil Liberties Union, the Congressional Research Service, the National Association for School Resource Officers, and the United States Department of Justice. Several states all support the use of MOUs if schools use SROs, including Indiana, Texas, Maryland, and Pennsylvania.

Legislation Requiring and Providing Financial Support for Training of SROs and Police Dealing with Youth on Appropriate Strategies for LGBTQ Students and Students with Disabilities.

In June 2015, Texas passed a law requiring the state’s education commission to create a model training curriculum for SROs. The legislature left the details of the training program to the commission, but it listed several objectives the curriculum must incorporate. These objectives include “positive behavioral interventions and supports” (PBIS), “restorative justice techniques,” “de-escalation techniques and techniques for the limited use of force.” Proposed legislation in several states is also attempting to rectify uncertainty about the role of SROs. Massachusetts House Bill 335 would create a fund to train SROs in de-escalation strategies—“strategies such as restorative justice.” Similarly, New Hampshire House Bill 527 seeks to establish guidelines for SRO education, including at least forty hours of training in techniques like PBIS and restorative justice.
Additionally, a bill under consideration in the Florida Senate would both limit SROs’ authority to arrest students and direct police and school authorities to develop minimum qualifications for the selection of SROs.510

**Legislation Supporting Alternative Strategies to Address Student Misbehavior, Including Restorative Justice**

In May 2015, Indiana it passed a law511 to amend the parameters of the state’s “Safe Schools Fund,” which was created in 1995 with a focus on detecting crime with methods such as drug-sniffing dogs.512 This year’s amendment, in contrast, provides grants for programs designed “to improve school climate and professional development and training” through the development of “alternatives to suspension and expulsion; and . . . evidence based practices . . . [including] positive behavioral intervention and support, restorative practices, and social emotional learning.”513

New education provisions in Colorado,514 Georgia,515 Louisiana,516 Maryland,517 and Pennsylvania518 also recognize the need to implement alternative strategies like PBIS and restorative justice techniques. However, prescriptions for change have not always been explicitly linked to state resources.

Alternative discipline is gaining support in other states as well. Massachusetts, for example, is considering a bill to create a three-year pilot “dropout prevention and recovery program“ that would incentivize schools, through a competitive grant process, to implement “evidence-based” strategies, including “restorative justice and social service referrals.”519 Similarly, a South Carolina bill would create a “Restorative Justice Study Committee” with the aim of developing a pilot program much like the one being debated in Massachusetts.520 California may also require schools to adopt “one or more research-based, whole school approaches, including . . . positive behavior intervention and support, restorative justice . . . [and] social-emotional learning.”521

Washington seems likely to pass Senate Bill 5688, which would allow school districts to use existing funds to develop “multitiered systems of support frameworks [including] . . . positive behavior interventions and supports and social emotional learning.”522

**Legislation Supporting Continued and More Detailed Data Reporting Relating to School Discipline and Juvenile Detention and Disproportionality**

Maintaining and reporting data about each aspect of the school-to-prison pipeline is a basic necessity for reform. This data need be sufficiently disaggregated as to reflect specific state or area conditions as well as national trends. As part of initiatives aimed at reducing exclusionary discipline and criminalization, states have started to require school districts and schools to report detailed information about their disciplinary practices and outcomes.
A recent Connecticut law reining in the authority of SROs, discussed above, requires school boards to submit detailed disciplinary data, which the state department of education will examine and report annually.\textsuperscript{523}

Several states are pushing for more comprehensive reviews of their schools’ disciplinary outcomes. A proposed Pennsylvania resolution would initiate a thorough study of disciplinary policies at state schools and a review of other states’ policies, ultimately establishing an advisory committee to recommend new legislation.\textsuperscript{524} Likewise, an Indiana bill would repeal and replace the state’s existing data reporting requirement with a more detailed one.\textsuperscript{525} Based on the data collected under this new requirement, Indiana’s department of education would develop “a model evidence based plan for improving behavior and discipline within schools.”\textsuperscript{526} Additionally, in Louisiana, the state senate passed a resolution calling for the state’s Board of Elementary and Secondary Education to study the effectiveness of PBIS programs as a means of reducing suspensions and expulsions.\textsuperscript{527}

Connecticut has directed its department of education to disaggregate disciplinary data “by school, race, ethnicity, gender, age, students with disabilities, English language learners” and other categories.\textsuperscript{528} In 2013, Arkansas amended its education code to provide for the collection of data on the “rate of disciplinary disparity” in its schools and to require school boards to implement corrective measures, including restorative justice techniques.\textsuperscript{529} In the current session, a house bill under consideration in North Carolina would update the state board of education’s reporting requirements to include data disaggregated by similar categories, with the express purpose of examining disproportionalities.\textsuperscript{530}

Proposed legislation in other states would go further by mandating reductions in disciplinary disparities or by linking positive changes to funding incentives. For example, Indiana’s House Bill 1558, discussed previously,\textsuperscript{531} would require the state’s department of education to “develop criteria and guidelines for determining the existence of disproportionality in discipline.”\textsuperscript{532} It would also create “the positive discipline practices fund,” under which schools could apply for grants “to assist in the reduction of disproportionality in discipline and to establish positive disciplinary practices.”\textsuperscript{533} Similarly, a Washington bill designed to implement “strategies to close the educational opportunity gap” would create a task force to investigate disproportionalities, design model disciplinary practices, and adapt faculty and staff training to incorporate those practices.\textsuperscript{534}
## Court, School, and Law Enforcement Collaborative Task Force: Guidelines for Schools in Contacting Law Enforcement

<table>
<thead>
<tr>
<th>Term</th>
<th>Reasoning</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td></td>
</tr>
<tr>
<td>Aggravated Assault</td>
<td>Call law enforcement. This is a mandated report.</td>
</tr>
<tr>
<td>Alcohol</td>
<td>Call police unless the alcohol was not consumed, shared, or sold if your security can handle the situation. There is no legal distinction between possession, consumption, sharing, and selling. If there is more than one student involved, then liability concerns lead most schools to make a police report. An online report can be made to document the incident, but not require police to come on site. Many schools also refer to community counseling programs, but some do not have the resources or information to do so.</td>
</tr>
<tr>
<td>Armed Robbery</td>
<td>Call law enforcement. This is a mandated report.</td>
</tr>
<tr>
<td>Arson, of an occupied structure</td>
<td>Call law enforcement. This is a mandated report.</td>
</tr>
<tr>
<td>Arson, of a structure or property (not occupied)</td>
<td>Call unless it causes little or no damage, there are no safety concerns, and no intent to cause harm.</td>
</tr>
<tr>
<td>Assault</td>
<td>Defined as an unwanted physical contact with injury. This term would not be used for a mutual contact without injury, but if there is injury, it is a mandated report.</td>
</tr>
<tr>
<td>B</td>
<td></td>
</tr>
<tr>
<td>Bomb Threat</td>
<td>Call law enforcement. This is a mandated report.</td>
</tr>
<tr>
<td>Bullying</td>
<td>Bullying is not a legal term, but it can represent a range of offenses. The response should be based on the actual offense. If there was a threat, harassment, intimidation, an assault, or the behavior is persistent then administrators should call law enforcement. If a crime was not committed, then do not call law enforcement.</td>
</tr>
<tr>
<td>Burglary/ Breaking &amp; Entering (2nd &amp; 3rd Degree)</td>
<td>Call law enforcement. The definition for burglary does not consider the value of the items; it is about being in a place you are not supposed to be with intent to do something you are not supposed to do. Value and the amount of damage is important but the act of burglary is enough to call.</td>
</tr>
<tr>
<td>Burglary (1st Degree)</td>
<td>Call law enforcement. This is a mandated report. The definition of 1st degree is that it is burglary committed with a deadly weapon or dangerous instrument.</td>
</tr>
<tr>
<td>C</td>
<td></td>
</tr>
<tr>
<td>Cheating</td>
<td>Do not call law enforcement.</td>
</tr>
<tr>
<td>Chemical or Biological Threat</td>
<td>Call law enforcement. This is a mandated report. These could be household items that can be mixed together to be explosive.</td>
</tr>
</tbody>
</table>
## Term

<table>
<thead>
<tr>
<th>Term</th>
<th>Reasoning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Computer and Telecommunications Device</td>
<td>Do not call unless the student commits another violation with a computer or telecommunications device. A computer violation alone would not require law enforcement contact.</td>
</tr>
<tr>
<td>Contraband</td>
<td>Be specific and list the violation under the type of contraband it is. If the student has illegal drugs, it should be documented as a drug violation. If an item is against school policy but legal, then law enforcement should not be called.</td>
</tr>
<tr>
<td>Dangerous Items:</td>
<td>Do not call law enforcement unless the items are used, or there is immediate danger that they will be used. These items are not illegal to possess, but are against school policy. They should be confiscated, and the school should give consequences for possessing them at school, but police should not be contacted.</td>
</tr>
<tr>
<td>Air Soft Gun, BB Gun, Knife (with blade less than 2.5 inches), Laser Pointer, Letter Opener, Mace, Paintball Gun, Pellet Gun, Taser or Stun Gun</td>
<td>Do not call unless there is a specified clear threat to the safety of students, staff, or self. If the situation escalates, the violation should be classified as a higher offense.</td>
</tr>
<tr>
<td>Defiance, Disrespect of Authority, and Non-Compliance</td>
<td>Do not call law enforcement.</td>
</tr>
<tr>
<td>Disruption</td>
<td>Do not call law enforcement.</td>
</tr>
<tr>
<td>Dress CodeViolation</td>
<td>Do not call law enforcement.</td>
</tr>
<tr>
<td>Drug Paraphernalia</td>
<td>Call law enforcement if there is a residue or if there is paraphernalia that is associated with narcotics. The residue is what makes the paraphernalia illegal to possess.</td>
</tr>
<tr>
<td>Endangerment</td>
<td>Using the term endangerment implies that it is a significant event that endangers someone’s life; e.g., a large rock thrown at a moving car, or a bullet going through a wall. If this term is used, then the violation is significant enough to involve the police.</td>
</tr>
<tr>
<td>Fighting^</td>
<td>Do not call law enforcement for mutual combat, although it must be reported to ADE. If there was an injury, or it was not mutual, use the term assault or aggravated assault, depending on who was assaulted, the severity, and whether a weapon was used.</td>
</tr>
<tr>
<td>Fire Alarm Misuse</td>
<td>Call law enforcement. This is a mandated report.</td>
</tr>
<tr>
<td>Firearms</td>
<td>Call law enforcement. This is a mandated report.</td>
</tr>
<tr>
<td>Forgery</td>
<td>Do not call law enforcement.</td>
</tr>
<tr>
<td>Gambling</td>
<td>Do not call law enforcement.</td>
</tr>
<tr>
<td>Term</td>
<td>Reasoning</td>
</tr>
<tr>
<td>-------------------------------------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Graffiti or Tagging</td>
<td>Do not call unless there are at least $250 in damages, which is classified as vandalism, or if any hate speech or threats are communicated in the tags/graffiti. Schools should document the graffiti with dates and pictures as they occur. This will help law enforcement if the graffiti becomes a larger problem and needs to be reported. Gang affiliation and symbols were purposefully as factors because assumptions can be made about a student and this may contribute to disproportionate minority contact.</td>
</tr>
<tr>
<td>Harassment, Nonsexual</td>
<td>Do not call law enforcement unless behavior is persistent.</td>
</tr>
<tr>
<td>Hazing</td>
<td>Do not use this term. Classify the violation based on the actual offense. Do not call law enforcement unless it is determined that a crime was committed. Like bullying, hazing can include a wide range of offenses and it is important to base the consequences on the actual violation.</td>
</tr>
<tr>
<td>Homicide</td>
<td>Call law enforcement. This is a mandated report.</td>
</tr>
<tr>
<td>Illicit/Illegal Drugs</td>
<td>Call law enforcement. Even small amounts are illegal for the school administrators to possess or dispose of, and it is mandated report.</td>
</tr>
<tr>
<td>Indecent Exposure or Public Sexual Indecency</td>
<td>Call law enforcement if there is a victim. Consult with appropriate school personnel to assess the situation.</td>
</tr>
<tr>
<td>Inhalants</td>
<td>Do not call law enforcement unless there is some proof that the student used the inhalant (e.g., caught using, can see paint marks on the nose, or other direct signs of use). TPD informed the group that it is not illegal for youth to have possession of inhalants but it is a felony to use them.</td>
</tr>
<tr>
<td>Inappropriate Language</td>
<td>Do not call law enforcement.</td>
</tr>
<tr>
<td>Kidnapping</td>
<td>Call law enforcement. This is a mandated report.</td>
</tr>
<tr>
<td>Leave School Grounds without Permission</td>
<td>Do not call law enforcement unless it is coupled with another violation or there is concern for the student’s safety.</td>
</tr>
<tr>
<td>Lying</td>
<td>Do not call law enforcement.</td>
</tr>
<tr>
<td>Minor Aggressive Act</td>
<td>Do not call law enforcement if the violation fits within this classification. If the situation escalates to assault and there is an injury, then call law enforcement.</td>
</tr>
<tr>
<td>Negative Group Affiliation</td>
<td>Do not call law enforcement.</td>
</tr>
<tr>
<td>Network Infraction</td>
<td>Do not call unless the network was hacked to access sensitive information.</td>
</tr>
<tr>
<td>Term</td>
<td>Reasoning</td>
</tr>
<tr>
<td>-------------------------------------------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>O</strong> Over the Counter Drugs</td>
<td>Do not call law enforcement for personal use, sharing, or selling. These items are not illegal, and the minor cannot be charged with any crime. If there is an emergency then call 911 for emergency assistance.</td>
</tr>
<tr>
<td><strong>P</strong> Parking Lot Violations</td>
<td>Do not call law enforcement.</td>
</tr>
<tr>
<td>Plagiarism</td>
<td>Do not call law enforcement.</td>
</tr>
<tr>
<td>Pornography</td>
<td>Do not call unless the student is distributing pornographic material, any of the materials contain someone who is known to the student (e.g., another student, a relative, etc.), or the pornography is of a minor.</td>
</tr>
<tr>
<td>Prescription Drugs</td>
<td>Do not call law enforcement for personal use with a current prescription in the student’s name. Parents should always be called to inform them of the school policy regarding any prescription drugs. Law enforcement must be called for sharing or selling prescription drugs. This is a mandated report.</td>
</tr>
<tr>
<td><strong>R</strong> Recklessness</td>
<td>Do not call law enforcement if the violation fits within this classification. If the violation is serious enough to cause physical injury or endanger someone’s life, then it should be considered endangerment.</td>
</tr>
<tr>
<td>Robbery</td>
<td>Call unless there is a low level of threat and/or force. Low levels of threat or force may be classified as extortion.</td>
</tr>
<tr>
<td><strong>S</strong> Sexual Abuse/Sexual Conduct with a Minor/Child Molestation</td>
<td>Call law enforcement. This is a mandated report.</td>
</tr>
<tr>
<td>Sexual Harassment</td>
<td>Do not call unless the behavior is persistent, or the victim feel threatened by the behavior.</td>
</tr>
<tr>
<td>Sexual Harassment with Contact</td>
<td>Call law enforcement if there was intentional contact with the penis, vagina, anus, or female breasts. There are exceptions, boys will hit other boys in the groin and girls will sometimes touch each other inappropriately for laughs. Police should be called if there is a victim or witness(es) who clearly saw sexual contact that made someone else feel uncomfortable or violated.</td>
</tr>
<tr>
<td>Sexual Assault (Rape)</td>
<td>Call law enforcement. This is a mandated report.</td>
</tr>
<tr>
<td>Simulated Firearm</td>
<td>Do not call unless they were using it to threaten others, and it cannot be discerned that it is not real.</td>
</tr>
<tr>
<td>Substance Represented as an illicit Drug</td>
<td>Do not call unless it cannot be determined if the substance is an illicit drug or not.</td>
</tr>
<tr>
<td>Term</td>
<td>Reasoning</td>
</tr>
<tr>
<td>------------------------</td>
<td>----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Tardy</td>
<td>Do not call law enforcement.</td>
</tr>
<tr>
<td>Tear Gas</td>
<td>Call law enforcement. It is not available for purchase, so the law enforcement agencies would like to be notified if someone has it.</td>
</tr>
<tr>
<td>Theft</td>
<td>Call unless the value of the items is less than $100. If it is personal property, then the victim needs to make the report, not the school.</td>
</tr>
<tr>
<td>Theft, Petty</td>
<td>Do not call law enforcement unless the value of the items is more than $100. Then it is classified as theft, not petty theft</td>
</tr>
<tr>
<td>Threat or Intimidation</td>
<td>Call law enforcement if there is intent to harm or behavior is persistent.</td>
</tr>
<tr>
<td>Tobacco</td>
<td>Do not call law enforcement.</td>
</tr>
<tr>
<td>Trespassing</td>
<td>Do not call law enforcement unless it is a student who was expelled or suspended for a serious violation, if the person has already been warned and will not leave, or if there is a specified, clear threat.</td>
</tr>
<tr>
<td>Truancy</td>
<td>Do not call law enforcement.</td>
</tr>
<tr>
<td>U</td>
<td></td>
</tr>
<tr>
<td>Unexcused Absence</td>
<td>Do not call law enforcement.</td>
</tr>
<tr>
<td>V</td>
<td></td>
</tr>
<tr>
<td>Vandalism of Personal Property</td>
<td>Do not call law enforcement because the victim must make the report, not the school.</td>
</tr>
<tr>
<td>Vandalism of School Property</td>
<td>Call unless the damage is under $250. The threshold can be higher if the school or district chooses. However, it cannot be lower; this is based on the criminal damage status.</td>
</tr>
<tr>
<td>Verbal Provocation</td>
<td>Do not call law enforcement.</td>
</tr>
<tr>
<td>W</td>
<td></td>
</tr>
<tr>
<td>Weapons:</td>
<td>Call law enforcement. This is a mandated report. However, there are times that administrators take something like a knife from a student who did not intend to bring it to campus, does not plan to use it, and has reason to be in possession of that type of weapon (for work or recreational purposes). Law enforcement agencies as well as the County Attorney do suggest considering intent. For these situations, an online report can be completed to document the incident, but it will not trigger police response to the school. The school can then give school-based consequences and law enforcement will not come to campus for a situation that was never intended to be dangerous. If there is any doubt about the intent, police should be called for police presence.</td>
</tr>

^ Mandated Report to ADE
Appendix B. Recommended Programs

From the Town Halls held to date, the RStPP Task Force has selected four approaches showing proven experience and promise, which it finds likely to be readily replicable. In selecting these, the Task Force does not intend to diminish other work being done by colleagues in law offices, courts, schools, and juvenile justice locales across the country, but rather to highlight possible starting points for further work. This preliminary report provides a summary listing; more detail will be provided in the final report and in further Town Halls and training sessions to follow. The final report will also include an expanded listing of other programs discussed by Town Hall participants.

1. Implicit Bias Training (All)

Implicit bias and its impact on the school to prison pipeline were discussed at all of the Town Halls. The research on implicit bias continues to grow. As discussed in this report, the research is increasingly clear that implicit bias is part of being human, that such bias can be measured by both social and neuroscience, and that such bias may, without intent, contribute to the kinds of disproportionality discussed in the report.

Implicit bias is an unconscious response that often is disassociated from our consciously held beliefs. Because so many decisions that impact young people along the school to prison pipeline are discretionary, openings for implicit bias to influence those decisions, albeit decisions made in all good faith, are many.

As discussed previously, research now shows that motivation to change implicit biases can help bring about change. But to be motivated, we have to first be aware of what implicit bias is and how it might operate in decisions about young people in education and juvenile justice. Training can bring about this awareness and offer possible de-biasing techniques.

More information: Professor Sarah Redfield, sarah.redfield@gmail.com, or 207-752-1721.

2. Checklist Implementation (Pima County, Arizona)

In Pima County, Arizona, under the direction of Guenevere Nelson-Melby, various stakeholders formed the Court, School, and Law Enforcement Collaborative Task Force to discuss reducing the number student referrals to law enforcement. The Task Force developed guidelines for schools and law enforcement to implement that are aimed at (a) discouraging schools from referring students to law enforcement for offenses that educators can and should handle on their own, and (b) reducing ambiguity in school conduct codes that can often times lead to racial disparities.

More information: Natalie Carrillo, Research & Evaluation Assistant, Pima County Juvenile Court Center, Tucson, AZ, natalie.carrillo@pcjcc.pima.gov; Guenevere Nelson-Melby, Pima County Public Defender, Nelsonmelby@yahoo.com.
3. Law Student/Lawyer Intervention (Sufeo, Massachusetts Model)

Massachusetts

The Massachusetts legal community has undertaken a broad approach to the issues. It is described briefly here. More information is available from Marlies Spanjaard, Director of Education Advocacy, The EdLaw Project, mspanjaard@publiccounsel.net, 617-910-5841.

Every year, the school-to-prison pipeline continues to ensnare more of our youth. This national trend of criminalizing rather than educating our nation's children is reaching a crisis point. Thousands of young people in Massachusetts become entangled in this dead-end process annually due to inadequate educational programs and zero tolerance policies and practices. Lack of educational equity can start children on a downward spiral that ends in court, or prison, and has a crippling economic effect on their families and our communities.

The EdLaw Project, a partnership between the Children's Law Center of Massachusetts and the Committee for Public Counsel Services – Children and Family & Youth Advocacy Divisions has spent the last 15 years developing expertise in providing excellent education advocacy for Massachusetts highest-risk youth. Since its formal inception in January 2000, the EdLaw Project staff of four attorneys has directly advocated for over 1,800 low-income children to receive the education they need to succeed.

The EdLaw Project is currently focusing our expertise on training, empowering, and supporting the statewide juvenile indigent defense bar to engage in effective education advocacy for court-involved youth. Long-term positive legal outcomes are difficult to achieve without a solid educational foundation and therefore we believe that representation of children on child welfare, delinquency and youthful offender cases requires effective education advocacy. We actively build the knowledge and skills of nearly one thousand attorneys, already expert child advocates in their own right, to permanently transform the standard of practice for child advocacy in Massachusetts. This approach will dramatically improve educational and life outcomes for thousands of poor children annually. Our proposed model focuses on promoting healthy child and adolescent development as a means to divert highly vulnerable children from the school-to-prison pipeline, while improving public safety and saving taxpayers millions of dollars. Our three to five year plan includes the creation of a sustainable state-funded education advocacy unit within the public defender agency to ensure ongoing leadership, training, and support of education advocacy provided by the juvenile indigent defense bar.

The school to prison pipeline cannot be shut down unless schools educate all their students. Many Massachusetts public schools are unwitting feeder systems for the courts, the Department of Children and Families (DCF), the Department of Youth Services (DYS), and adult prisons. Ill-conceived school disciplinary policies are a serious problem and there is an endemic failure to meet the academic needs of poor children, especially children of color.

Consider these statistics:
- Eighty-five percent of all juveniles who interface with the juvenile court system are functionally illiterate.
- Two thirds of children who cannot read proficiently by the end of fourth grade, will end up in jail or on welfare.
- African-American students are 3.5 times more likely than their white classmates to be suspended or expelled. Black children constitute 18 percent of students, but they account for 46 percent of those suspended more than once.
- For secondary school children, the suspension rate for black male students with disabilities is 34%, compared to 16.2% for white male students with disabilities. Black female students with disabilities have a suspension rate of 26%, while white female students with disabilities are at 7.3%.

Failing to provide young people with an adequate education has serious long-term consequences for the individual, the family, the community, and the Commonwealth, including low-wage jobs, lack of income, and prison. Undereducated parents struggle to support their families economically and struggle to advocate for the academic development of their own children. Neighborhoods with high concentrations of undereducated, chronically court-involved individuals also can be toxic environments with high rates of domestic violence, substance abuse, mental health concerns, and the resulting over-policing and over-incarceration. In Massachusetts, a high school dropout costs taxpayers an average of nearly $275,000 over his or her lifetime. Sending a young person to a correctional facility costs taxpayers upwards of $60,000 annually, and it is estimated that each youth who grows up to be ensnared in the criminal justice system will cost the taxpayer $2 to $4 million dollars.

Research shows that school success is one of the most cost effective strategies for preventing lifelong court involvement. Expert child advocates working to help parents and schools identify and access the appropriate educational services for court involved kids is not just a moral imperative; it is also a far more effective approach to issues of systemic poverty, public safety and state budget deficits, than ignoring the source of the problem and building more prisons. With the support of the education law experts at the EdLaw Project, this dedicated and skilled juvenile bar can have a profound impact on the educational, legal, and life success of thousands of poor court-involved children and youth every year and in turn, help to address economic and social disparities affecting multiple communities throughout the Commonwealth.
SUFEO Stand Up For Each Other

This program was introduced at the first Town Hall and reviewed again at the New Orleans Town Hall. It is a program that has also been adopted in Chicago.

Stand Up for Each Other! (SUFEO) is an advocacy group led by law students at Tulane University Law School and Loyola University Law School in New Orleans, with an addition project at Loyola School of Law in Chicago. The New Orleans and Chicago groups collaborate with each other but operate separately. They are united by the goal of reducing suspensions and keeping students in school and out of the criminal justice system.

For students appealing a suspension or expulsion, SUFEO advocates assist with each step of the process. They advise parents and students on how to initiate an appeal of disciplinary action, conduct an investigation into the actions taken against students, and represent students in administrative hearings. Also, both sites operate an around-the-clock hotline for youth and parents who have questions or need assistance defending against school suspensions and expulsions.

The law students that run the SUFEO groups are aided by attorneys from organizations like the Louisiana Center for Children’s Rights, which collaborates with the New Orleans SUFEO. The Center reports that SUFEO has worked with over 100 students in approximately fifty cases, most of which it says were successfully appealed. In addition to directly assisting students and parents, SUFEO’s advocacy has drawn media attention to the staggering rates of suspension and expulsion at Louisiana schools and has brought the harsh effects of state legislation into the political conversation.

For references as quoted and more information, see Stand Up For Each Other!, http://sufeo.org/

4. Restorative Justice (Texas)

In 2012, Institute for Restorative Justice and Restorative Dialogue (IRJRD), led by Dr. Marilyn Armour, partnered with Ed H. White Middle School in San Antonio, Texas, to implement a Restorative Discipline program aimed at reducing the use of exclusionary practices like suspension and expulsion to discipline sixth, seventh, and eighth grade students. Total student suspensions at the White Middle School dropped by 44% during the first year of the program and by 57% the second year. Teachers’ and administrators’ experience with, and training in, restorative practices seems positively correlated with lower suspension rates. Dr. Armour described the program as a “relational approach to building school climate and addressing student behavior that fosters belonging over exclusion, social engagement over control, and
meaningful accountability over punishment.” An evaluation of Restorative Discipline at White Middle School authored by Dr. Armour also reported “substantial gains” in academic performance; “African American students, in particular” showed improvement in both math and reading.

Dr. Armour can be reached at marmour@utexas.edu.
The references supporting the report and its recommendations are included as Endnotes.

6. See Nance, Students, Police, and the School-to-Prison Pipeline, supra note 2 (documenting data that school-based arrests have increased in several states and in several school districts throughout the country).

7. See, e.g., Fla. State Conference NAACP, Advancement Project & NAACP Legal Defense and Educ. Fund, Inc., Arresting Development: Addressing the School Discipline Crisis in Florida 6 (2006) [hereinafter Arresting Development], http://b.3cdn.net/advancement/e36d17097615e7c612_bbm6vub0w.pdf (stating that during the 2004–2005 school year, there were 26,990 school-based referrals to the Florida Department of Juvenile Justice and seventy-six percent of those referrals were for disorderly conduct, trespassing, and fighting without a weapon); Action for Children, from Push Out to Lock Up: North Carolina’s Accelerated School-to-Prison Pipeline 9–10 (2013), http://www.ncchild.org/wp-content/uploads/2014/05/2013_STPP-FINAL.pdf. (“Students were
most commonly referred to the juvenile justice system for low-level offenses.”);  

9. See U.S. Dep’t of Educ. Office for Civil Rights, supra note 5.

10. See Tony Fabelo et al., Breaking Schools’ Rules: A Statewide Study of How School Discipline Relates to Students’ Success and Juvenile Justice Involvement 37 (2011) (reporting that 97 percent of suspensions and expulsions in Texas resulted from offenses that did not require suspension or expulsion under law), https://csgjusticecenter.org/wp-content/uploads/2012/08/Breaking_Schools_Rules_Report_Final.pdf; Daniel J. Losen, Sound Discipline Policy for Successful Schools: How Redressing Racial Disparities Can Make a Positive Impact for All, in Disrupting the School-to-Prison Pipeline 45, 54-55 (Sofía Bahema et al. eds., 2012) (explaining that the vast majority of suspensions and expulsions are for minor offenses); see also Am. Bar Ass’n Juvenile Justice Comm’n, Zero Tolerance Policies: A Report 2 (2001), http://www.americanbar.org/content/dam/aba/directories/policy/2001_my_103b.authcheckdam.pdf (explaining that students have been suspended or expelled for shooting a paperclip with a rubber band or bringing a manicure kit to school); Am. Psychol. Ass’n Zero Tolerance Task Force, Are Zero Tolerance Policies Effective in Schools? An Evidentiary Review and Recommendations, 63 Am. Psychol. 852, 852 (2008) (explaining that a ten-year-old girl was expelled because her mother put a small knife in her lunchbox to cut up an apple); id. (describing that a student was expelled for talking on a cell phone to his mother who was on deployment as a soldier to Iraq and with whom he had not spoken to for thirty days).

14. See supra Figure 3; see also infra Figures 4 & 5.

15. See U.S. Dep’t of Educ. Office for Civil Rights, supra note 5, at 1–6; Losen & Gillespie, supra note 12, at 6 (finding that one out of every six Black students enrolled in K–12 public schools has been so suspended at least once, but only one out of twenty White students has been suspended).

16. U.S. Dep’t of Educ. Office for Civil Rights, supra note 5, at 6. The CRDC data is corroborated by substantial additional localized data. See Russell J. Skiba, Mariella I. Arredondo & Natasha T. Williams, More than a Metaphor: The Contribution of Exclusionary Discipline to a School-to-Prison Pipeline, 47 Equity & Excellence in Educ. 546, 550 (2014); Matthew P. Steinberg, Elaine Allensworth & David W. Johnson, Student and Teacher Safety in Chicago Public Schools: The Roles of Community Context and School Social Organization 46 (2011) (maintaining that low-performing students are less likely to be engaged in school and more likely to be frustrated and misbehave); see also Matthew P. Steinberg, Elaine Allensworth & David W. Johnson, What Conditions Support Safety in Urban Schools?: The Influence of School Organizational Practices on Student and Teacher Reports of Safety in Chicago, in CLOSING THE SCHOOL DISCIPLINE GAP: EQUITABLE REMEDIES FOR EXCESSIVE EXCLUSION 118, 125 (Daniel J. Losen ed., 2015) (explaining that low-achieving students are less likely to be engaged and more likely to act out).

20. See, e.g., Losen & Gillespie, supra note 12, at 18-21 (reviewing disproportionalit in discipline/special education by state). See generally Resolution Letter, Christian County Public Schools, U.S. Dep’t of Educ. Office for Civil Rights (Feb. 28, 2014), http://www2.ed.gov/about/offices/list/ocr/docs/investigations/03115002-a.html (finding a violation of Title VI based on different treatment against African-American students who were disciplined more frequently
and harshly than white students whose behavior was similar and whose disciplinary histories were similar or worse).

21. Kimberlé Williams Crenshaw, Black Girls Matter: Pushed Out, Overpoliced, and Underprotected 7 (2015), http://static1.squarespace.com/static/53f20d90e4b0b80451158d8c/t/54dce1ece4b001c03e323448/1423753708557/ AAPF_BlackGirlsMatterReport.pdf (“[M]uch of the existing research literature excludes girls from the analysis, leading many stakeholders to infer that girls of color are not also at risk.”); Daniel Losen et al., Are We Closing the School Discipline Gap? 30 (2015) [hereinafter Are We Closing] (“Given the high rates and extraordinarily large gaps revealed by the intersection of race and gender, we join the call for more research into the discipline gap at these intersections, as they raise questions about the possible influence of race-specific gender bias and stereotypes.”), http://civilrightsproject.ucla.edu/resources/projects/center-for-civil-rights-remedies/school-to-prison-folder/federal-reports/are-we-closing-the-school-discipline-gap/ AreWeClosingTheSchoolDisciplineGap_FINAL221.pdf.

54. Id. (emphasis added).

55. See, e.g., Catherine P. Bradshaw et al., Multilevel Exploration of Factors Contributing to the Overrepresentation of Black Students in Office Disciplinary Referrals, 102 J. Educ. Psychol. 508, 508 (2010) (finding that after controlling for teacher ratings of students’ behavior problems, African-American students were more likely than White students to be referred to the office for disciplinary reasons); LOSEN, supra note 48, at 6–7; Sean Kelly, A Crisis in Authority in Predominantly Black Schools?, 112 Tchrs. C. Rec. 1247, 1261–62 (2010) (examining data from teacher surveys and finding that when controlling for factors such as low achievement and poverty, that African-American students were no more disruptive than other students); Anna C. McFadden et al., A Study of Race and Gender Bias in the Punishment of Handicapped School Children, 24 Urb. Rev. 239, 246–47 (1992) (finding that African-American male disabled students were punished more severely
than other students for the same offenses); Russell J. Skiba et al., *Where Should We Intervene? Contributions of Behavior, Student, and School Characteristics to Out-of-School Suspension*, in *Closing the School Discipline Gap*, supra note 16, at 132–133, 134 (finding that race was a strong predictor of out-of-school suspensions); Michael Rocque & Raymond Paternoster, Understanding the Antecedents of the “School-to-Jail” Link: The Relationship Between Race and School Discipline, 101 J. CRIM. L. & CRIMINOLOGY 633, 653–54 (2011) (finding that African-American students are significantly more likely than Whites to be disciplined even after taking into account other salient factors such as grades, attitudes, gender, special education or language programs, and their conduct in school as perceived by teachers); Russell J. Skiba et al., *Race Is Not Neutral: A National Investigation of African American and Latino Disproportionality in School Discipline*, 40 Sch. Psychol. Rev. 85, 95–101 (2011) (finding significant disparities for minorities with respect to school discipline after examining an extensive national sample).

57. Russell J. Skiba & Natasha T. William, *Discipline Disparities Series Supplemental Paper I, Are Black Kids Worse? Myths and Facts about Racial Differences in Behavior: A Summary of the Literature* 3 (2014) (internal citations omitted), http://www.indiana.edu/~atlantic/wp-content/uploads/2014/03/African-American-Differential-Behavior_031214.pdf. This report continues, “Actual tests, however, have not supported the hypothesis of differential behavior. Regardless of whether the outcome variables are office disciplinary referrals at the school level, major offenses (e.g., weapons or substance use and possession) at the state level, or self-report data from national studies, controls for the extent or type of disruptive behavior have led to small and often nonsignificant changes in measured disproportionality. The fact that race remains a significant predictor of discipline after controlling for a range of disciplinary infractions strongly suggests that factors related to student behavior are not sufficient to account for racial/ethnic disparities in discipline.” *Id.* at 4.

quality teachers. Teachers in these schools routinely lack experience, qualifications, and effectiveness . . . .” (internal citation omitted)).

112. See discussion supra text accompanying notes 29-35; Steinberg, Allenworth & Johnson, Student and Teacher Safety in Chicago Public Schools, supra note 16, at 46 (maintaining that low-performing students are less likely to be engaged in school and more likely to be frustrated and misbehave); see also Steinberg, Allenworth, & Johnson, What Conditions Support Safety in Urban Schools, supra note 16, at 125 (explaining that low-achieving students are less likely to be engaged and more likely to act out).

113. Dahlberg, supra note 85, at 34 (“[T]he most critical factor in creating safe, orderly schools [is] not the presence of police, but the engagement of school administrators.”).

116. U.S. Dep’t of Educ. Office for Civil Rights, supra note 5, at 5; see infra Figure 12.

118. Aud et al., supra note 110, at 92 tbl.17a.

120. See Rachel F. Moran, Sorting and Reforming: High-Stakes Testing in the Public Schools, 34 Akron L. Rev. 107, 115 (2000) (maintaining that in a high-stakes testing context, low-performing students are in danger of being pushed out of schools).

121. For example, the now-defunct No Child Left Behind Act required schools that received federal funds to administer various academic assessments to students at different stages during grades three through twelve and imposed sanctions on schools whose students failed to meet certain standards. See Testing: Frequently Asked Questions, U.S. Dep’t of Educ., http://www2.ed.gov/nclb/accountability/ayp/testing-faq.html (last visited Jan. 6, 2016); Torin Monahan & Rodolfo D. Torres, Introduction, in Schools Under Surveillance: Cultures of Control in Public Education 5 (Torin Monahan and Rodolfo D. Torres eds., 2009). The Every Student Succeeds Act, Pub. L. 114-95, which replaced the No Child Left Behind Act on December 10, 2015, also requires states receiving federal funds to implement student academic assessments in their public schools. See id. at sec. 1111(b)(2). However, one of the hallmarks of the Every Student Succeeds Act is that it prohibits the federal government from determining the weight of those assessments for accountability purposes. See id. at sec. 1111(e)(1)(B)(iii); see also Senate Committee on Health, Education, Labor and Pensions, the Every Child Achieves Act of 2015 1, http://www.help senate.gov/imo/media/The_Every_Child_Achieves_Act_of_2015-summary.pdf (last visited Jan. 25, 2016).

(Dec. 15, 2015), http://all4ed.org/webinar-event/dec-15-2015-2/ (“Nationally, increasing the high school graduation rate to 90 percent for just one high school class – the class of 2013 for instance, or now 2015 – increasing the high school graduation rate to 90 percent for just one class would create more than 65,000 jobs.”); see also U.S. Graduation Rate, Unemployment Compared to Other Nations in Infographic, HUFFINGTON POST (June 26, 2012, 3:31 PM), http://www.huffingtonpost.com/2012/06/26/infographic-shows-how-us-_n_1628187.html.

290. See Holman & Ziedenberg, supra note 261 (explaining that formerly detained youth have less success finding employment). It is also important to recognize that once incarcerated, juveniles often do not have access to adequate education services or, worse, cannot complete their education and develop career skills to obtain employment once released. See Peter E. Leone, Doing Things Differently: Education as a Vehicle for Youth Transformation and Finland as a Model for Juvenile Justice Reform, in A NEW JUVENILE JUSTICE SYSTEM: TOTAL REFORM FOR A BROKEN SYSTEM 86, 91 (Nancy E. Dowd ed., 2015).
291. Taylor et al., Pew Research Ctr., supra note 286, at 6 (“For example, among those ages 25 to 32, fully 22% with only a high school diploma are living in poverty, compared with 6% of today’s college-educated young adults. In contrast, only 7% of Baby Boomers who had only a high school diploma were in poverty in 1979 when they were in their late 20s and early 30s.”).

293. Holman & Ziedenberg, supra note 261, at 8; Javid H. Kashani et al., Depression Among Incarcerated Delinquents, 3 Psych. Res. 185, 190-91 (1980) (demonstrating that mental health issues such as depression increased among incarcerated youth); Christopher B. Forrest et al., The Health Profile of Incarcerated Male Youths, 105 Pediatrics 286, 288-89 (2000) (finding that incarcerated males suffered from significant mental health concerns).

294. The Silent Epidemic, supra note 42, at 2; see also Don Bezruki, David Varana, and Cherry Hill, An Evaluation: Secure Juvenile Detention 4 (1999) (finding that detaining youth does not deter most juveniles and does not reduce the likelihood of recidivism); The Campaign for Educational Equity & Teachers College, Columbia University, The Social Costs of Inadequate Education (2005), http://www.tc.columbia.edu/i/a/3082_SocialCostsofinadequateducation.pdf; Holman & Ziedenberg, supra note 261, at 4; Brent B. Benda & Connie L. Tollett, A Study of Recidivism of Serious and Persistent Offenders Among Adolescents, 27 J. OF CRIM. JUST. 111, 119 (1999) (demonstrating that prior incarceration was a stronger predictor of recidivism than being neglected or abused by parents, gang membership, being with peers at the time the offense was committed, or carrying a weapon); supra Figure 31.

297. DeBaun, supra note 295.

299. Saving Futures, supra note 298; Costs of Confinement, supra note 298, at 2; Comeback States, supra note 298 (discussing states that have been successful in reducing confinement, California, Connecticut, Illinois, Ohio; Mississippi, New York, Texas, Washington, and Wisconsin); Coming-from-Behind States, supra note 298.

304. The ABA has opposed these policies. See also Am. Psychol. Ass’n Zero Tolerance Task Force, supra note 10 at 852 (explaining that a ten-year-old girl was expelled because her mother put a small knife in her lunchbox to cut up an apple); id. (describing that a student was expelled for talking on a cell phone to his mother who was on deployment as a solider to Iraq and with whom he had not spoken to for thirty days). Nor is there evidence that zero tolerance policies have made schools safer. See Advancement Project and the Civil Rights Project at Harvard University, Opportunities Suspended: The Devastating Consequences of Zero Tolerance and School Discipline Policies 14 (2000) [hereinafter Opportunities Suspended], http://civilrightsproject.ucla.edu/research/k-12-education/school-discipline/opportunities-suspended-the-devastating-consequences-of-zero-tolerance-and-school-discipline-policies/crp-opportunities-suspended-zero-tolerance-2000.pdf (stating that after four years of implementation, schools that used zero tolerance policies were less safe than those that did not use them); Arresting Development, supra note 7, at 10; Am. Psychol. Ass’n Zero Tolerance Task Force, supra note 10, at 857 (finding that “zero tolerance policies have not provided evidence that such approaches can guarantee safe and productive school climates”); Krezmien et al., supra note 122, at 274. These policies have pushed
more students out of schools and into the juvenile justice system. See Kim, Losen & Hewitt, supra note 94, at 78.

305. See Nance, Schools, Police, and the School-to-Prison Pipeline, supra note 2.

306. See discussion supra starting at note 94 regarding disproportionality in academic achievements.

307. According to Professor James Ryan, “the temptation to exclude low-performing students, enhanced by the NCLBA, can hardly be denied: One less student performing below the proficiency level increases the overall percentage of students who have hit that benchmark.” Ryan, supra note 122, at 969-70; see also NAACP Legal Defense & Educ. Fund, supra note 122, at 5 (explaining that accountability laws encourage schools to exclude students from school whom school officials believe may bring down the school’s test scores); Darling-Hammond, supra note 122, at 252 (“Perhaps the most adverse, unintended consequence of NCLB’s accountability strategy is that it undermines safety nets for struggling students rather than expanding them.”).

308. See, e.g., Fed. Advisory Comm. on Juvenile Justice, Annual Report, supra note 122, at 10; Arresting Development, supra note 7; Education Under Arrest, supra note 7, at 15 (stating that during the 2007-08 school year in Jefferson County, Alabama, ninety-six percent of students referred to juvenile court were for misdemeanors that included disorderly conduct and fighting without a weapon); Kristin Henning, Criminalizing Normal Adolescent Behavior in Communities of Color: The Role of Prosecutors in Juvenile Justice Reform, 98 CORNELL L. REV. 383, 410 (2013) (“Whereas schoolteachers, principals, and school counselors once handled school-based incidents such as fighting, disorderly conduct, and destruction of property in school, school officials now rely on local police or in-house SROs to handle even the most minor of school infractions.”).

311. See Barry C. Feld, Bad Kids: Race and the Transformation of the Juvenile Court 13 (1999) (explaining as youth crime rates increased, especially among urban African-Americans, public fear of social disorder also increased,
leading to a denouncement of coddling youth criminals); Giroux, *supra* note 309, at 561 (observing that the zero tolerance policies in schools were modeled on minimum sentencing and “three strikes” laws); Hirschfield, *supra* note 310, at 89-90; Pedro A. Noguera, *The Trouble with Black Boys: The Role and Influence of Environmental and Cultural Factors on the Academic Performance of African American Males*, 38 Urban Educ. 431 (2003). As Donna Bishop and Barry Feld describe, these violent incidents received an extraordinary amount of media attention, resulting in a “moral panic,” in which “the media, politicians, and the public reinforce each other in an escalating alarmist response that exaggerates the magnitude of the threat and produces urgent calls to ‘do something.’” Bishop & Feld, *supra* note 310, at 2770; see also Elizabeth S. Scott, “Children Are Different”: *Constitutional Values and Justice Policy*, 11 Ohio St. J. Crim. L. 71, 94 (2013) (“The hostility and fear that characterized attitudes toward young offenders in the 1990s resulted in policies and decisions driven primarily by immediate public safety concerns and the goal of punishing young criminals.”).

313. *See* Monahan & Torres, *supra* note 121, at 1, 2–3 (“[T]he threat of ‘another Columbine’ (or Virginia Tech, and so on) haunts the social imagery, leading parents, policy makers, and others to the sober conclusion that any security measure is worth whatever trade-offs are involved in order to ensure safety.”); Elizabeth S. Scott, *Miller v. Alabama and the (Past and) Future of Juvenile Crime Regulation*, 31 L. & Inequality 535, 541 (2013) (observing that although serious acts of school violence are rare events, after the Columbine shootings “legislatures across the country rushed to pass strict zero tolerance laws, making it a crime to threaten violence in school”).

315. *See* Kevin P. Brady, Sharon Balmer, & Deinya Phenix, *School-Police Partnership Effectiveness in Urban Schools*, 39 Educ. & Urban Soc. 455, 456 (2007) (“An increasing fear of school violence coupled with the public’s misperceptions of the actual degree of violence in our nation’s schools has caused school officials, especially those located in urban areas, to implement more punitive-based school discipline policies and practices for responding to and preventing student crime and violence.”).

318. According to the Community Oriented Policing Services (COPS) program and the Safe and Drug Free Schools and Community Act, a SRO is a “career law enforcement officer, with sworn authority, deployed in community-oriented policing, and assigned by the employing police department or agency to work in schools and community-based organizations.” 42 U.S.C. § 3796dd-8 (2012); 20 U.S.C. § 7161 (2012). SROs typically are sworn police officers employed by the police department and assigned to work in schools full-time, but in larger jurisdictions such as Los Angeles or Houston, SROs might be employed by the school districts. See Catherine Y. Kim & I. India Geronimo, ACLU, Policing in Schools: Developing a Governance Document for School Resource Officers in K–12 Schools 5 (2009).

319. See James & McCallion, supra note 317, at 2; Raymond, supra note 317, at 1; Krezmien et al., supra note 122, at 275; Theriot, supra note 309, at 281.

320. See Brady, Balmer & Phenix, supra note 315, at 457; Hirschfield & Celinska, supra note 317, at 1.

322. Id.; see also Theriot, supra note 309, at 281 (“While it is difficult to know the exact number of school resource officers, it is estimated that there might be more than 20,000 law enforcement officers patrolling schools in the United States.”).

323. James & McCallion, supra note 317, at 5, fig. 1.

326. See Brown, supra note 325, at 592; A Snapshot of Legislative Action, supra note 325, at 1-2.

327. See Brown, supra note 325, at 592; A Snapshot of Legislative Action, supra note 325, at 1-2; see also Kim & Geronimo, supra note 318, at 5 (explaining that SROs are sworn police officers typically employed by the police department and assigned to work in schools full-time, but in larger jurisdictions such as Los Angeles or Houston, SROs might be employed by the school districts).

329. Id.

330. Id. The average minimum salary for an entry-level police officer is $32,412. Id.

333. See JAMES & MCCALLION, supra note 317, at 10-11; RAYMOND, supra note 317, at 5; Brown, supra note 325, at 591; Theriot, supra note 309, at 280. In 2002, the U.S. Department of Justice sponsored a survey of school principals nationwide to ascertain the reasons why schools established SRO programs. See LAWRENCE F. TRAVIS III & JULIE KIERNAN COON, CTR. FOR CRIM. JUST. RESEARCH, THE ROLE OF LAW ENFORCEMENT IN PUBLIC SCHOOL SAFETY: A NATIONAL SURVEY (2005), https://www.ncjrs.gov/pdffiles1/nij/grants/211676.pdf. The responses were mixed. Principals indicated that “national media attention about school violence” (24.5%) and “disorder problems (e.g., rowdiness, vandalism)” (17.5%) were the reasons behind establishing the program. Id. at 35. Interestingly, the most common response was “other,” which included reasons such as receiving a grant, “part of community policing,” “part of a drug awareness program,” “to improve school safety,” and “to build relationships with students.” Id. at 84. Only 3.7% of respondents indicated that the level of violence in the school was the reason for establishing an SRO program. Id.

334. See JAMES & MCCALLION, supra note 317, at 9; Brown, supra note 325, at 592 (observing that despite the enormous expense associated with SRO programs, it is not clear whether SROs enhance student safety); Theriot, supra note 309, at 280.

335. JAMES & MCCALLION, supra note 317, at 10; Theriot, supra note 309, at 280 (“Empirical evaluations of these various security strategies are limited, have varying levels of methodological rigor, and often report conflicting findings.”) (internal citations omitted). Another summary of the research on the effectiveness of SRO programs states: “Studies of SRO effectiveness that have measured actual safety outcomes have mixed results. Some show an improvement in safety and a reduction in crime; others show no change. Typically, studies that report positive results from SRO programs rely on participants’ perceptions of the effectiveness of the program rather than on objective evidence. Other studies fail to isolate incidents of crime and violence, so it is impossible to know whether the positive results stem from the presence of SRO programs or are the results of other factors.” RAYMOND, supra note 317, at 8. See also BENJAMIN W. FISHER & EMILY A. HENNESSY, SCHOOL RESOURCE OFFICERS AND EXCLUSIONARY DISCIPLINE IN U.S. HIGH SCHOOLS: A SYSTEMATIC REVIEW AND META-ANALYSIS, ADOLESCENT RES. REV. 1, 1 (2015) (presenting results of meta-analyses on impact of SROs).

336. See Brown, supra note 325, at 592 (lamenting that such little attention has been devoted to measuring the impact SROs have on the school environment); Theriot, supra note 309, at 281 (observing that the research on SROs rarely discusses criminalization of school discipline or provided data about arrests).

337. See Paul Hirschfield, SCHOOL SURVEILLANCE IN AMERICA, IN SCHOOLS UNDER SURVEILLANCE, supra note 121, at 38, 46 (observing that strict security measures are
“a frequent cause of disunity or discord within the school community”); Randall R. Beger, The “Worst of Both Worlds”: School Security and the Disappearing Fourth Amendment Rights of Students, 28 CRIM. JUST. REV. 336, 340 (2003) (concluding that “aggressive security measures produce alienation and mistrust among students”); Ending the School-to-Prison Pipeline: Hearing Before the S. Comm. on the Judiciary, Subcomm. On the Constitution, Civil Rights, and Human Rights, 112th Cong. 1–4 (2012) (testimony of Edward Ward, Blocks Together, Dignity in Schools Campaign), http://www.judiciary.senate.gov/imo/media/doc/12-12-12WardTestimony.pdf (describing his school environment as “very tense,” “antagonizing,” and “disheartening,” where “the halls were full with school security officers whose only purpose seemed to be to serve students with detentions or suspensions”); cf., Tom R. Tyler & Lindsay E. Rankin, Legal Socialization and Delinquency in The Oxford Handbook of Juvenile Crime and Juvenile Justice, supra note 256, at 361 (observing that “surveillance systems have deleterious effects on the social climate of groups because their use implies distrust, which decreases people’s ability to feel positively about themselves, their groups, and the system itself”).

338. See Clifford H. Edwards, Student Violence and the Moral Dimensions of Education, 38 PSYCHOL. SCHS. 249, 250 (2001) (stating that “intrusive strategies are likely to undermine the trust needed to build cooperative school communities capable of really preventing violence”); Pedro A. Noguera, Preventing and Producing Violence: A Critical Analysis of Responses to School Violence, 95 HARV. EDUC. REV. 189, 190-91 (1995) (observing that the “get tough” approach undermines school safety because coercive measures create mistrust and resistance among students); Matthew J. Mayer & Peter E. Leone, A Structural Analysis of School Violence and Disruption: Implications for Creating Safer Schools, 22 EDUC. & TREATMENT CHILD. 333, 350, 352 (1999) (finding that student disorder and student victimization were higher in schools using strict security measures); Steinberg, Allensworth, & Johnson, What Conditions Support Safety in Urban Schools?, supra note 16, at 127-29 (finding that students and teachers reported lower levels of perceived safety in schools that had higher suspension rates, even after controlling for community and contextual variables).

340. See Nance, supra note 5, at 35-47.

341. See id. (describing and analyzing this empirical study).

342. See Theriot, supra note 309, at 282.

343. Id. at 284-85.

345. See Brown, supra note 325, at 591; DOJ FERGUSON, supra note 339, at 37-38.
346. See Theriot, supra note 309, at 281; James & McCullion, supra note 317, at 2. According to the COPS program an SRO’s duties include the following: (A) to address crime and disorder problems, gangs, and drug activities affecting or occurring in or around an elementary or secondary school; (B) to develop or expand crime prevention efforts for students; (C) to educate likely school-age victims in crime prevention and safety; (D) to develop or expand community justice initiatives for students; (E) to train students in conflict resolution, restorative justice, and crime awareness; (F) to assist in the identification of physical changes in the environment that may reduce crime in or around the school; and (G) to assist in developing school policy that addresses crime and to recommend procedural changes. 42 U.S.C. § 3796dd-8(4) (2012).

347. Interestingly, the SRO handbook developed by COPS provides an example of an SRO who “once had to threaten to arrest a principal for interfering with a police officer in the performance of his duty when the administrator was physically barring [the SRO] from arresting a student,” reminding SROs that they have the power to arrest students over the objections of school officials. Peter Finn et al., U.S. Dep’t of Just., Office of Cmty. Oriented Policing Servs., A Guide to Developing, Maintaining, and Succeeding with Your School Resource Officer Program 51 (2005), http://www.popcenter.org/Responses/school_police/PDFs/Finn_et_al_2005.pdf.

352. Brown, supra note 325, at 591.

353. This does imply that teachers and school officials do not need more training in these areas. In fact, as previously noted, too many school officials and teachers rely too heavily on overly-punitive disciplinary methods. It is critical for school officials and teachers to become aware of and support using alternative methods to create safe, supportive learning environments. See Nance, Dismantling the School-to-Prison Pipeline: Tools for Change, supra note 2.

354. Brown, supra note 325, at 592.
355. Id.; DOJ Ferguson, supra note 339, at 8. Of course, this does not imply that educators or school officials always use their training well. In fact, over the last few decades many teachers and school officials have adopted a punitive mindset to discipline children that may also contribute to the Pipeline. See supra text and discussion at note 308.

357. DOJ Ferguson, supra note 339, at 38.

358. Some of this part is taken from Professor Redfield’s work on the American Bar Association’s Achieving an Impartial Jury: Addressing Bias in Voir Dire and Deliberations project, which can be viewed at http://www.americanbar.org/groups/criminal_justice/voir_dire.html, and from various of her presentations, all on file with the author. See, e.g., Sarah E. Redfield, Professor of Law, Presentation to the Nebraska State Bar Association: Understanding Implicit Bias to Gain Justice & Equal Opportunity (Oct. 2015); Sarah E. Redfield & Bernice B. Donald, Joint Training to the Warren County Department of Human Services: Implicit Bias & the School-to-Prison Pipeline (May 2015): Sarah E. Redfield & Jason Nance, Joint Training to the Warren County Department of Human Services: Implicit Bias & the School-to-Prison Pipeline (May 2015).

359. See supra text and discussion accompanying notes 29-35.

360. This is not to say that explicitly held views are not part of the problem.
361. See, e.g., van den Bergh, et al., supra note 40, at 518; McIntosh, Girvan, Horner & Smolkowski, supra note 35, at 6 (explaining that conscious or unconscious bias is an important factor in the discipline gap); L. Song Richardson, Police Efficiency and the Fourth Amendment, 87 Ind. L.J. 1143, 1146-47 (2012) (explaining that individuals have nonconscious reactions to others that negatively influences their decisions and behaviors to those individuals); see also Cynthia Lee, Making Race Salient: Trayvon Martin and Implicit Bias in a Not Yet Post-Racial Society, 91 N.C. L. Rev. 1555, 1570 (2013) (“Despite our largely egalitarian attitudes and beliefs, social science research over the past decade has shown that a majority of Americans are implicitly biased against Blacks.”).

364. See Ernesto Reuben, Paola Sapienza & Luigi Zingales, How Stereotypes Impair Women’s Careers in Science, 111 Proc. Nat’l Acad. Sci. 4403 (2014) (showing that employers will choose a male employee over a female employee for a job requiring arithmetic skills even where actual task results show the female with better test scores).

371. Project Implicit, https://implicit.harvard.edu/implicit/ (last visited Jan. 10, 2016). There are other implicit association tests available online such as fat/thin, elderly/young, skin color. See About, Project Implicit, https://implicit.harvard.edu/implicit/iatdetails.html (last visited Jan. 10, 2016); Leslie Ashburn-Nardo, Presentation, The Implicit Association Test: Its Uses (and

375. See generally STAATS, supra note 40, at 24-26 (providing an overview of the IAT approach).

377. See, e.g., Emily L. Fisher & Eugene Borgida, Intergroup Disparities and Implicit Bias: A Commentary, 68 J. SOC. ISSUES 385, 396 (2012) (“Taken together, the research included in this terrific special issue represents a strong body of evidence in support of the claim that implicit biases are contributing to an understanding of ongoing real-world disparities. As such, we believe that implicit bias research will continue to play a crucial role in understanding and hopefully reducing these aggregate-level disparities as they surface in employment, legal, and health care domains.”).
378. See, e.g., id. (summarizing criticism and response to criticism and noting that “[r]egardless of any debate over IAT validity, the broader point that is often lost amidst the methodological and ideological cacophony is that considerable implicit bias research goes beyond the IAT and uses methods that have been regarded with less criticism. . . . using these types of techniques also finds that implicit bias predicts a variety of behavioral outcomes in intergroup domains”); Justine E. Tinkler, Controversies in Implicit Race Bias Research, 6 Soc. Compass 987 (2012).

383. See discussion infra notes 399-402 and accompanying text.

392. 42 U.S.C.S. § 5633(a)(22) (Lexis 2014) (requiring state plans to “address juvenile delinquency prevention efforts and system improvement efforts designed to reduce, without establishing or requiring numerical standards or quotas, the disproportionate number of juvenile members of minority groups, who come into contact with the juvenile justice system”).

395. See Dear Colleague Letter, supra note 4; Comm. on Educ. and the Workforce, U.S. House of Representatives, Letter to Arne Duncan, Secretary, U.S. Dep’t of Educ. & Eric Holder, Attorney Gen., U.S. Dep’t of Justice (Feb.12, 2014) (on file with author) (criticizing the Department’s Dear Colleague Letter and preferring local interventions).

396. See Elizabeth N. Jones, Disproportionate Representation of Minority Youth in the Juvenile Justice System: A Lack of Clarity and Too Much Disparity among States “Addressing” the Issue, 16 U.C. Davis J. Juv. L. & Pol’y 155, 159 (2012) (“Interestingly, of the four ‘core’ areas of JJDPA concern, it is this section – the only one implicating race as a concerning factor – that has not produced results of consequence.”); see also Reforming Juvenile Justice, supra note 86, at 130, 205 (emphasizing the importance of fairness and perceived fairness).

398. Indeed, each of us knows of at least one school that beat the odds, one student who became a poster child for beating the odds; one program that can show results in terms of student success. The search also reveals an interesting trend toward programs that are focused not only on closing the achievement gap (academic) but also on closing cultural gaps.

399. Virginia Valian, Why So Slow?: The Advancement of Women (1999) (asking this very question and discussing women in academia but equally applicable to other settings).

400. See discussion supra notes 376, 380, and 382 and accompanying text.

401. Project Implicit, supra note 371.

402. See discussion supra note 369 and accompanying text.

403. Disability IAT Results: Feedback, Project Implicit, https://implicit.harvard.edu/implicit/ (last visited Jan. 14, 2016). While research concerning implicit bias in favor of the abled and against the disabled is less developed than the research on race, this is one of the strongest and widely held of biases. See Nosek et al., supra note 372, at 36; see also Mark E. Archambault et al., Utilizing Implicit Association Testing to Promote Awareness of Biases Regarding Age and Disability, 19 J. Physician Assistant Educ. 20 (2008) (discussing health care providers and suggesting a link between implicit bias and clinical decision making including IAT results for medical students biased toward abled).

406. Black-White IAT Results: Feedback, Project Implicit, https://implicit.harvard.edu/implicit/Study;jsessionid=8760807505217DD039F6B457199FA0A6.dev2?tid=0 (last visited Jan. 14, 2016). The remaining percent score shows preference in neither direction. The bias is more dominant in White test takers, but some Blacks also show pro-White results, though in a more nuanced way. Project Implicit reports that “Data collected from this website consistently reveal approximately even numbers of Black respondents showing a pro-White bias as show a pro-Black bias. Part of this might be understood as Black respondents experiencing the similar negative associations about their group from experience in their cultural environments, and also experiencing competing positive associations about their group based on their own group membership and that of close relations.” See also Elizabeth A. Phelps, Julius Silver Professor of Psychology and Neural Science, N.Y. Univ., Presentation at the Macarthur Neuroscience and the Law Conference: Race Bias, Decisions, and the Brain (Apr. 27, 2013).

409. See discussion supra at note 363 and accompanying text.

410. See, e.g., Nosek, supra note 381, at 152.

White observers are quicker to observe anger in ambiguously hostile African-American faces than in White); see also Kurt Hugenberg & Galen V. Bodenhausen, *Ambiguity in Social Categorization: The Role of Prejudice and Facial Affect in Race Categorization*, 15 Psychol. Sci. 342 (finding that hostility influences categorization of racially ambiguous faces).

414. See Birt L. Duncan, *Differential Social Perception and Attribution of Intergroup Violence: Testing the Lower Limits of Stereotyping of Blacks*, 34 J. Personality & Soc. Psychol. 590, 596-97 (1976) (describing research involving viewing a video of an ambiguous shove where white observers were much quicker to call the shove violent where performed by a Black than by a White); Justin D. Levinson, *Forgotten Racial Equality: Implicit Bias, Decisionmaking, and Misremembering*, 57 Duke L.J. 345, 394, 399-401 (2007) (finding that when participants read two short stories, with some participants assigned to the story with the protagonist with a typically African-American name, Tyrone, some to stories with a typically Hawaiian name, Kawika, and some to stories with typically White name, William, they recalled facts from the stories such that Tyrone and Kawika were more aggressive with fewer mitigating factors than William); see also Charles Ogletree, Robert J. Smith & Johanna Wald, *Criminal Law: Coloring Punishment: Implicit Social Cognition and Criminal Justice*, in *Implicit Racial Bias Across the Law* 45 (Justin D. Levinson & Robert J. Smith eds., 2012).

415. See discussion supra at notes 440-465 and accompanying text.

416. See discussion supra at note 361, 28-35 and accompanying text.

418. Culture is also described as shared meanings and shared language or representational communications. See id.

420. Merlin Donald, *How Culture and Brain Mechanisms Interact in Decision Making, in Better than Conscious? Decision Making, the Human Mind, and Implications for Institutions* 191 (Christoph Engel & Wolf Singer eds., 2008) (“The human brain does not acquire language, symbolic skills, or any form of symbolic cognition without the pedagogical guidance of culture and, as a result, most decisions made in modern society engage learned algorithms of thought that are imported from culture.”).

423. Henri Tajfel, Experiments in Intergroup Discrimination, SCI. AM., Nov. 1970, at 96 (showing this group loyalty occurs even if factors that put you in a group are random and arbitrary, that is, the very act of categorization may be enough to create an in-group preference).

425. It is not always thus. See, e.g., Brown v. Bd. of Educ., 347 U.S. 483, 495 n.11 (1954) (referencing Dr. K. B. Clark’s work studying the response of African-American children to white dolls about which he testified, “[t]he conclusion which I was forced to reach was that these children in Clarendon County, like other human beings who are subjected to an obviously inferior status in the society in which they live, have been definitely harmed in the development of their personalities; that the signs of instability in their personalities are clear, and I think that every psychologist would accept and interpret these signs as such.” Richard Klueger, Simple Justice (1975)); Gordon J. Beggs, Novel Expert Evidence in Federal Civil Rights Litigation, 45 AM. U. L. REV. 1 (1995) (discussing social science evidence of African-American children's preference for white dolls); see also Emily Falk & Matthew B. Lieberman, The Neural Bases of Attitudes, Evaluation, and Behavior Change, in The Neural Basis of Human Belief Systems 7-8 (Frank Krueger & Jordan Grafman eds., 2013).

426. See Nilanjana Dasgupta, Implicit Ingroup Favoritism, Outgroup Favoritism, and Their Behavioral Manifestations, 17 SOC. JUSTICE RES. 143 (2004); Charles W. Perdue et al., supra note 422, at 478-79, 482-84 (explaining that we view in-group members as more competent, cooperative, confident, independent, intelligent, warmer, more affirming, tolerant, good-natured, sincere, and more concerned with group goals); Pettigrew & Tropp, supra note 376, at 751; see also Croft & Schmader, supra note 32, at 1143 (suggesting that differing in-category standards may result in higher grades from the out-group).

428. See, e.g., Brian A. Nosek et al., supra note 369, at 265.
429. Compare Littisha E. Bates & Jennifer E. Glick, Does It Matter If Teachers and Schools Match the Student? Racial and Ethnic Disparities in Problem Behaviors, 42 Soc. Sci. Res. 1180, 1182, 1187 (2013) (answering in the affirmative whether “teacher-student racial/ethnic matches result in evaluations of student behaviors that are different from instances in which children are taught and assessed by a teacher from outside their racial or ethnic group”), with Geert Driessen, Teacher Ethnicity, Student Ethnicity, and Student Outcomes, 26 Intercultural Educ. 179, 188 (2015) (“The conclusion seems justified that there is as yet little unambiguous empirical evidence that a stronger degree of ethnic match be it in the form of a one-to-one coupling of teachers to students with the same ethnic background, or a larger share of minority teachers at an ethnically mixed school, leads to predominantly positive results. Insofar favorable effects were found, they apply to a greater extent to subjective teacher evaluations than to objective achievement outcome measures.”).

430. See generally, e.g., Reeves, Written in Black & White, supra note 366 (showing implicit bias in evaluation of law associate writing); Chris C. Goodman & Sarah E. Redfield, A Teacher Who Looks Like Me, 27 J. Civ. Rts. & Econ. Dev. 105 (2013) (discussing issues where teaching force differs from student body); Sarah E. Redfield & Theresa Kraft, What Color is Special Education, 41 J. L. & Educ. 129 (2012).

431. See Bates & Glick, supra note 429, at 1188; Charles W. Perdue et al., supra note 422, at 478-79, 482-84; see also William Peters, A Class Divided: Then and Now (1987).

434. They may also be explicitly racist. See, e.g., Julio Cammarota, Misspoken in Arizona: Latina/o Students Document the Articulations of Racism, 47 Equity & Excellence Educ. 321, 324 (citing as examples of explicit addressing an “African American young male by calling him ‘boy,’ or telling a student that he or she derives from a racial background in which ‘intelligence’ is an uncommon trait”).

435. See, e.g., Stephen Young, Micromessaging: Why Great Leadership Is Beyond Words (2006); Dávila, supra note 27, at 458 (describing “disregard” as a microaggression).

Study Says, Huffington Post (Jan. 12, 2015, 5:22 PM), http://www.huffingtonpost.com/2015/01/12/microaggressions-college-racism-sexism_n_6457106.html (“[D]iscrimination, often manifested in what are called ‘microaggressions,’ creates unwelcoming environments and can be detrimental to academic performance . . . .”).

439. See discussion infra starting at note 441.

441. See, e.g., STACY A. HARWOOD ET AL., RACIAL MICROAGGRESSIONS AT THE UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN: VOICES OF STUDENTS OF COLOR IN THE CLASSROOM 1 (2015), http://www.racialmicroaggressions.illinois.edu/files/2015/03/RMA-Classroom-Report.pdf (“Over half of participants (51 percent) reported experiences of stereotyping in the classroom. About a third (27 percent) of the students of color reported feeling that their contributions in different learning contexts were minimized and that they were made to feel inferior because of the way they spoke. Additionally, a quarter (25 percent) of students of color reported feeling that they were not taken seriously in class because of their race.”); Dávila, supra note 27, at 455 (describing low expectations as a form of microaggression); Goodman & Redfield, supra note 430, at 133-34 (discussing cumulative messaging).

458. See, e.g., id.; McGlone, supra note 456.

460. See Nancy H. Murri, Kathleen King, & Dalia Rostenberg, Reducing Disproportionate Minority Representation in Special Education Programs for

461. Frederick L. Smyth et al., Implicit Gender-Science Stereotype Outperforms Math Scholastic Aptitude in Identifying Science Majors 1, 10 (2009), http://projectimplicit.net/nosek/papers/SGN2010gensci.pdf (reporting that “implicit stereotyping was more strongly related to majoring in STEM than was SAT-math performance,” showing a “potent link between implicit stereotyping and scientific self-concept”). Perhaps even more concerning is their conclusion: “Remarkably, the negative correlation of implicit stereotyping with women’s choices of STEM majors was as powerful for the most mathematically-able women as for the least.” Id. at 8.

462. See generally, e.g., Burns, Parker & Monteith, supra note 408, at 21-22; Patricia G. Devine et al., Long-Term Reduction in Implicit Bias: A Prejudice Habit-Breaking Intervention, 48 J. Experimental Soc. Psychol. 1267 (2012) (describing successful training).

463. See, e.g., Devine et al., supra note 462, at 1267. Patricia G. Devine et al., The Regulation of Explicit and Implicit Race Bias: The Role of Motivations to Respond Without Prejudice, 82 J. Personality & Soc. Psychol. 835 (2002); Kerry Kawakami, John F. Dovidio & Simone van Kamp, The Impact of Counterstereotypic Training and Related Correction Processes on the Application of Stereotypes, 10 GROUP PROCESSES & INTERGROUP RELATIONS 139, 139 (2007) (“In General, The Results Of The Present Research Support The hypothesis that correction is a deliberate and calibrated process that people use strategically to compensate for undesired external influence.”). The research is still coming in on what may or may not be effective. For example, there is caution about potential “backlash” from use of the IAT. See, e.g., Jacquie D. Vorauer, Completing the Implicit Association Test Reduces Positive Intergroup Interaction Behavior, 23 Psychol. Sci. 1168-75 (2012) (finding that White participants’ taking race-based IAT led to their non-White (Aboriginal) partners feeling less well regarded than after interactions after a non-race-based IAT); see also Jennifer K. Elek & Paula Hannaford-Agor, First, Do No Harm: On Addressing the Problem of Implicit Bias in Juror Decision Making, 49 Ct. Rev. 190-99 (2013) (suggesting that mock jurors who were given the implicit bias instruction responded to it in “subtle ways” although the instruction did not produce any backfire or harmful effect); Margo J. Monteith, Jill E. Lybarger & Anna Woodcock, Schooling the Cognitive Monster: The Role of Motivation in the Regulation and Control of Prejudice, 3 Soc. & Personality Psychol. Compass 211 (2009) (discussing motivation); Jessi L. Smith, et al., Now Hiring! Empirically Testing a Three-Step Intervention to Increase Faculty Gender Diversity in STEM, 65 BIOSCI. 1084 (2015) (describing successful training regarding faculty STEM hiring).
